

## **Fugitive Dust Suppression Plan**

Kerr McGee Gathering LLC commits to the following fugitive dust suppression Best Management Practices during and after the construction of the Conoco Mustang Pipeline:

- During construction, water trucks will be used to maintain dust and fugitive particulate suppression.
- The disturbed area of the pipeline route will be maintained during construction by Kerr McGee Gathering LLC in a manner that controls soil erosion, dust, and the growth and spread of noxious weeds. Construction best management practices (BMPs) and erosion and sedimentation controls will be employed.
- After construction has been completed the disturbed areas of the right-of-way will be re-seeded as defined in the surface owner agreements.
- Activities will comply with the Colorado Air Quality Commission's air quality regulations.
- Erosion and sediment controls will be maintained during construction to mitigate soil erosion. The disturbed areas of the route will be restored as soon as possible following construction to avoid soil exposure.

Note: Due to the minimal size of the project, air quality effects will be negligible and there will no permanent significant change in visual impact from present conditions. Water quality and quantity will not be compromised.
