I. INTRODUCTION

Green Valley Ranch East Filing 7 consists of 327 single family detached residential dwelling units, to be developed within the Green Valley Ranch East master plan. As shown on **Figure 1**, the site is located in the northeast quadrant of the Picadilly Road/38th Avenue (future alignment) in Aurora, Colorado. Filing 7 would have vehicular access via connection to Picadilly Road at 42nd Avenue (full-movement) and 40th Place (¾-movement); to 38th Avenue via Riviera Court (right-in/right-out) and Tibet Street, via 42nd Avenue and 39th Avenue (both full-movement). **Figure 2** depicts the current site plan concept.

Four previous traffic analyses have been conducted for Green Valley Ranch East, as documented in the following reports:

- *Transportation Analysis, Green Valley Ranch East, Felsburg Holt & Ullevig, July 2018.*
- *Green Valley Ranch East CSP 1, Active Adult Residential, Traffic Impact Study, Felsburg Holt & Ullevig, August 2018.*
- *Traffic Impact Study, Green Valley Ranch East CSP 2, Felsburg Holt & Ullevig, September 2018.*
- *Traffic Impact Study, Green Valley Ranch East CSP 3, January 2019.*

By incorporating the above documents, as well as more recent analyses conducted within the surrounding area, this traffic study identifies the potential impacts specific to the Filing 7 development at Green Valley Ranch East and identifies the resultant roadway and traffic control improvements required. Both Short-Range (year 2025) and Long-Range (year 2040) planning horizons were evaluated for the site.

II. EXISTING CONDITIONS

II.A. Roadways

The primary existing study area includes:

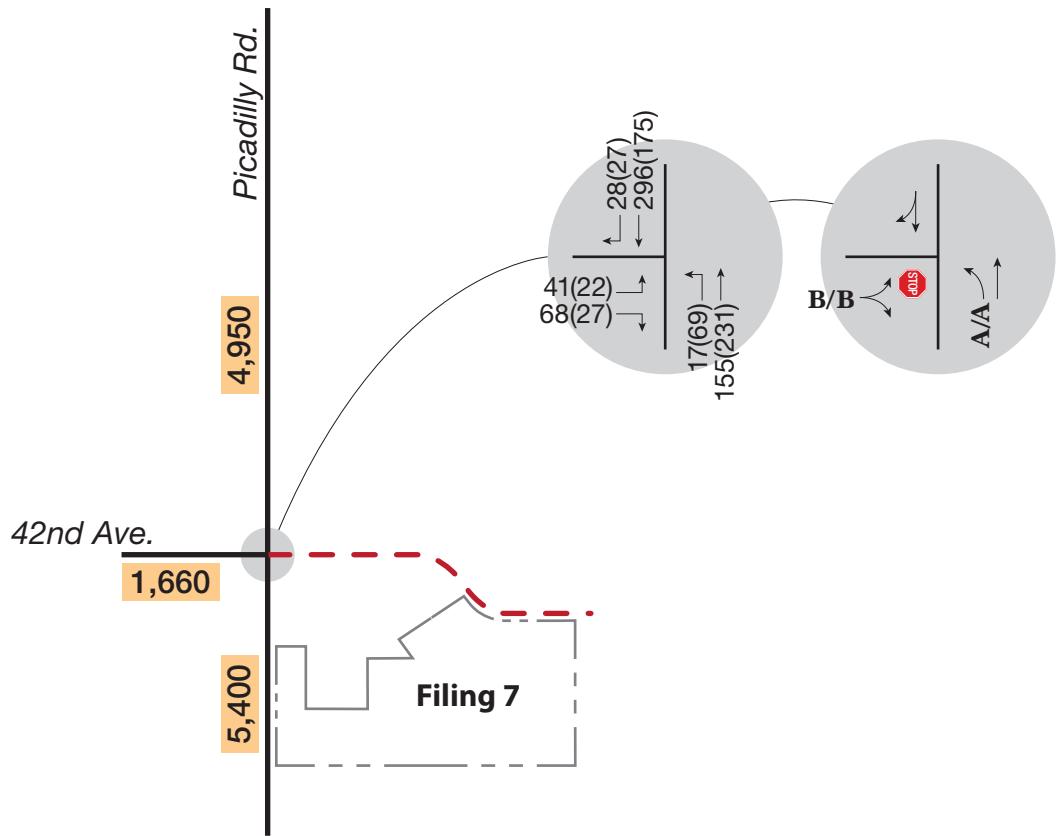

- **Picadilly Road.** This north-south roadway extends along the west side of the Filing 7 single family residential site. The roadway consists of a basic two-lane cross section with a striped center median area to provide left-turn lanes at intersections. The posted speed limit is 40 miles per hour (MPH). The City of Aurora's NEATS identifies Picadilly Road as a future six-lane arterial.
- **42nd Avenue.** This east-west collector roadway extends west from Picadilly Road into the City and County of Denver, posted with a 25 MPH speed limit. East of Picadilly Road, the roadway is planned to be extended to intersect the future Tibet Road. The intersection of 42nd Avenue and Picadilly Road is currently unsignalized, with STOP sign control on the eastbound approach.

II.B. Traffic Volumes and Operations

Weekday 72-hour automated roadway traffic counts were recently conducted on Picadilly Road and 42nd Avenue, from which average daily traffic volumes were calculated. Turning movement counts, previously conducted for the CSP 3 analysis, were used to develop AM and PM peak hour turning movements for the intersection. **Appendix A** contains the count data.

Figure 3 depicts the existing traffic volumes. As shown, Picadilly Road currently serves approximately 5,400 vehicles per day (VPD) adjacent to the site.

Level of Service (LOS) is a qualitative measure of traffic operational conditions, based on roadway capacity and motorist delay. The *6th Edition Highway Capacity Manual* defines six levels of service, ranging from A to F, with LOS A representing the best possible operating conditions and LOS F representing over-capacity, or congested conditions. In developed areas, LOS D is typically considered to be acceptable for peak hour traffic operations. **Figure 3** includes the existing intersection geometrics, traffic control, and intersection LOS results; and **Appendix B** contains Synchro LOS worksheets. As indicated, existing traffic operations at the intersection of Picadilly Road and 42nd Avenue are acceptable, at LOS B or better during peak times.

- = Future Roadway

III. PROPOSED FUTURE CONDITIONS

III.A. Trip Generation

As previously noted, the planned residential uses within Filing 7 would consist of 327 single family residential units. The proposed development is in general conformance with the planning data previously used for the *Transportation Analysis, Green Valley Ranch East* master report. The trip generation analysis, summarized in **Table I**, was conducted using the fitted curve equations contained in *Trip Generation*, 10th Edition, Institute of Transportation Engineers (ITE), 2017.

Table I. Green Valley Ranch East Filing 7 Trip Generation Analysis

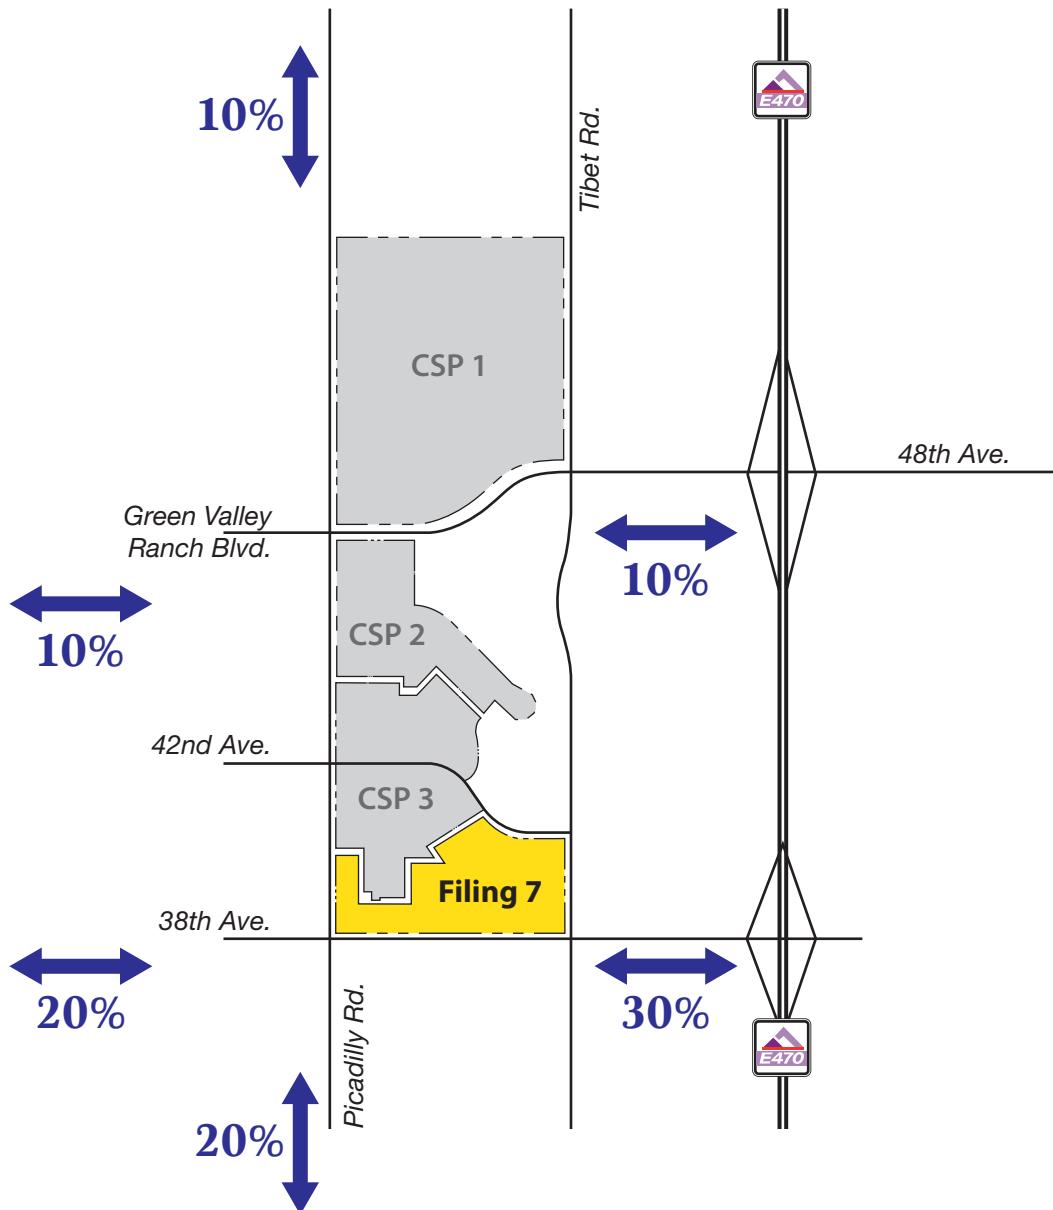

Land Use	Quantity	Daily	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Single Family Residential (I)	327 DU	3100	60	175	235	200	115	315
I. ITE Land Use Code 210 Single Family Detached Housing. Fitted curve equations applied.								

As shown in the table, Filing 7 would have a trip generation potential of about 3,100 trips per day, with 235 AM peak hour trips and 315 PM peak hour trips.

III.B. Site Trip Distribution and Site-Generated Traffic Assignment

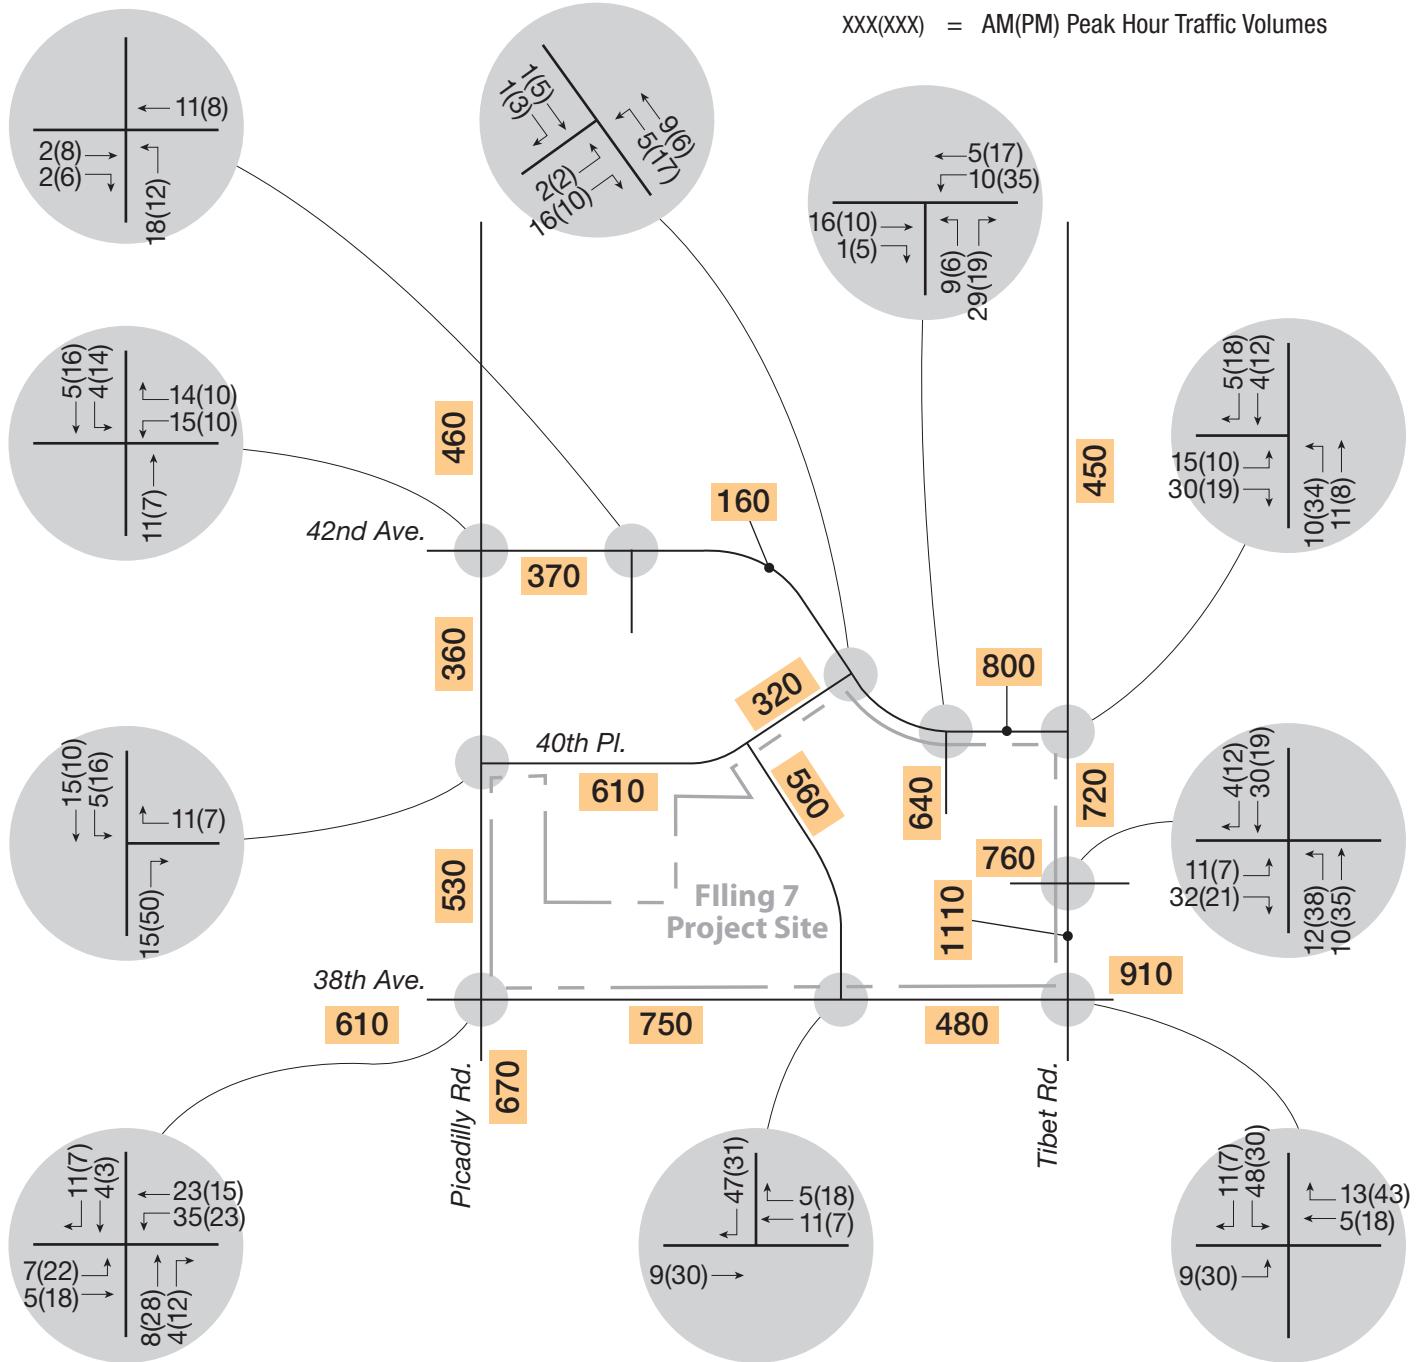

For both future scenarios, it is projected that the adjacent study area roadway system would be built, including the planned E-470 interchanges at 38th Avenue and at Green Valley Ranch Boulevard (48th Avenue). Tibet Road is expected to be constructed between 38th Avenue and 48th Avenue. The trip distribution, as depicted on **Figure 4**, is based on the location of the site relative to regional connections as well as travel pattern results from the City's recently updated NEATS model.

Figure 5 shows the resultant site-generated traffic associated with the proposed Filing 7 development. As shown, Picadilly Road would carry 360 to 670 VPD in site-related volumes. 38th Avenue would carry 480 to 910 VPD, and Tibet Road would carry about 450 VPD north of the site to about 1,110 VPD immediately north of 38th Avenue.

FIGURE 5

Site Generated Traffic Assignment

IV. FUTURE CONDITIONS

IV.A. Background Traffic Volumes

Short Range (2025)

For the Short-Range Future scenario (year 2025), background volumes were based on the following:

- Other Green Valley Ranch East development per the Final Development Plan (FDP), and the CSP 1, CSP 2, and CSP 3 Traffic Impact Studies.
- Development of Project Peak, per the Traffic Impact Study for this site dated April 2019, by Kimley-Horn and Associates, Inc.
- Background growth of existing traffic using a 2 percent annual growth rate.
- Traffic shifts associated with the extension of 38th Avenue from its current terminus at Himalaya Road east to E-470.

Figure 6 illustrates the resultant Short-Range future background projections. As shown, background volumes on Picadilly Road would be approximately 6,730 to 9,140 VPD within the study area.

38th Avenue would experience approximately 5,390 to 7,700 VPD. Daily volumes on Tibet Road would be about 1,030 to 2,010 VPD north of 38th Avenue and about 4,110 VPD to the south (due to Project Peak generated volumes).

Long Range (2040)

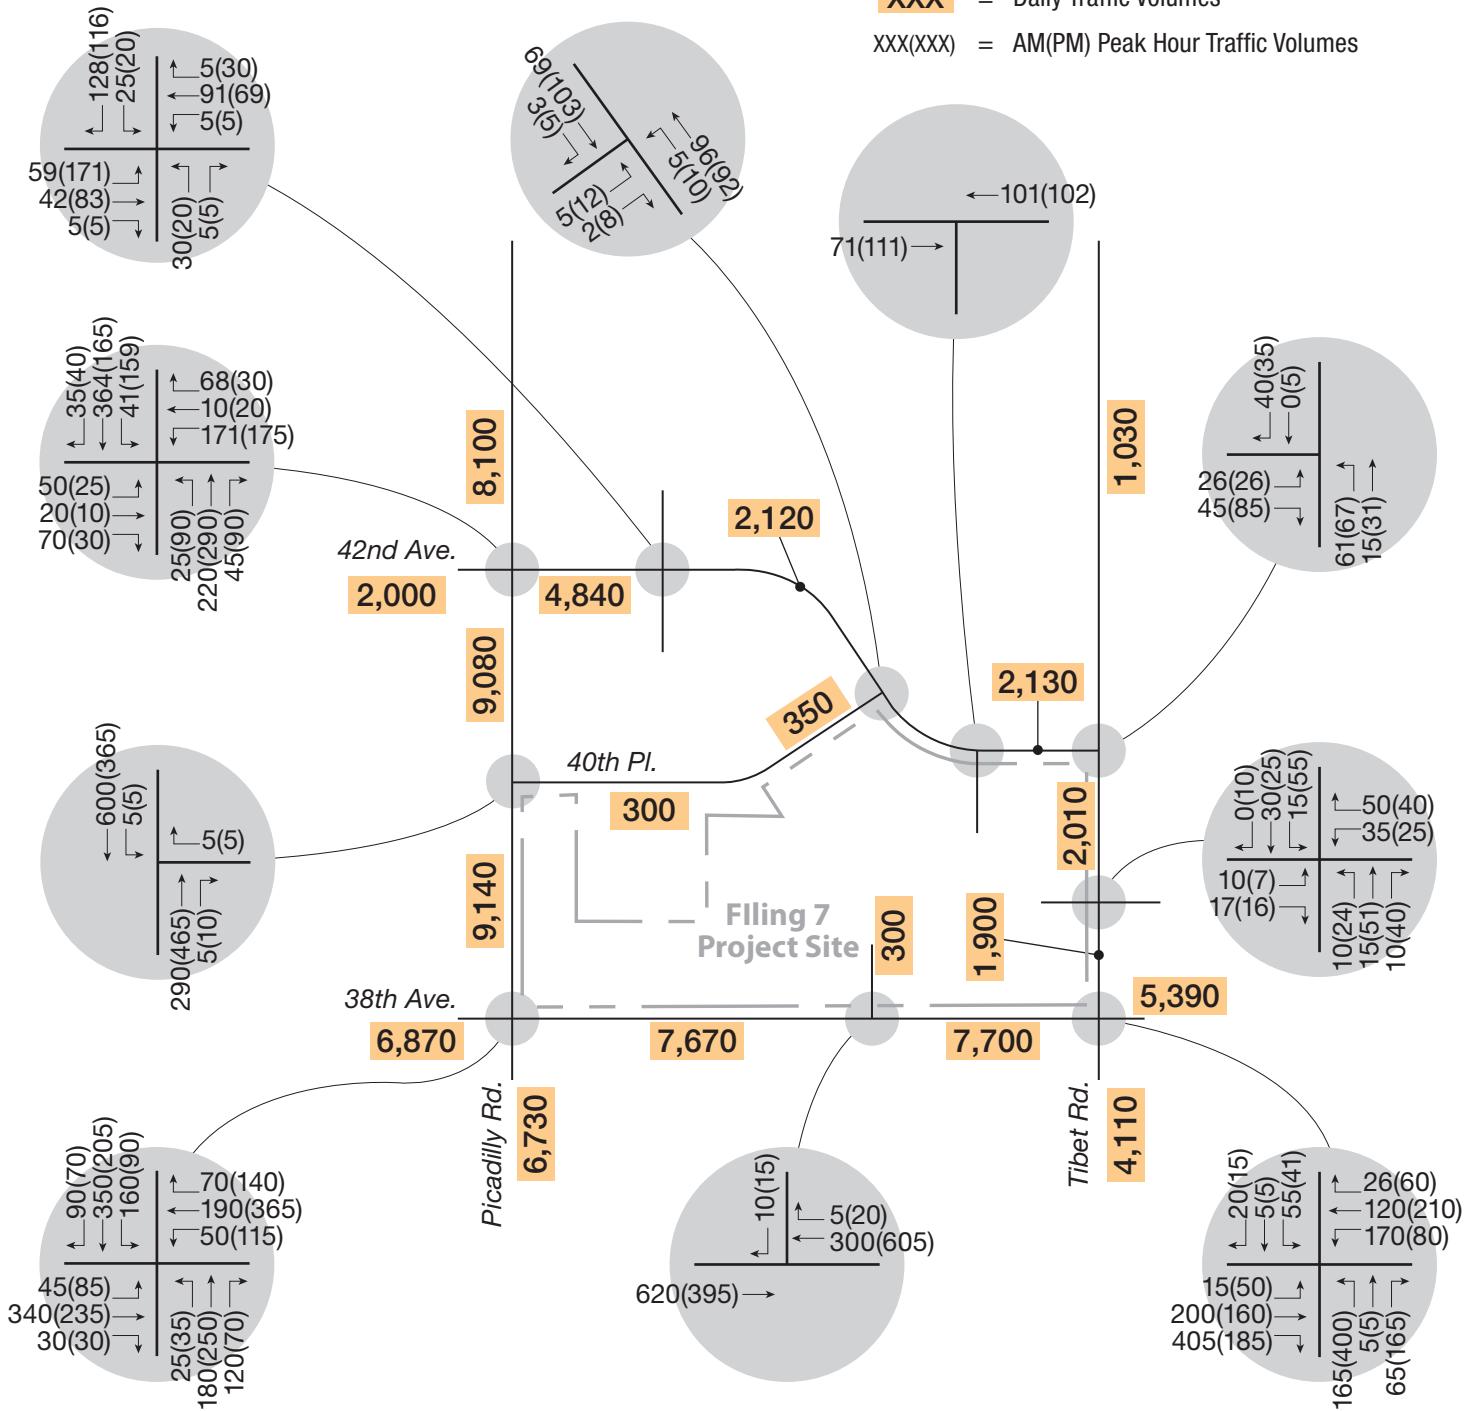

The Long-Range future background traffic volumes are based on the 2018 NEATS refresh project. The development of 2040 background projections includes anticipated development in the surrounding area, as follows:

- The Aurora Highlands 3,500 acres east of E-470 and The Aurora Highlands 310 located at Picadilly Road and 56th Avenue.
- Porteos – Estimated to generate approximately 120,000 trips per day when built out, based on the DRCOG model (this master plan's traffic impact study shows more given a maximum buildout scenario).
- Windler and Cardon properties that straddle E-470.
- Majestic (southwest of E-470 and 38th Avenue). Project Peak is a portion of this overall development.

Figure 77 illustrates the resultant Long-Range future background projections. As shown, background volumes on Picadilly Road would be between approximately 33,430 and 34,670 VPD within the study area. 38th Avenue would experience approximately 25,940 to 31,490 VPD. Daily volumes on Tibet Road adjacent to Filing 7 would be about 5,830 to 6,490 VPD.

Long-Range Background Traffic Volumes

IV.B. Background Traffic Operations

Short Range (2025)

The Short-Range future peak hour background volumes were used as the basis for intersection LOS analyses, the results of which are graphically depicted on **Figure 8**. As shown, year 2025 background traffic operations are projected to remain generally acceptable at study area intersections (**Appendix C** contains LOS worksheets). The analyses assume the following improvements:

- Picadilly Road, identified as a six-lane arterial in the current NEATS effort, would be constructed to an interim four-lane section.
- The Picadilly Road/38th Avenue intersection is expected to require signalization by 2025. Dual left-turn lanes would be needed on the westbound approach at this intersection.
- The intersection at 38th Avenue/Tibet Street would also require signalization per the Project Peak Traffic Impact Study. Dual left-turn lanes would be needed on the northbound approach at this intersection.

Outbound left-turns from 42nd Avenue at Picadilly Road would experience congestion and delays (LOS F) due to the heavy through-movements expected on Picadilly Road. This intersection is identified for signalization when signal warrants are met.

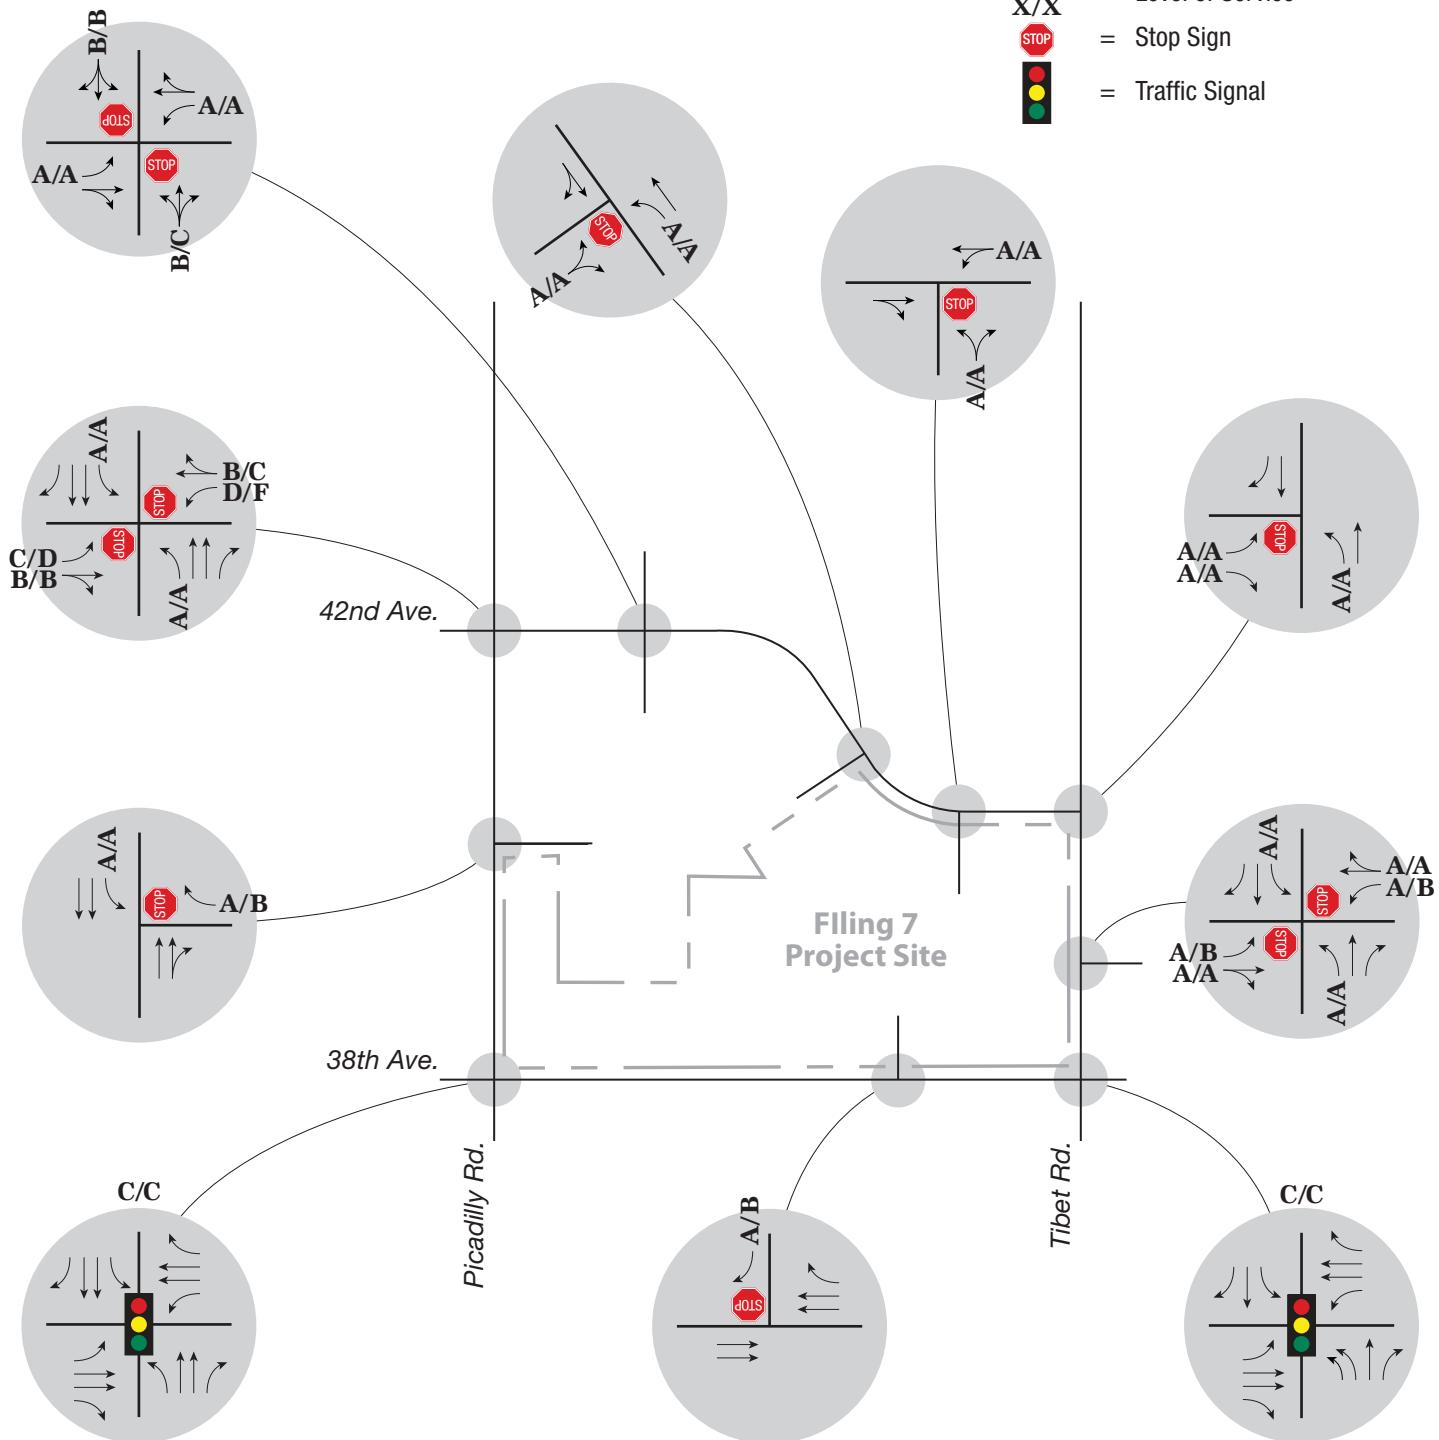

Long Range (2040)

The Long-Range future peak hour background volumes were used as the basis for intersection LOS analyses, the results of which are graphically depicted on **Figure 119**. As shown, year 2040 background traffic operations are projected to remain generally acceptable at study area intersections (**Appendix C** contains LOS worksheets). The analyses assume the following:

- The projected volumes on Picadilly Road adjacent to the site would approach six-lane arterial levels.
- The Picadilly Road/42nd Avenue would operate acceptably(LOS A or B) under signalized traffic control. This intersection is identified as a future traffic signal location.
- The projected traffic volumes along Tibet Road would remain within the general capacity of a two-lane collector roadway.

Level of Service**

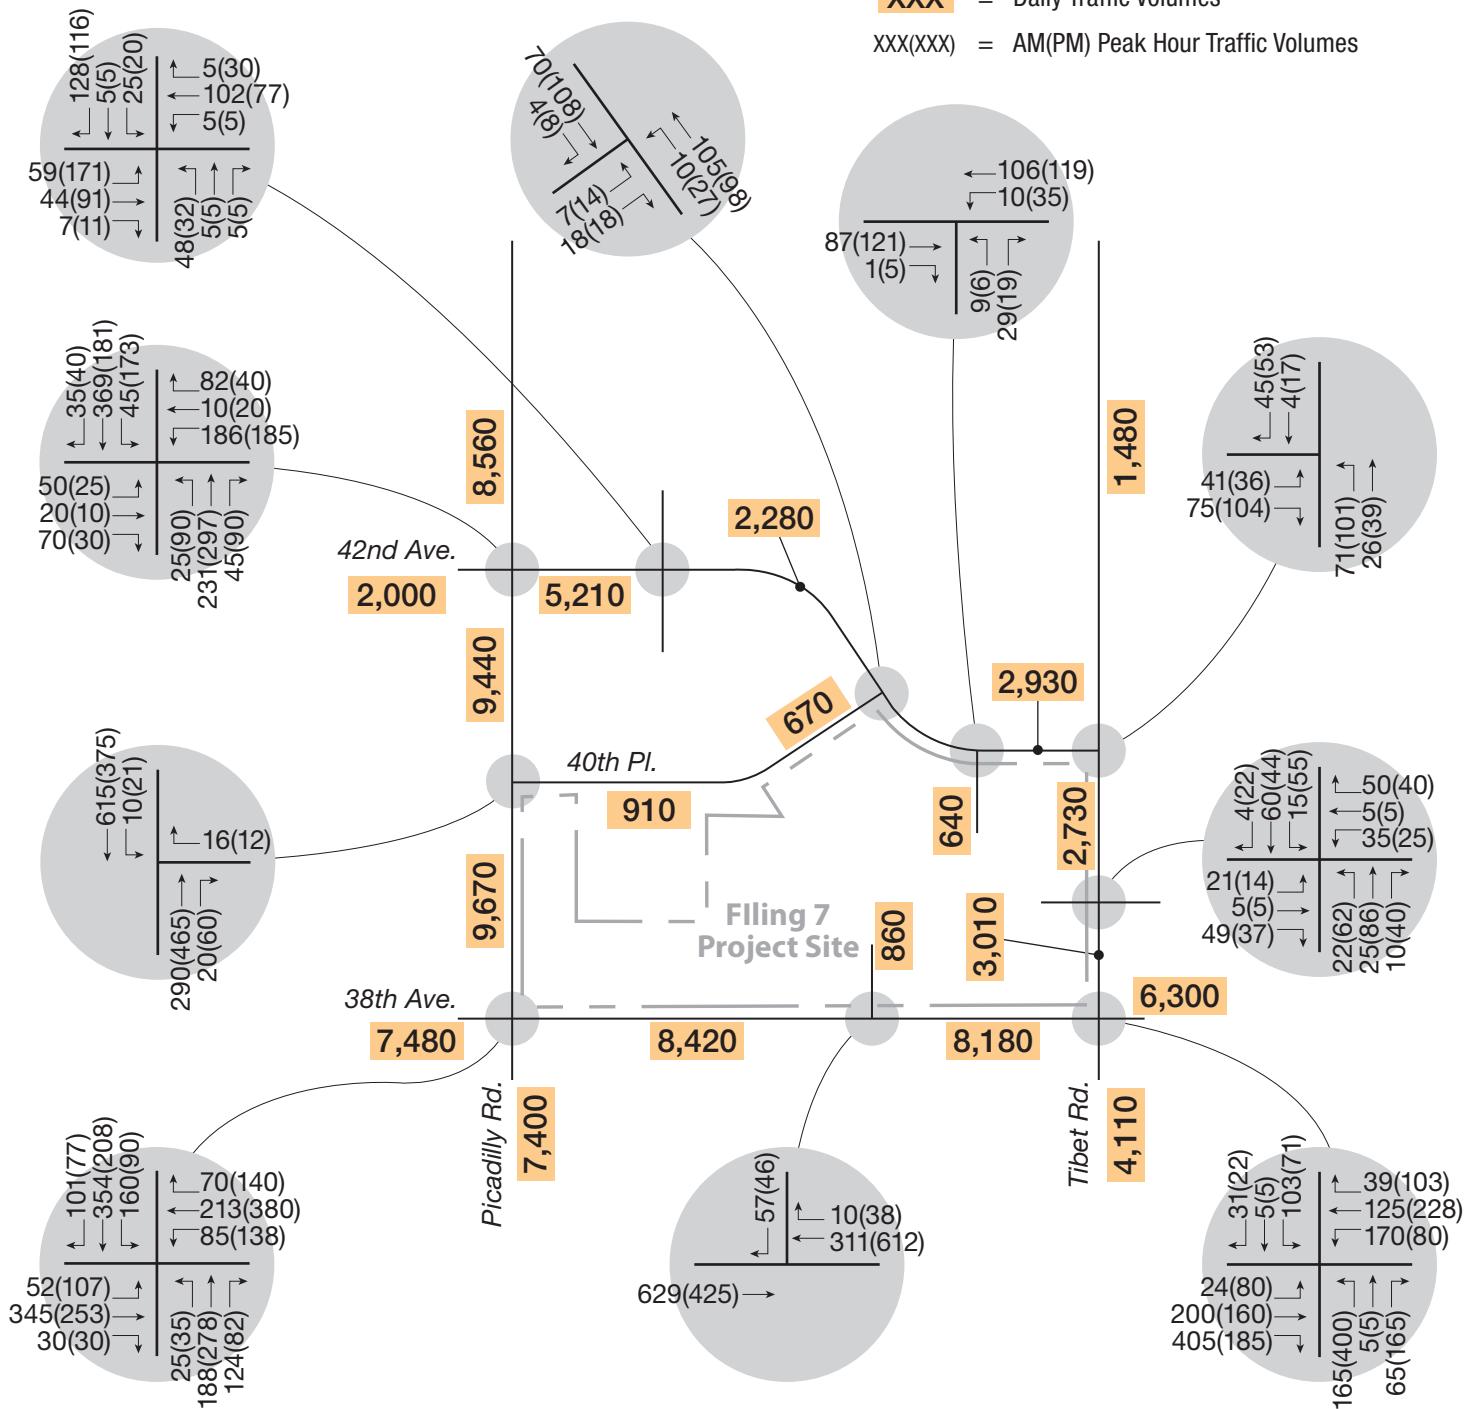

IV.C. Total Future Traffic

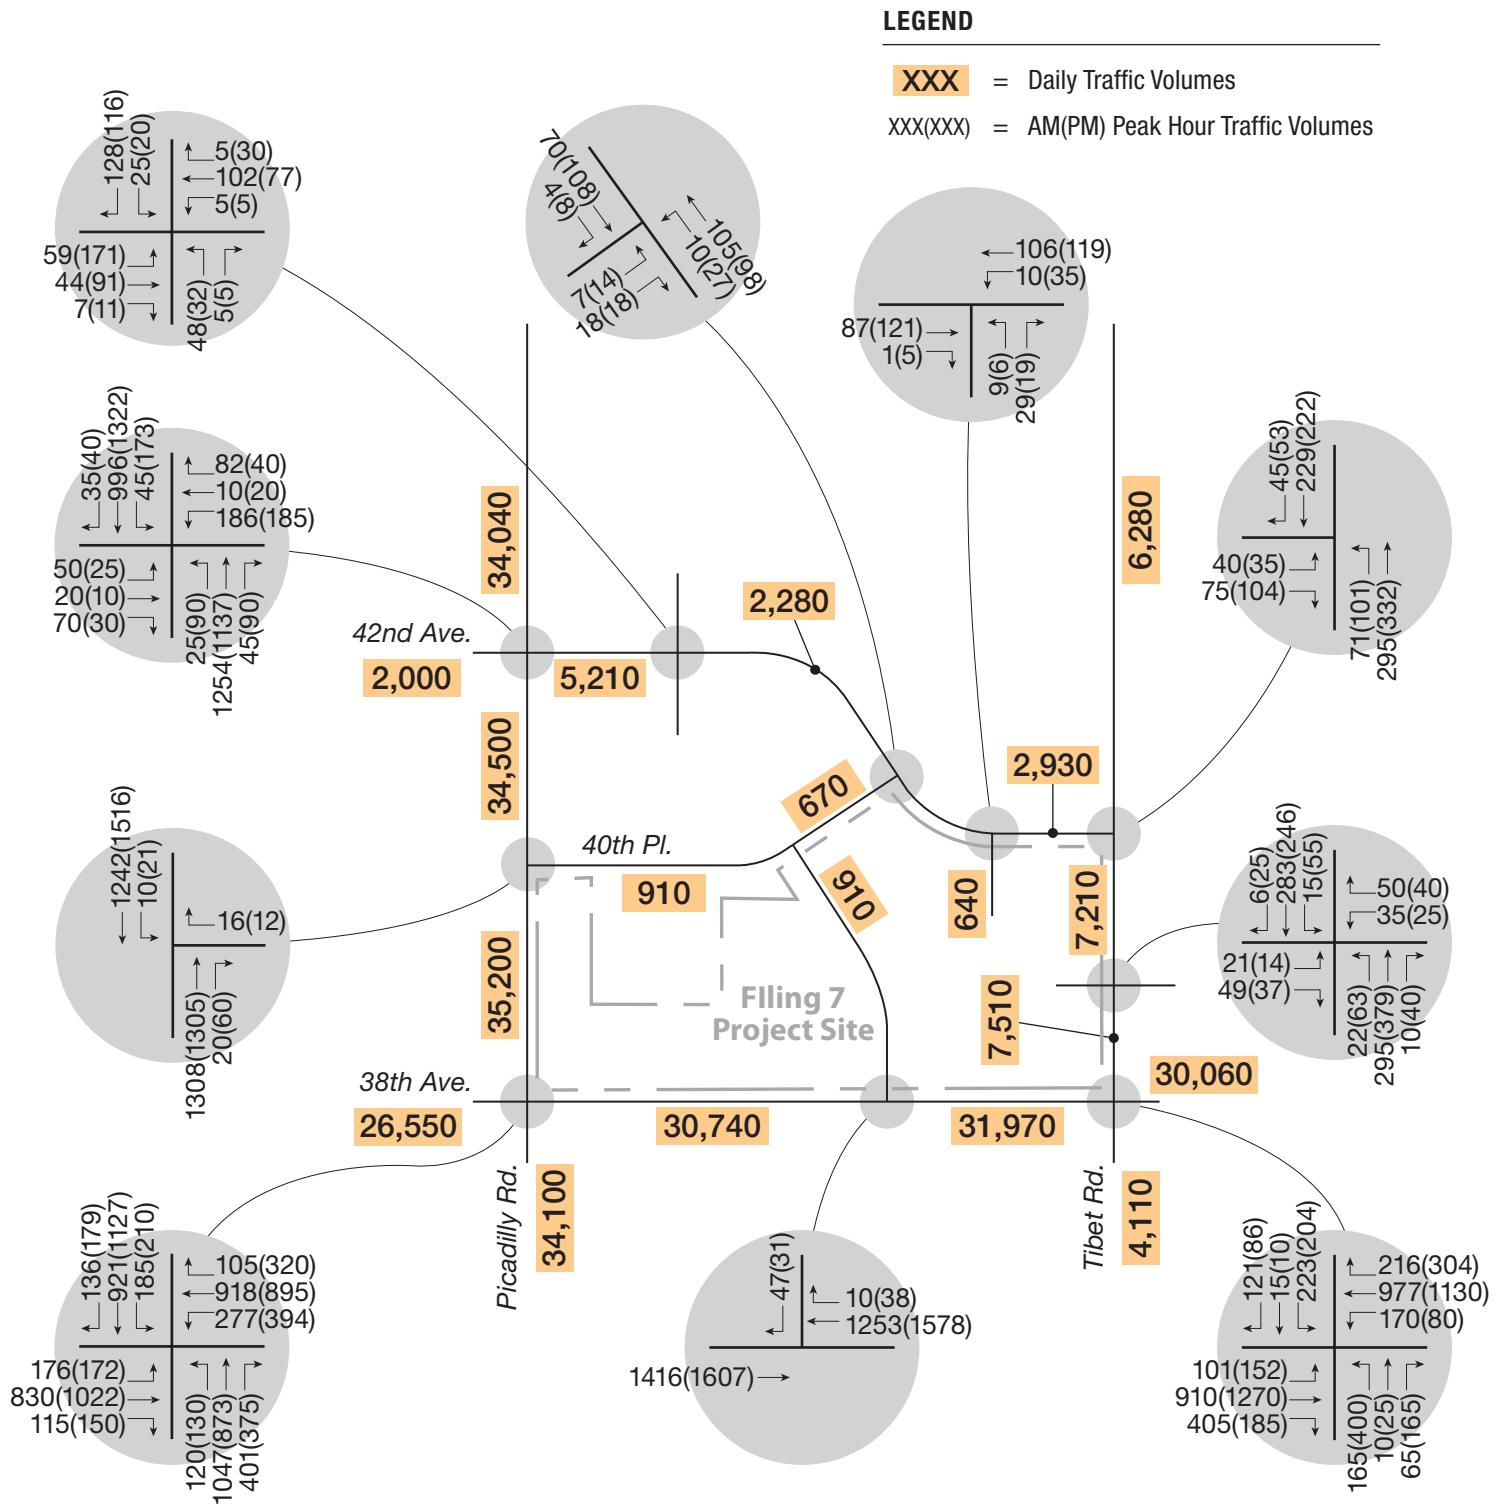

The site-generated traffic volumes (**Figure 5**) were added to the 2025 background traffic volumes (**Figure 6**) to produce the Short-Range future total traffic volumes illustrated on **Figure 10**. As shown, Picadilly Road daily volumes would range between about 7,400 and 9,670 VPD within the study area. 38th Avenue is estimated to serve approximately 6,300 to 8,420 VPD in the vicinity of the site. Tibet Road would carry 1,480 to 3,010 VPD adjacent to the site.

The site-generated traffic volumes (**Figure 5**) were added to the year 2040 background traffic volumes (**Figure 7**) to produce the Long-Range future total traffic volumes illustrated on **Figure 11**. By 2040, Picadilly Road is projected to serve up to 35,200 VPD within the study area. 38th Avenue is estimated to serve approximately 30,060 VPD east of the site and 26,550 VPD west of Picadilly Road. Tibet Road would carry up to 7,510 VPD within the study area. The Filing 7 development would represent less than 2 percent of the Picadilly Road traffic and about 3 percent of the 38th Avenue traffic projections.

FIGURE 11

Long-Range Total Traffic Volumes

V. EVALUATION

V.A. Level of Service

The Short-Range peak hour traffic volumes, intersection geometrics, and traffic were used as the basis for LOS analyses (**Figure 12**). **Appendix E** contains LOS worksheets. As shown, traffic operations are projected to remain generally acceptable at the study area intersections in the projected year 2025. The exception occurs at 42nd Avenue, where outbound left-turns would experience congestion and delays during peak times. This intersection is identified for signalization when warranted.

The Long-Range peak hour intersection operations are shown on **Figure 13** (**Appendix F** contains LOS worksheets). As shown, study area traffic operations would continue to be acceptable at the study area signalized intersections. The intersection at Picadilly Road/42nd Avenue would warrant signalization by 2040, as described in subsequent sections of this report. A traffic signal at this intersection would operate at LOS B during peak times.

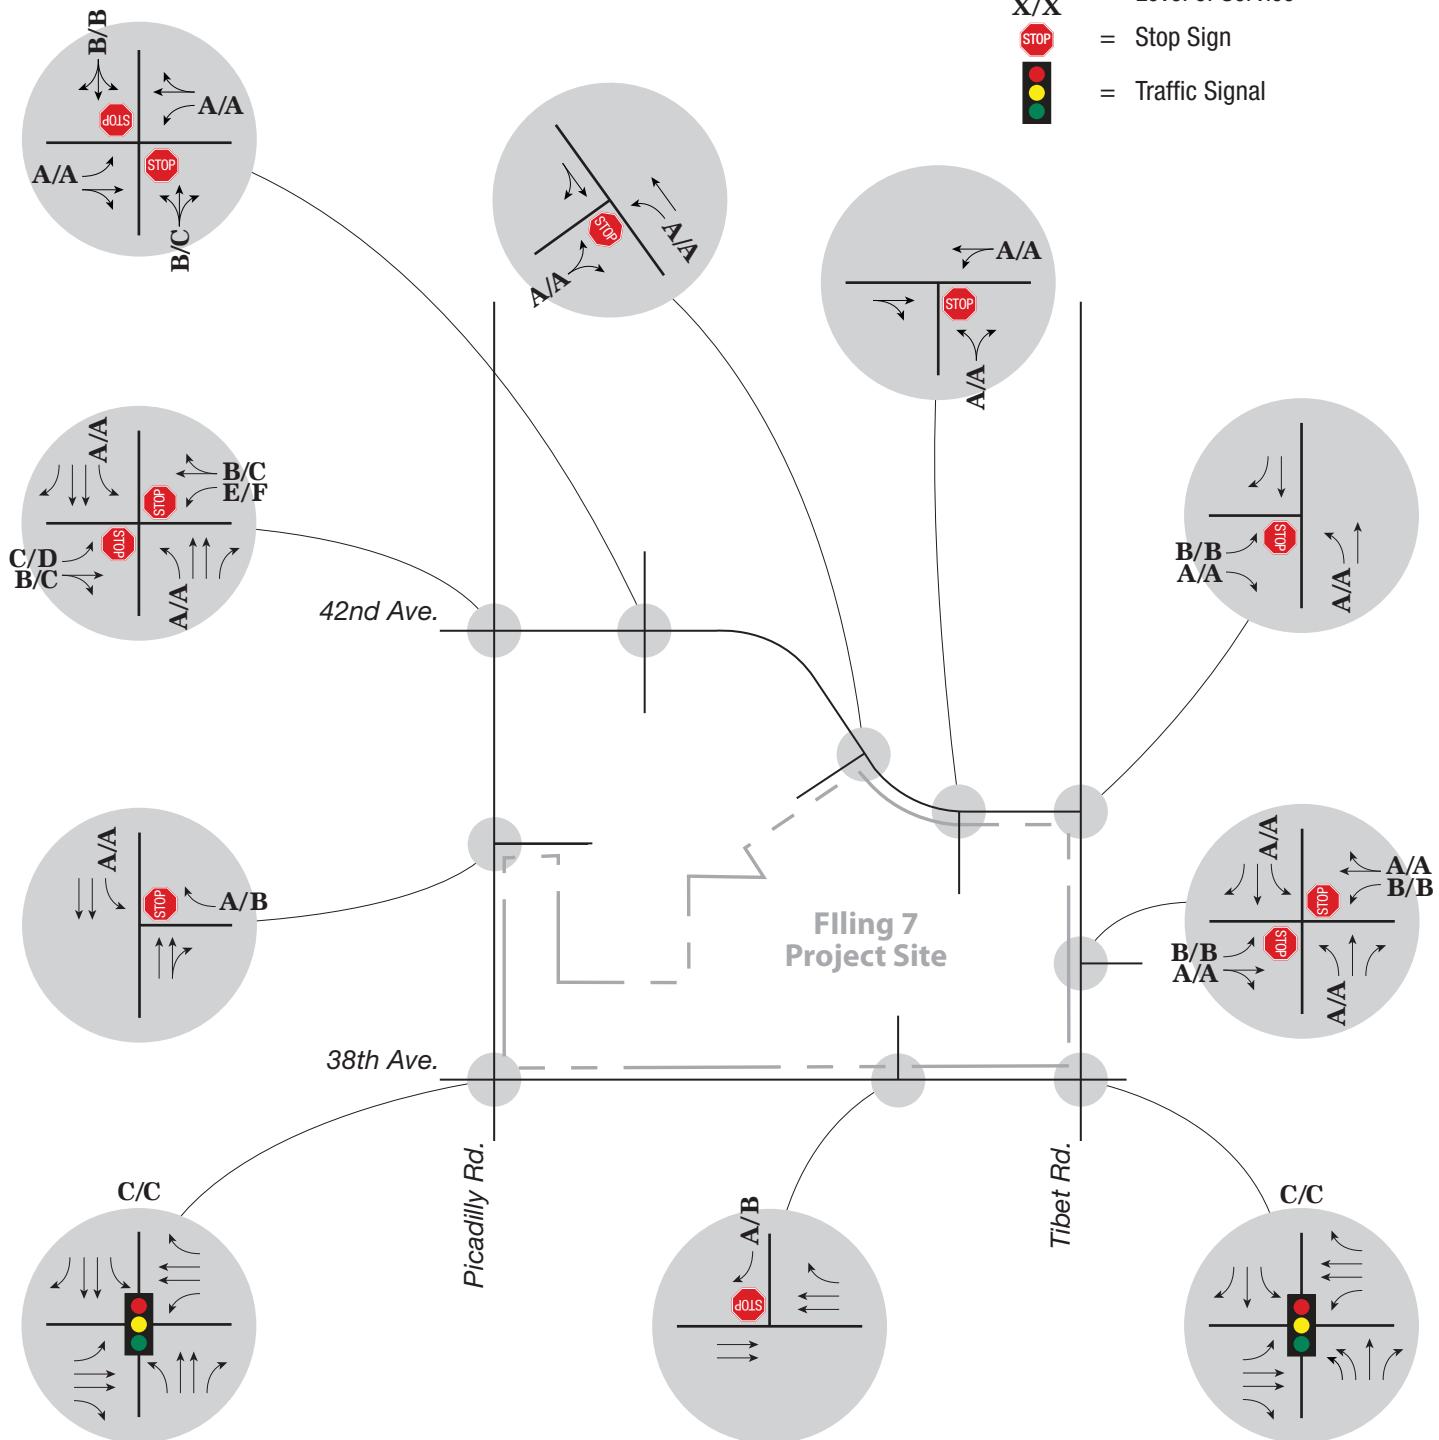

At Tibet Road/42nd Avenue, traffic operations would remain acceptable under STOP sign control on the eastbound approach. This intersection, however, is adjacent to a future school site, and could require a protected pedestrian crossing in the future. Therefore, future traffic and pedestrian conditions should be periodically monitored, and appropriate traffic control measures implemented, when warranted. Particular consideration of Warrant 5, School Crossing, would be anticipated. If signalized, the intersection would operate at LOS A during peak times.

Of note, a mid-block pedestrian crossing of Tibet Road is planned (by others) to the north of the 42nd Avenue intersection and could serve school children in the interim prior to signalization at 42nd Avenue. Other pedestrians would use this crossing to access the planned trail system. The City has requested rectangular rapid flashing beacons (RRFBs) at this crossing.

Traffic control at the internal intersections within Filing 7 would be unsignalized, with STOP sign control on the minor approaches. **Figure 14** depicts the proposed internal traffic control. Given the limited continuity of the internal local streets, additional traffic calming measures are not envisioned. In the future, the aforementioned school could warrant enhanced pedestrian crossing treatment, such as RRFBs at school crossings. This issue should be evaluated when the District comes in with a plan for the school site.

Traffic Control

V.B. Signal Warrants

The intersections at Picadilly Road/38th Avenue, Picadilly Road/42nd Avenue, and 38th Avenue/Tibet Road were evaluated for signal warrants based on the projected Short-Range Future and Long-Range Future projections. Warrants 1, 2, and 3 were considered.

Hourly volume estimates for Warrant 1, Eight Hour Volume and Warrant 2, Four Hour Volume were estimated based on the 72-hour counts conducted on both Picadilly Road and 42nd Avenue. Directional splits were also extracted from the counts. Signal warrant criteria documented in the *Manual on Uniform Traffic Control Devices*, FHWA, 2009 [MUTCD] were applied. Signal Warrant worksheets are provided in **Appendix G**.

It was determined that a traffic signal at Picadilly Road/38th Avenue would likely be warranted in the near term per Warrant 2, Four Hour Volume. Warrant 3, Peak Hour, would also be met.

The projected conditions at Picadilly Road/42nd Avenue would not meet MUTCD criteria in the near term but would meet Warrants 2 and 3 by 2040. The location of this intersection meets City of Aurora signal spacing criteria and would ultimately require a signal to maintain acceptable traffic operations. Conditions should be monitored over time to determine when a traffic signal should be installed.

38th Avenue/Tibet Road would meet Warrant 3, Peak Hour in the near term. Given the types of land uses proposed for Project Peak, the peak hour signal warrant could be appropriately applied. This intersection would likely meet Warrants 2 and 3 by the projected year 2040. Traffic conditions should be periodically monitored to determine when a traffic signal should be installed.

V.C. Street Layout

The proposed street layout at Filing 7 was evaluated relative to Section 4.04.1 of the City's Roadway Design and Construction Standards. The proposed street network generally meets the criteria as follows:

- Arterial spacing (Picadilly Road and 38th Avenue) generally meets the one-mile spacing requirement and is consistent with long-range planning efforts.
- Collector spacing (42nd Avenue and Tibet Road) generally meets the half-mile spacing requirement and is consistent with long-range planning.
- Local streets meet the connectivity requirements by providing one connection to each perimeter roadway: to Picadilly Road via 40th Place, to 38th Avenue via Riviera Court, and to Tibet Road via 39th Avenue.
- There are no cul-de-sacs or dead ends proposed.

V.D. Queues

The 95th percentile maximum probable queue lengths for Long-Range Future conditions were extracted from the SYNCHRO LOS worksheets. The queue lengths are converted into feet (assuming a typical length of 25 feet per vehicle) and are summarized in **Table 2**. The table also provides CDOT storage requirements per the State Highway Access Code (SHAC). The recommended storage lengths consider both the CDOT criteria and the queueing projections.

Table 2. Queue Length Summary – Long Range Future

Intersection/Movement	95 % Queue Length (ft)		CDOT Storage Requirement (ft)	Recommended Storage (ft)

Northbound Left	25	25	101	125
Eastbound Left	25	25	40	50
Eastbound Right	25	25	104	125

V.E. Auxiliary Lanes

The site access intersections along Picadilly Road, 38th Avenue, and Tibet Road were evaluated relative to auxiliary lane criteria in the Colorado Department of Transportation's *State Highway Access Code*. The following criteria (for NR-B, Non-Rural Arterial) apply to Picadilly Road and 38th Avenue intersections:

- Left-turn lanes are required where the associated volume exceeds 10 vehicles per hour. The left-turn lane is to consist of storage, deceleration, and taper length (taper is included in the deceleration).
- Right-turn lanes are required where the associated volume exceeds 25 vehicles per hour. The right-turn lane is to consist of deceleration and taper length (taper is included in the deceleration).

Table 3 summarizes the auxiliary lane length requirements for Picadilly Road.

Table 3. Auxiliary Lanes – Picadilly Road Intersections⁽¹⁾

Intersection	Direction	Left-Turn Lane				Right-Turn Lane		
		Storage	Decel	Taper	Total	Decel	Taper	Total
42 nd Avenue	SB	175	226	144	545	226	144	370
	NB	100	226	144	470	226	144	370
40 th Place ⁽²⁾	SB	40	226	144	410			
	NB					226	144	370

1. Lane lengths are given in feet.
2. The ultimate laneage for Picadilly Road is six through-lanes. Right-turn lanes are generally not required where there are already three through-lanes in the direction of travel, per the *State Highway Access Code*. In the interim prior to buildout of Picadilly Road, however, the above right-turn lanes will be required.

Table 4 summarizes the auxiliary lane length requirements for 38th Avenue.

Table 4. Auxiliary Lanes – 38th Avenue Intersections⁽¹⁾

Intersection	Direction	Left-Turn Lane				Right-Turn Lane		
		Storage	Decel	Taper	Total	Decel	Taper	Total
Picadilly Road	SB	275	226	144	645	226	144	370
	NB	175	226	144	545	226	144	370
	EB	275	226	144	645	226	144	370
	WB	400 ⁽²⁾	226	144	770	226	144	370
Riviera Court	WB					226	144	370
Tibet Road	SB	325	226	144	695	226	144	370
	NB	400 ⁽²⁾	226	144	770	226	144	370
	EB	200	226	144	570	226	144	370
	WB	225	226	144	595	226	144	370

1. Lane lengths are given in feet.
 2. Dual left-turn lanes have been proposed as part of Project Peak. Storage shown is per-lane; total storage required is 400 feet.
 3. The ultimate laneage for Picadilly Road is six through-lanes. Right-turn lanes are generally not required where there are already three through-lanes in the direction of travel, per the *State Highway Access Code*. In the interim prior to buildout of Picadilly Road, however, the above right-turn lanes will be required.

V.F. Recommendations

The roadway and intersection improvements that should ultimately be implemented within the study area include the following:

- Picadilly Road adjacent to the site is identified as a six-lane arterial in NEATS. This roadway is currently two lanes, and its widening to six lanes can be phased as conditions require. Upon the initial development of this site, Picadilly Road should be widened at 42nd Avenue and 40th Place to accommodate a center southbound left-turn lane at each intersection to serve inbound traffic. Install a northbound right-turn deceleration lane at 42nd Avenue.
- Initially install STOP-sign control at Picadilly Road/42nd Avenue (westbound approach). Periodically monitor traffic conditions, and install signalized traffic control, when warranted.
- Install STOP-sign control on the westbound approach at Picadilly Road/40th Place. This intersection is to be restricted to ¾ movement.
- Construct 38th Avenue as a four-lane arterial, per NEATS.
- Construct the intersection of Picadilly Road/38th Avenue to include separate left-turn and right-turn lanes along each approach. Dual left-turn lanes will be required on the westbound approach. Periodically monitor this intersection and install a traffic signal, when warranted.
- Construct Tibet Road as a three-lane collector.
- Periodically monitor traffic conditions at the 38th Avenue/Tibet Road intersection and install signalized traffic control, when warranted. Dual Left-turn lanes will be required on the

northbound approach. Additional widening along 38th Avenue could be required to accommodate two extra-wide through-lanes to receive the northbound dual lefts.

- Restrict the 38th Avenue/Riviera Court intersection to RIRO movements. Install STOP sign control on the southbound approach.
- Install STOP sign control at the 42nd Avenue/Tibet Road intersection and periodically monitor traffic and pedestrian conditions. This intersection could ultimately warrant a signal due to its proximity to the future school site and the potential need for a protected school crossing. The City has given direction for a midblock refuge and rectangular rapid flashing beacons at a planned pedestrian crossing north of this intersection (to be provided by others).
- Install STOP sign control on the 39th Avenue approaches at Tibet Road. This intersection would not be a candidate for a future traffic signal.
- Install STOP-sign control at the site-internal intersections as previously depicted.

VI. CONCLUSIONS AND RECOMMENDATIONS

Green Valley Ranch East Filing 7 consists of 327 single-family homes to be developed within the Green Valley Ranch East master plan. The site is located along the east side of Picadilly Road, north of the 38th Avenue future alignment. Vehicular access would be via two roadway connections onto Picadilly Road: at 42nd Avenue and 40th Place. Additional roadway connections would also be available via 38th Avenue (at Riviera Court) and Tibet Road (at 39th Avenue and 42nd Avenue).

The proposed Filing 7 residential development would have a trip generation potential of about 3,100 trips per day, with 235 AM peak hour trips and 315 PM peak hour trips. The potential impacts of the site-generated traffic were evaluated under both Short-Range and Long-Range future scenarios. In general, the existing and planned roadway system would have sufficient reserve capacity to accommodate the projected increases. Relative to this, the following findings and recommendations are specific to the Filing 7 site:

- Construct Picadilly Road at 42nd Avenue and 40th Place to four-lane arterial standards. Provide a southbound left-turn lane at each intersection to serve inbound traffic. Install a northbound right-turn deceleration lane at 42nd Avenue. Ultimately, Picadilly Road will be a six-lane arterial per NEATS.
- Restrict 40th Place to ¾ -movement at Picadilly Road. Install STOP sign control exiting the site.
- Install STOP-sign control at Picadilly Road/42nd Avenue (westbound approach). Periodically monitor traffic conditions, and install signalized traffic control, when warranted.
- Install STOP-sign control on the westbound approach at Picadilly Road/40th Place.
- Construct 38th Avenue as a four-lane arterial, per NEATS.
- Construct the intersection of Picadilly Road/38th Avenue to include separate left-turn and right-turn lanes along each approach. Dual left-turn lanes will be required on the westbound approach. Periodically monitor this intersection and install a traffic signal, when warranted.
- Construct Tibet Road as a three-lane collector.
- Periodically monitor traffic conditions at the 38th Avenue/Tibet Road intersection and install signalized traffic control, when warranted. Dual left-turn lanes will be required on the northbound approach, with potential widening of westbound 38th Avenue to receive the dual lefts.
- Restrict the 38th Avenue/Riviera Court intersection to RIRO movements. Install STOP sign control on the southbound approach.
- Periodically monitor traffic and pedestrian conditions at the 42nd Avenue/Tibet Road intersection relative to MUTCD signal warrants for school crossings. Take appropriate traffic control measures when warranted.
- Install STOP sign control on the 39th Avenue approaches at Tibet Road.
- Install STOP-sign control at the site-internal intersections as previously depicted (see **Figure 14**).

Intersection Summary

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 124 (95%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.59

Intersection Signal Delay: 23.4

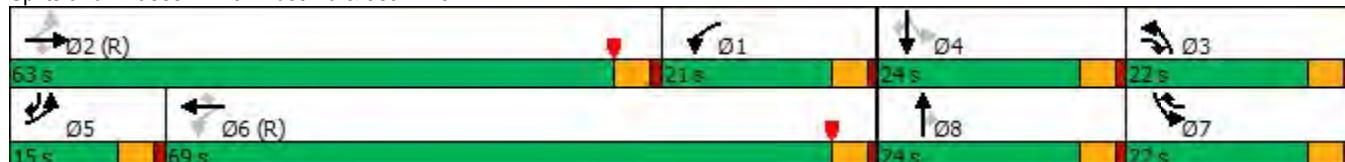

Intersection LOS: C

Intersection Capacity Utilization 62.2%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 13: Tibet Rd & 38th Ave

Intersection Summary

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 124 (95%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.41

Intersection Signal Delay: 21.4

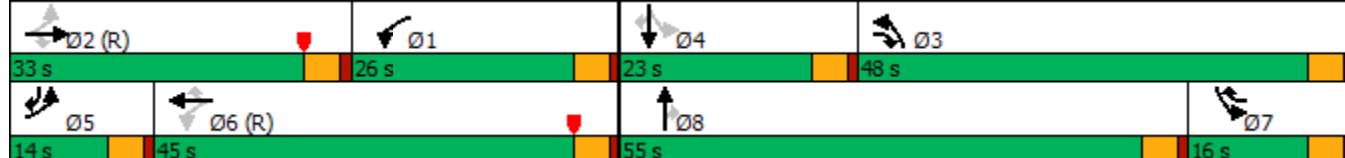

Intersection LOS: C

Intersection Capacity Utilization 49.9%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 13: Tibet Rd & 38th Ave

HCM 6th TWSC
1: Picadilly Rd & 42nd Ave

Intersection Summary

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 18 (14%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.97

Intersection Signal Delay: 29.0

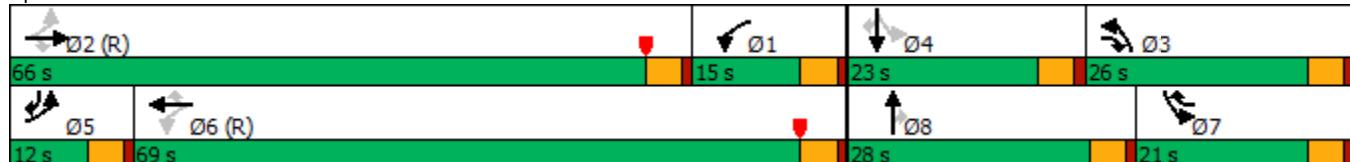

Intersection LOS: C

Intersection Capacity Utilization 69.0%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 13: Tibet Rd & 38th Ave
