

The Aurora H Tr

Aerotrop

83

Comments 11.3.22:

- 1) The scope/organization of this study is similar to the North A study, which is very helpful by means of comparing the two documents.
- 2) That being said, while trip distribution assumptions are identical, resulting trip assignment and total No Project and With Project trips do not match what is presented in the North A TIS (2nd Referral). Proceeding forward, common intersections will need to be demonstrated to be consistent between the North filings.
- 3) It appears that the summation of site trips on the external nodes exceeds 10k ADTs, while the total trip generation for North B is ~5,900 ADT. Some clarification would be appreciated.
- 4) Information regarding ADTs anticipated for the 48th section between Harvest/Powhaton is present at the end of this document and attached to the email delivery of these comments. The adjustment to NEATS volumes due to a (farther north) connection of Powhaton to Harvest will affect intersection volumes and operations at both 48th/Harvest and 48th/Powhaton intersections, and incorporation of the updated volumes in this study is important to accommodate any possible reduction in intersection geometry, as appropriate.
- 5) Please provide warrant study worksheets for the intersections that are anticipated to be signalized in the Horizon year analysis.
- 6) Ensure intersection recommendations match North A TIS (2nd Referral), primarily 42nd/Denali.
- 7) Provide table on Auxiliary Lane Recommendations similar to Table 6 in the North A study.
- 8) Other more minor comments throughout.

Introduction

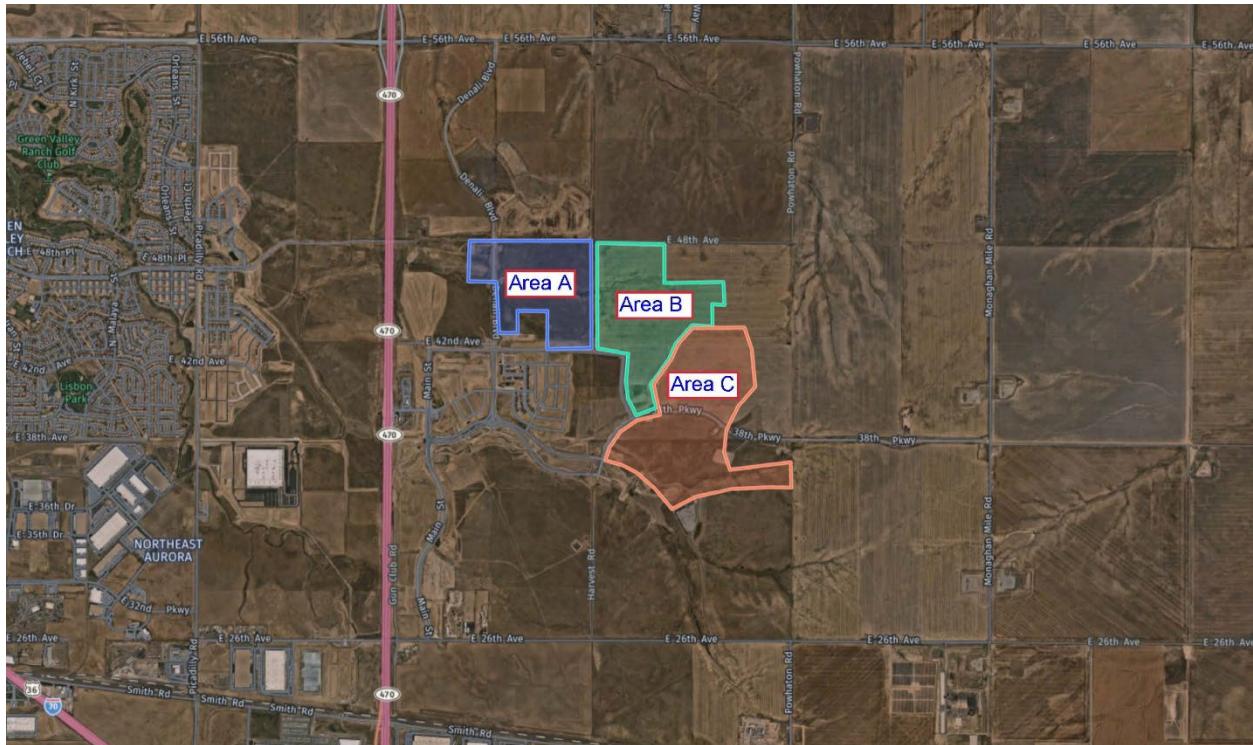

The Aurora Highlands is a 2,550-acre development located between Denver International Airport (DEN) and Interstate 70 (I-70). The Aurora Highland North (TAH North) phase includes the majority of the planning areas between 42nd Avenue and 28th Avenue. TAHNorth has been split into three sub-areas; Area A, Area B and Area C.

The purpose of this study is to assess the effects the development of the TAH North, Area B will have on the surrounding transportation system.

The report is organized as follows:

- ***Introduction*** – Describes the purpose and intent of this study.
- ***Area Conditions*** – Describes the study area land uses as well as the existing and future roadway network.
- ***Proposed Development*** – Describes the proposed development and the location.
- ***Projected Traffic*** – Identifies the expected number of daily and peak hour trips that will be generated by the Aurora Highlands, North Area, Area B development. The expected external trip distribution is also shown.
- ***Traffic Analysis*** – Will analyze the horizon year (2040) conditions with and without the project.
- ***Findings and Conclusions*** – Identifies any deficiencies in the study area roadway network with or without the project and mitigation measures that will alleviate any identified deficiencies.
- ***Recommendations*** – Provides a summary of the study findings.

Figure 1. Vicinity Map

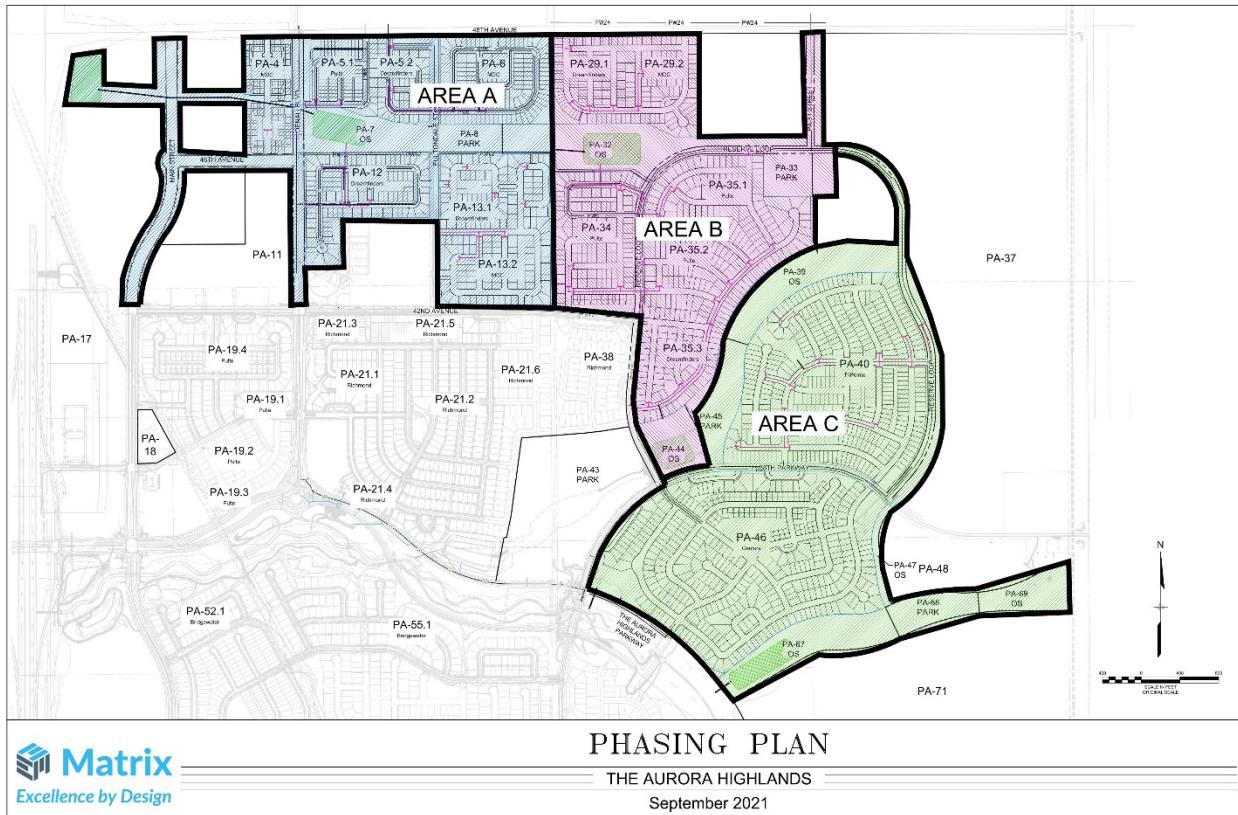

Proposed Development

The Aurora Highlands North Area will consist of 2,107 single family detached homes.

Figure 2 illustrates The Aurora Highlands North site plan.

Figure 2. The Aurora Highlands North Area Site Plan

Area Conditions

This section describes the existing conditions and the planned level of improvements adjacent to the Aurora Highlands North Area development.

Study Area Land Use

The Aurora Highlands, North Area will be constructed on vacant land and is bound on the west by E-470, on the south by the future The Aurora Highlands Parkway, on the east by the future Powhaton Road and the north by 48th Avenue. This area of Aurora is mostly vacant land but is growing rapidly and includes other developments such as other areas of The Aurora Highlands, Windler, Sagebrush and ATEC.

Site Accessibility

The existing roadway system is largely non-existent in this area of Aurora. However, the future roadway network consists of the following transportation facilities:

E-470 is a north-south four-lane tollway that runs along The Aurora Highlands' west side. A grade-separated interchange is provided at 56th Avenue. An interchange is planned at 48th Avenue and the bridge over E-470 at 48th Avenue is in place (the roadway connecting to it is not yet built, nor are the ramps).

26th Avenue is a minor two-lane roadway facility along the south side of The Aurora Highlands spanning E-470 (no interchange) and extending to Picadilly Road to the west and Watkins Road to the east.

Powhaton Road is a two-lane road that will ultimately define the east side of the residential development within The Aurora Highlands. Currently, this road extends south from 26th Avenue as a two-lane facility, crossing the Union Pacific (UP) Railroad at-grade, spanning I-70, and extending south to Jewell Avenue.

48th Avenue will be constructed on the north side of The Aurora Highlands prior to issuance of any Certificate of Occupancy for lots within TAH North. 48th Avenue will ultimately be a 6-lane major arterial and have a grade-separate interchange with E-470. The south half of this arterial will be built in conjunction with The Aurora Highlands by ARTA (Aerotropolis Regional Transportation Authority). The north half of 48th Avenue will be constructed by the Windler development to the north. The timing of individual developments is unclear, so it is difficult to determine when 48th Avenue will need to be constructed beyond each half-road section. It is assumed that if only the north or south half of 48th Avenue is constructed first, that it would serve temporarily as a 3-lane collector road with one lane in each direction and a center turn lane. In this scenario, the daily threshold for the half roadway section would be 12,000 vehicles-per-day. Daily traffic from Area B alone would not require more than the south half three-lane collector road section on its own.

42nd Avenue is an east-west two-lane road lies on the south side of Area A. This road will ultimately connect Area B to E-470

The Aurora Highlands Parkway currently exists as an east-west four-lane to six-lane facility between Main Street and 38th Parkway. It has a large median east of Denali Boulevard containing a creek and recreational trail. The Aurora Highlands Parkway will ultimately be a four-lane minor arterial.

38th Parkway currently exists as a three-lane (striped median/center turn lane) roadway between The Aurora Highlands Parkway and Reserve Loop (western connection). It will ultimately connect to Powhaton Road as a three-lane collector road.

No existing conditions analysis will be completed for this study as the land is mostly vacant at this time and has no traffic other than construction traffic. No new traffic counts were conducted for this study. This study builds on the traffic volumes presented *The Aurora Highlands Traffic Impact Study*, dated August 2019 which looked at the entirety of The Aurora Highlands development. The studies of surrounding developments are as follows:

 The list of informing studies should match the North A TIS, to include Flgs 1, 2, 4, 5, and 8

- The Aurora Highlands Transportation Impact Study; August 2019
- ATEC Traffic Impact Analysis; November 2019
- The Aurora Highlands Filings 7 Phases 1-3 DR Horton Transportation Impact Study; May 2020
- The Aurora Highlands Filing 16 Traffic Impact Study; August 2021
- Windler Master Plan Master Traffic Study; October 2021

Projected Development Traffic

This section documents how much traffic The Aurora Highlands, North Area, Area B development is expected to generate and how the external site trips will be distributed on the adjacent roadway network.

Trip Generation

The vehicle trips associated with The Aurora Highlands, North Area, Area B were calculated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition*. This methodology consists of choosing an independent variable for the land use for a particular time of day. The independent variable correlates to the variation in trip ends and is related to the land use. The value of the independent variable is either multiplied by a weighted average or used in a regression equation to calculate the trips generated by the land use. The *ITE Trip Generation Manual* provides guidance on when to use the weighted average versus the regression equation. In most cases, the regression equations are recommended when there are adequate study data points.

Table 1 shows the trips that are expected to be generated by The Aurora Highlands, North Area, Area B at build out.

Table 1. TAH North Area B Trip Generation 

Parcel	ITE Land Use and Code	Size	Units	The Aurora Highlands - Area B			AM Peak Hour			PM Peak Hour		
				Weekday			Total	Entering	Exiting	Total	Entering	Exiting
				Total	Entering	Exiting						
PA-34	210 - Single-Family Detached Housing	162	DU	1572	786	786	116	30	86	157	99	58
PA-29.1	210 - Single-Family Detached Housing	50	DU	534	267	267	39	10	29	52	33	19
PA-29.2	210 - Single-Family Detached Housing	118	DU	1176	588	588	87	23	64	116	73	43
PA-35.1	210 - Single-Family Detached Housing	79	DU	812	406	406	60	16	44	79	50	29
PA-35.2	210 - Single-Family Detached Housing	105	DU	1056	528	528	78	20	58	104	66	38
PA-35.3	210 - Single-Family Detached Housing	72	DU	746	373	373	55	14	41	73	46	27
Totals		586	DU	5896	2948	2948	435	113	322	581	367	214

No trip reduction is accounted for because there is only one land-use.

Trip Distribution

Figure 3 illustrates the expected external distribution of travel for the site-generated trips. This distribution was determined by reviewing the general distribution of trips on the roadway network in *The Aurora Highlands Traffic Impact Study*, dated August 2019.

Please update this graphic to match North A TIS (with the added detail on directional distribution included in Figure 3, 2nd Referral.)

Figure 3. Trip Distribution

The overall distribution based on the previous study is 48% of the trips will travel to/from the south; 20% of the trips will travel to/from the west; 22% of the trips will travel to/from the north and 10% of the trips will travel to/from the east. When those overall distributions are distributed among the available lanes traveling in each direction, the distributions shown in Figure 3 is the result.

The project trips for both the AM and PM peak hours are shown in Figures 4 and 5 and daily project trips are shown in Figure 6.

Figure 4. The Aurora Highlands North, Area B Project Trips (AM Peak Hour)

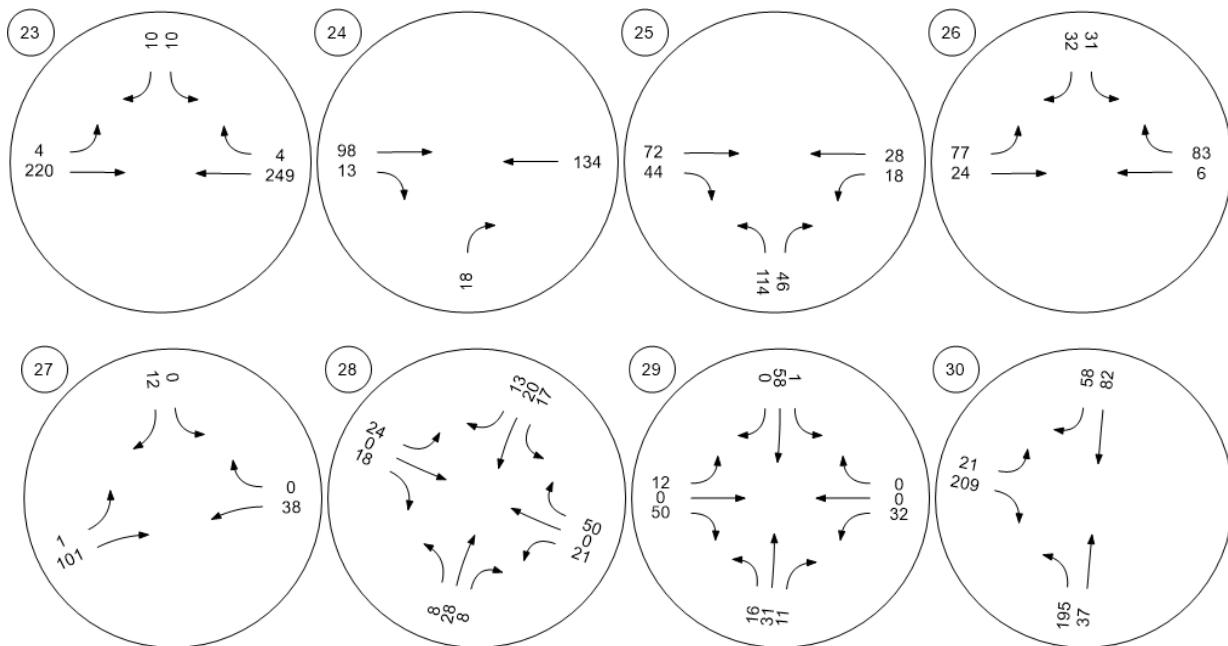

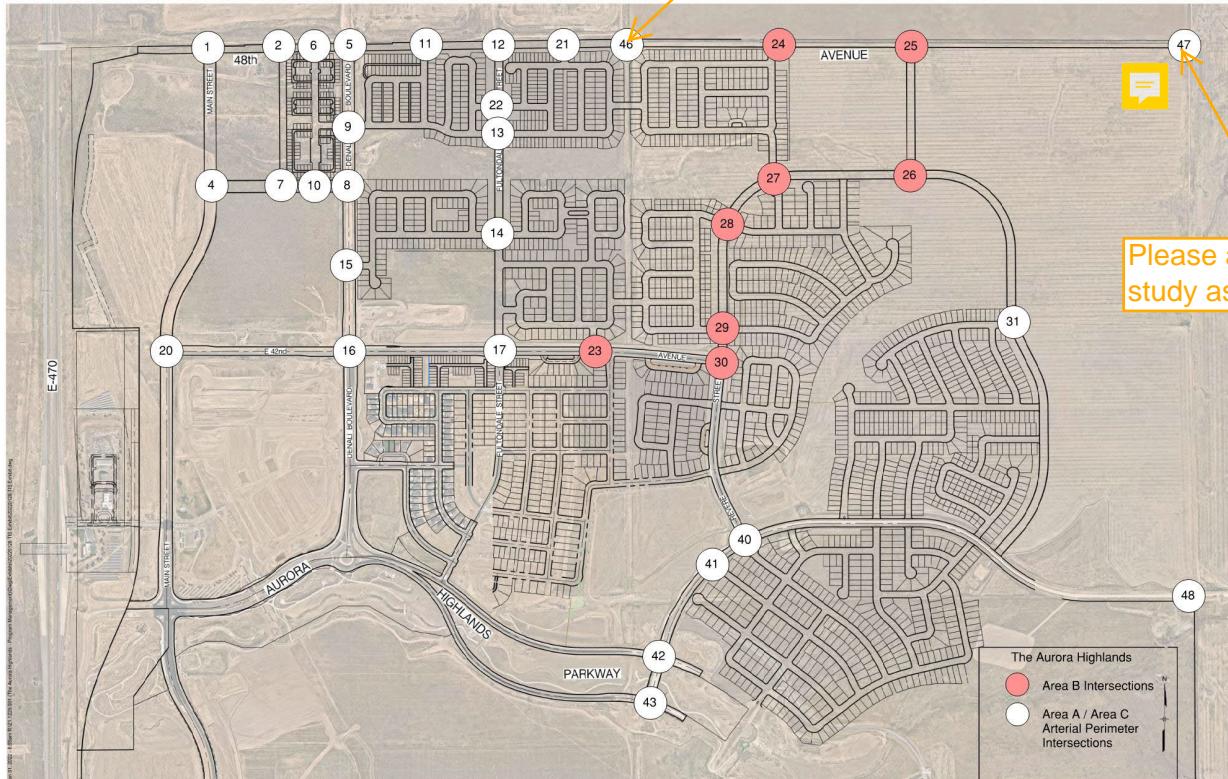

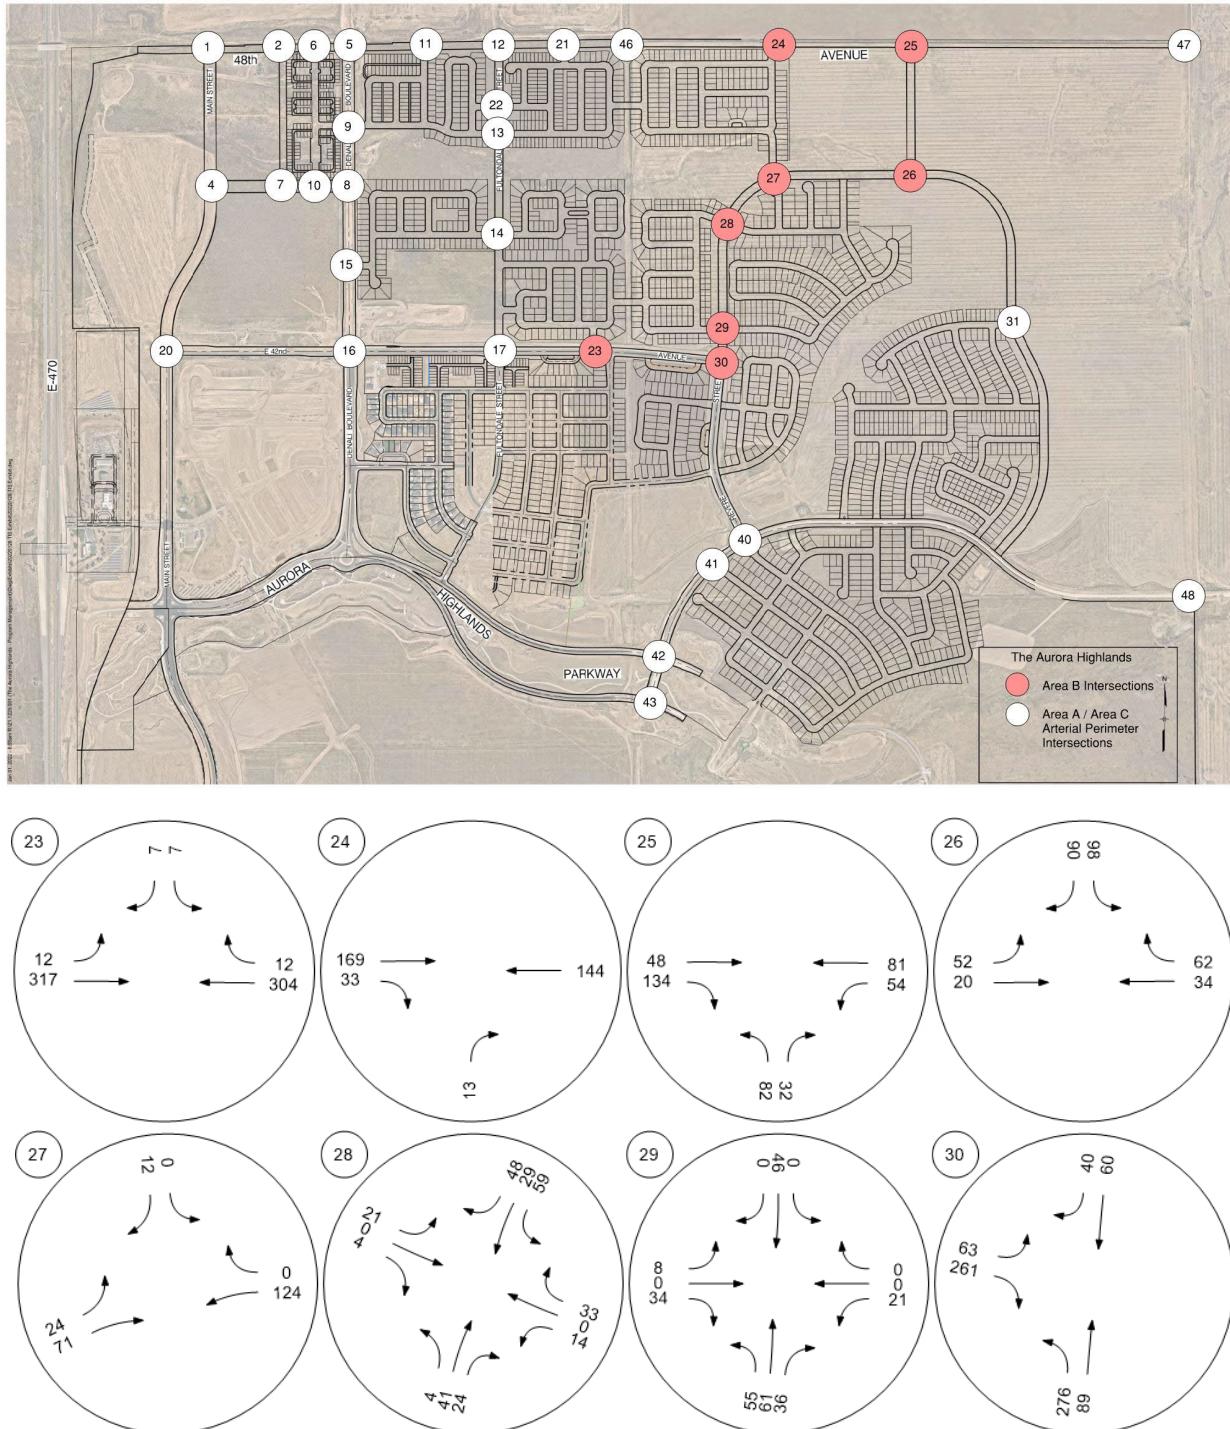

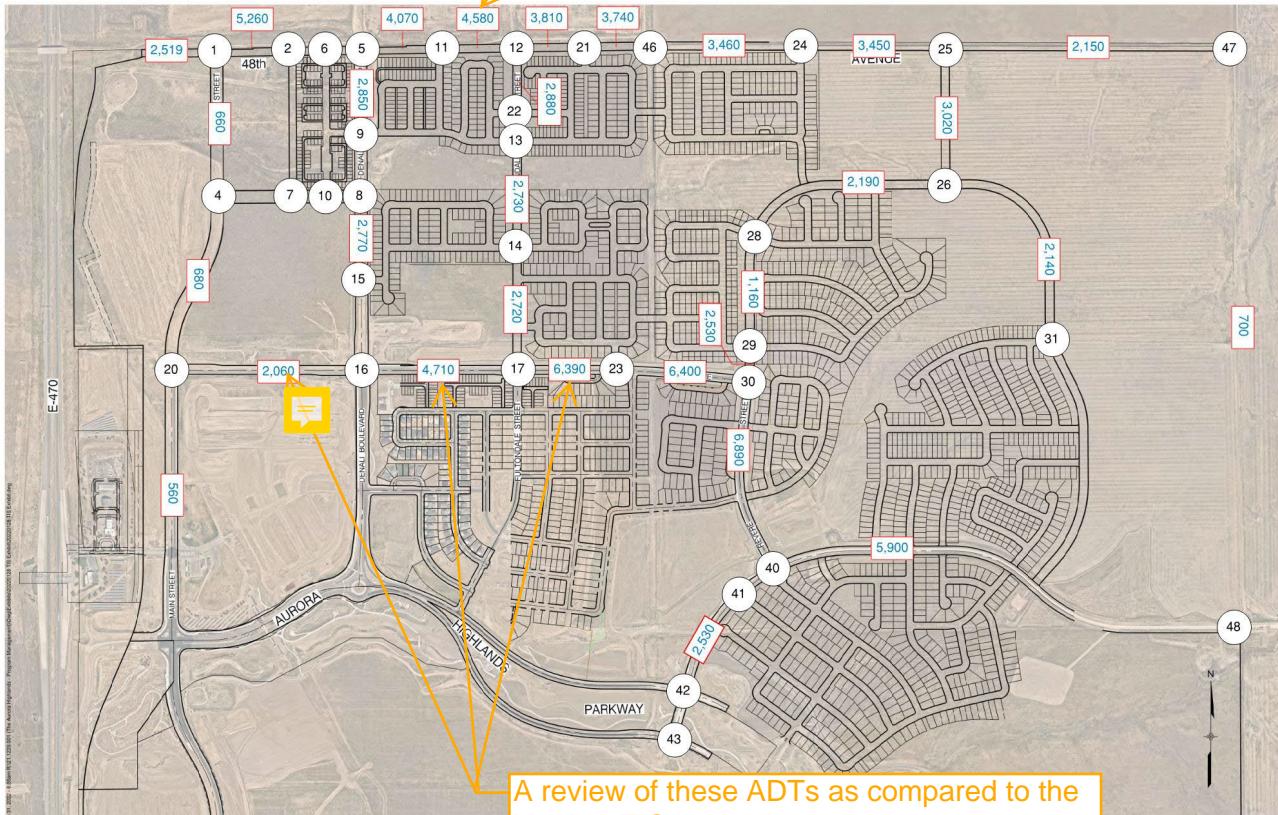

Figure 5. The Aurora Highlands North, Area B Project Trips (PM Peak)

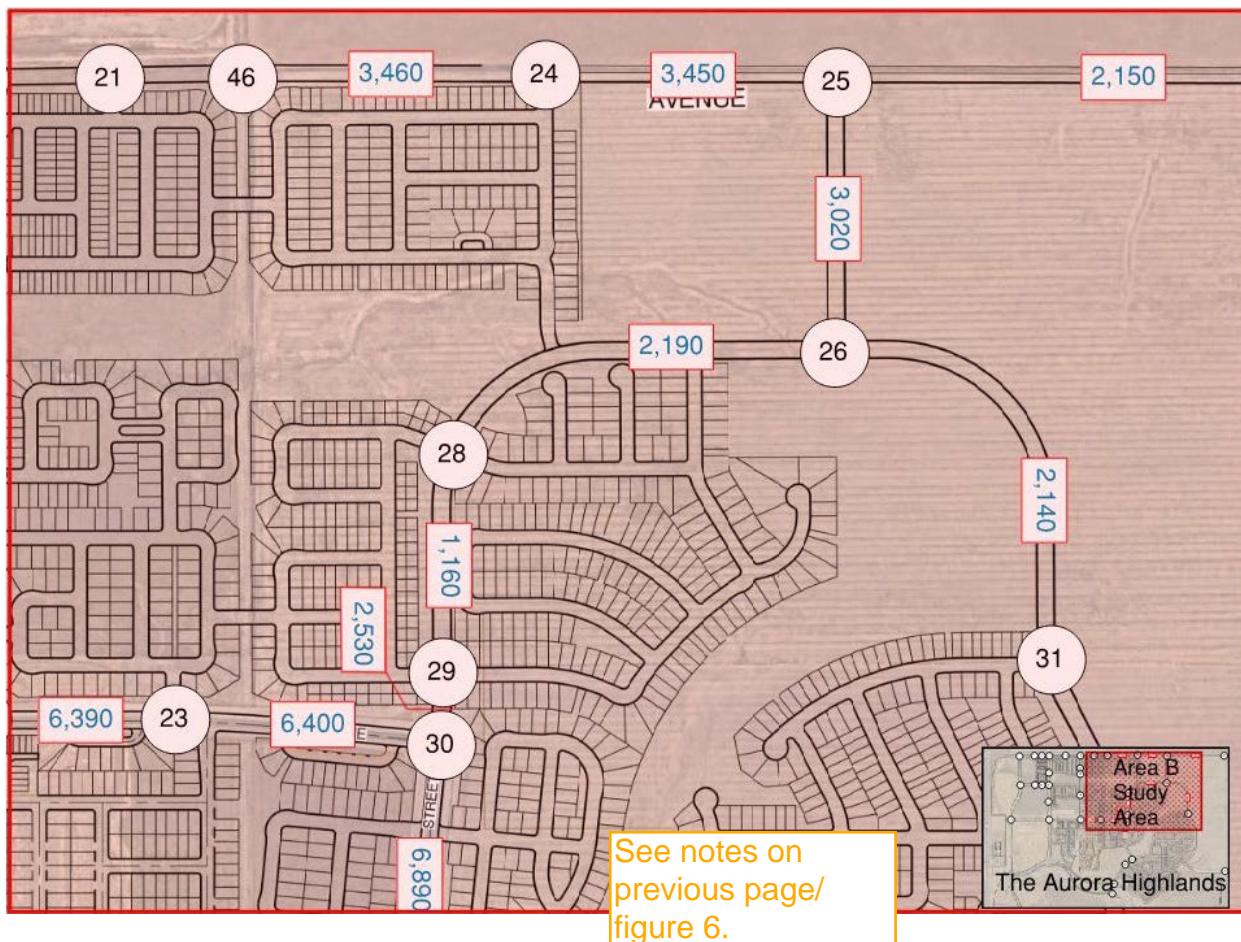

The daily site volumes on 48th are much higher in this study than in the North A TIS (by ~200%), while this site has a lower trip generation than that study. In the case of the North A TIS, the Site ADTs were reduced significantly from 1st Referral to 2nd Referral, so clarification on which are the anticipated volumes for 48th is appreciated.

Figure 6. The Aurora Highlands North, Area B Daily Site Trips

It also appears that the summation of trips on the external nodes exceeds 10k ADTs, while the total trip generation for North B is ~5,900 ADT. Some clarification would be appreciated.

Figure 7. The Aurora Highlands North, Area B Daily Site Trips

Traffic Analysis

Traffic conditions both with and without the project have been analyzed for horizon year (2040) conditions.

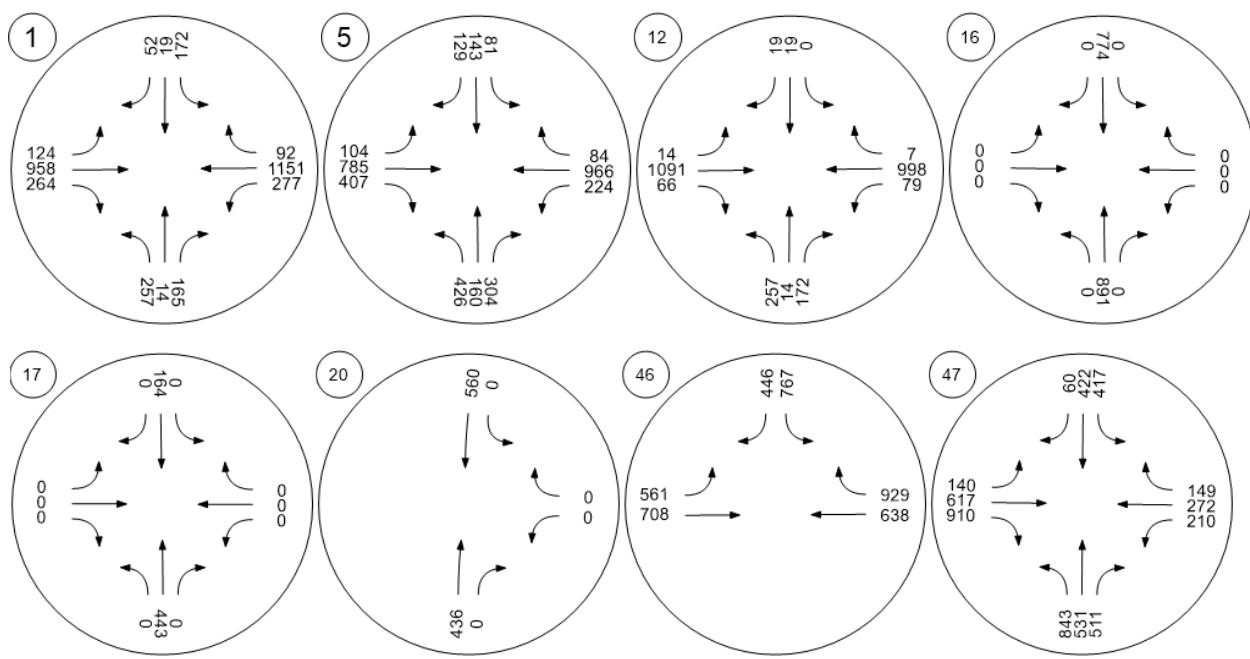

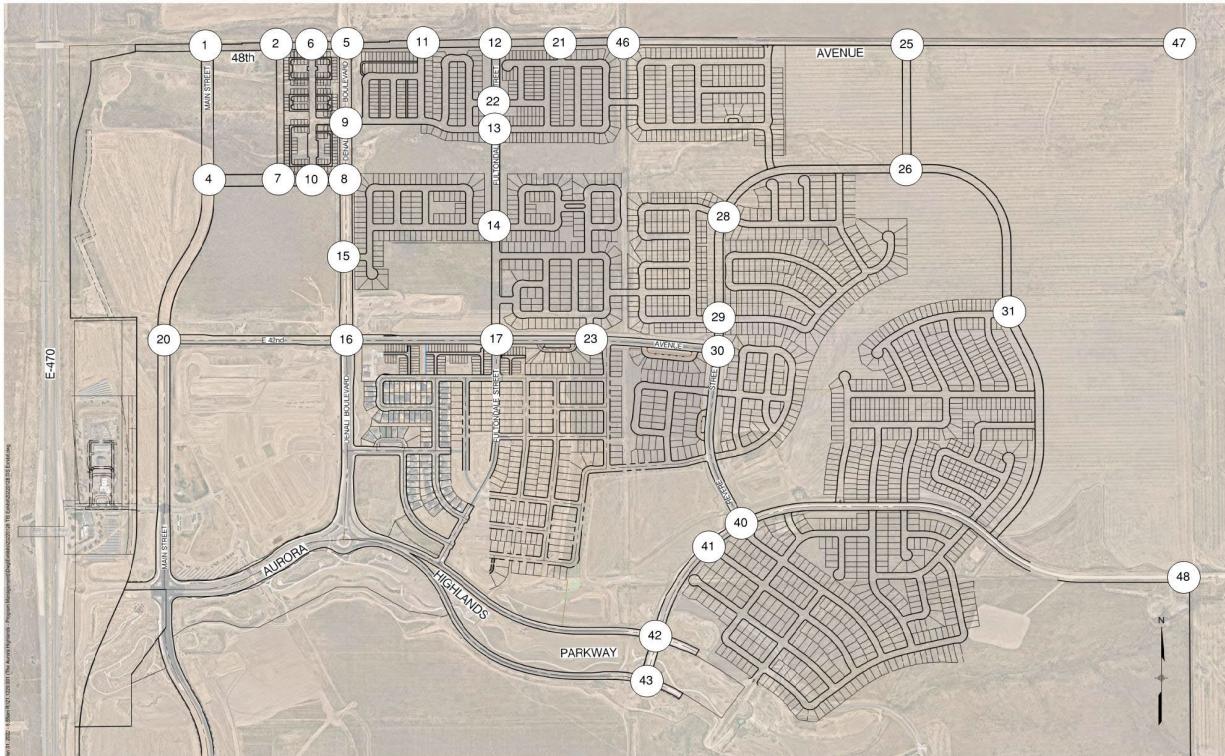

Horizon (2040) Year No Project Conditions

The horizon year traffic volumes without the Aurora Highlands project are shown in Figures 8 and 9 and daily traffic volumes are shown in Figure 10. The background volumes along 48th Avenue and Powhaton Avenue were taken from a combination of the Windler Master Plan TIS and the ATEC TIS. Roadway and intersection configurations are taken from the Aurora Highlands TIS, Windler Master Plan TIS and ATEC TIS.

Note that wasn't made on the North A TIS because the following information wasn't available at the time:

An offsite connection from 48th/Powhaton to Jackson Gap Way is anticipated, which alleviates traffic volumes on 48th from Harvest to Powhaton, and affecting both of those intersections and their analysis. Figures indicating projected ADTs for these roads have been included at the end of this PDF, as well as attached to the email delivering these comments. A review of those volume projections and it's impacts on operational results in this TIS is appreciated.

Figure 8.

The common intersections in this and the North A Study do not have volumes that agree with each other.

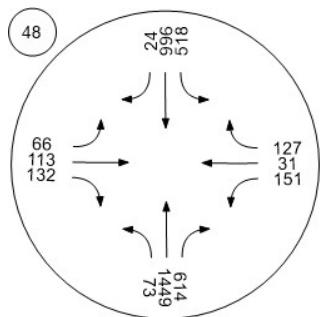

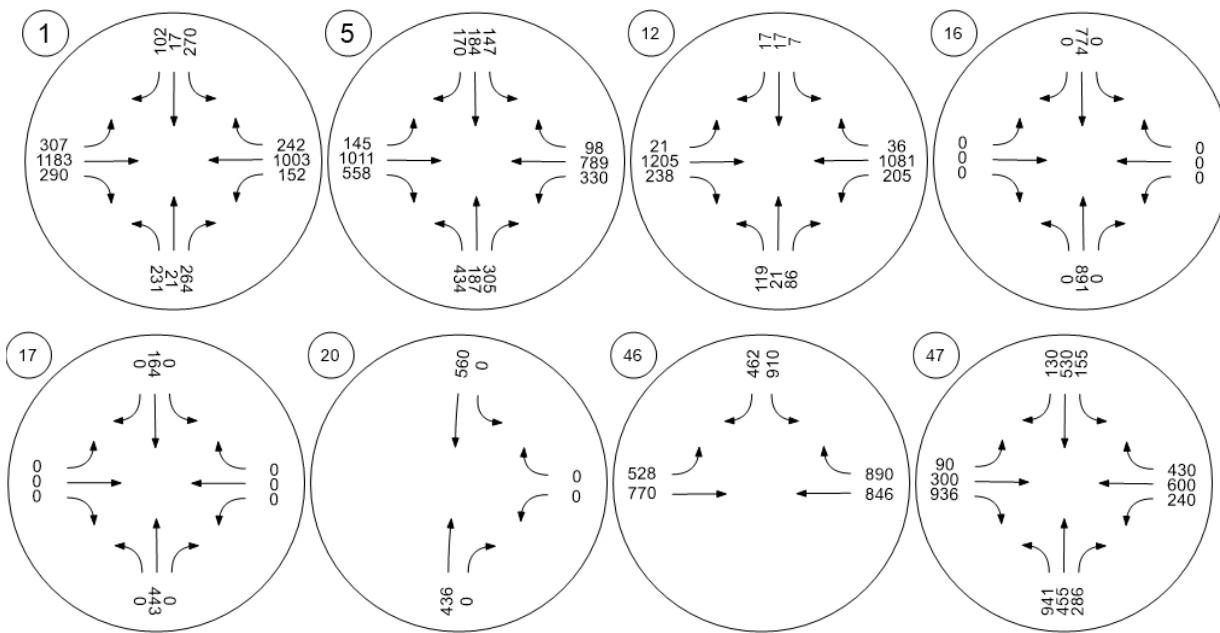

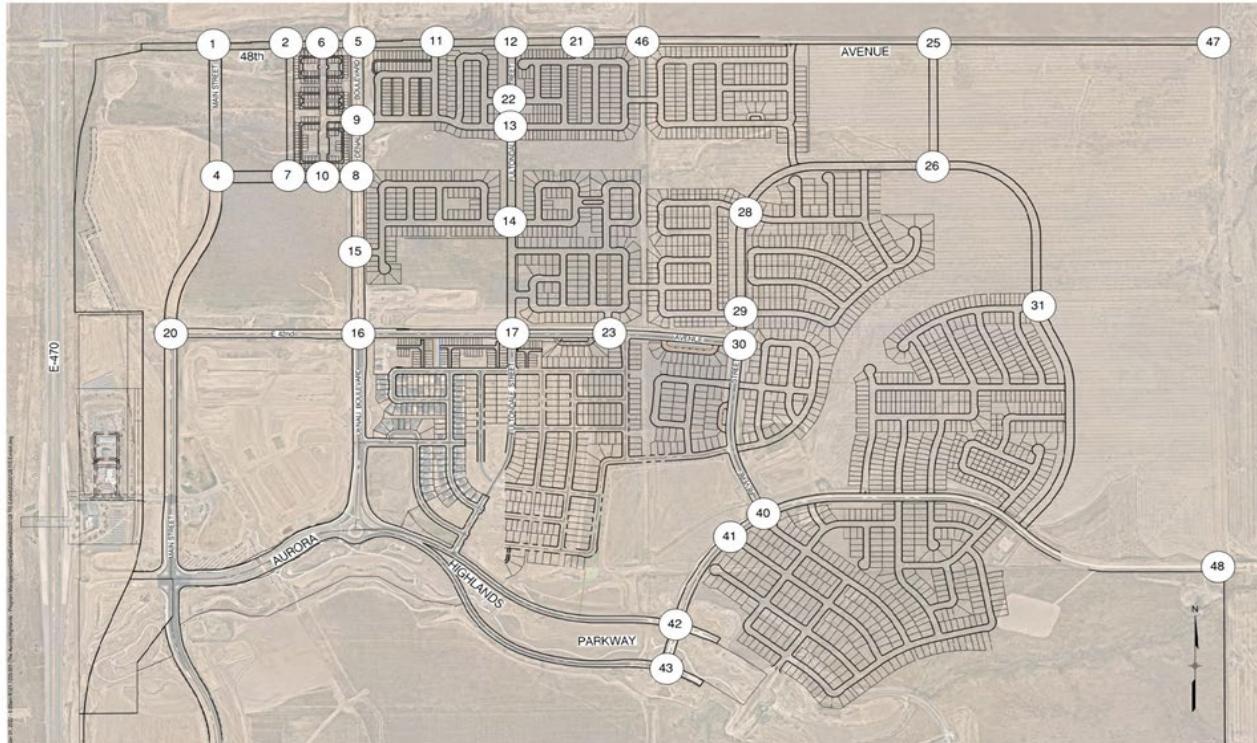

Figure 9. Horizon Year No Project Traffic Volumes (PM Peak Hour)

See comments

Figure 8.

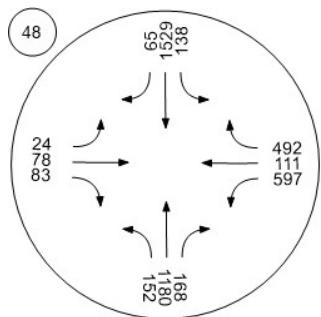

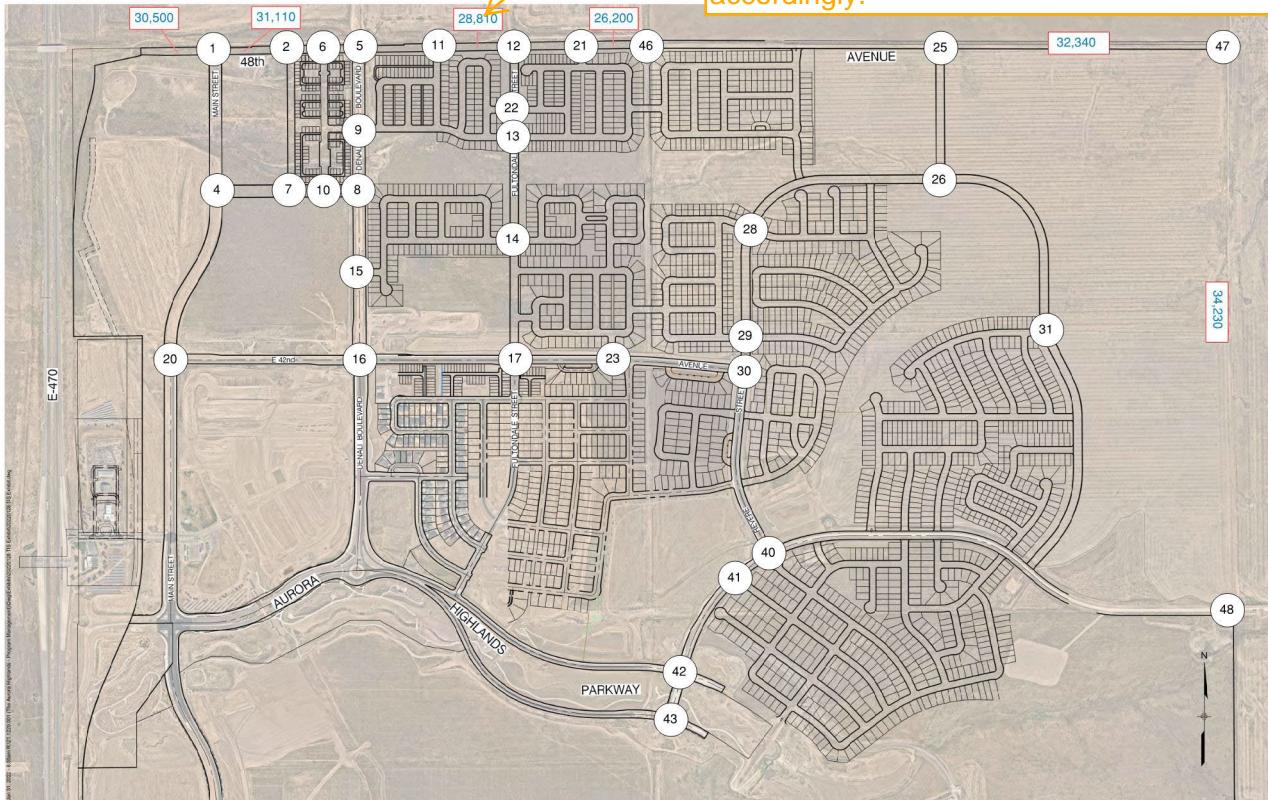

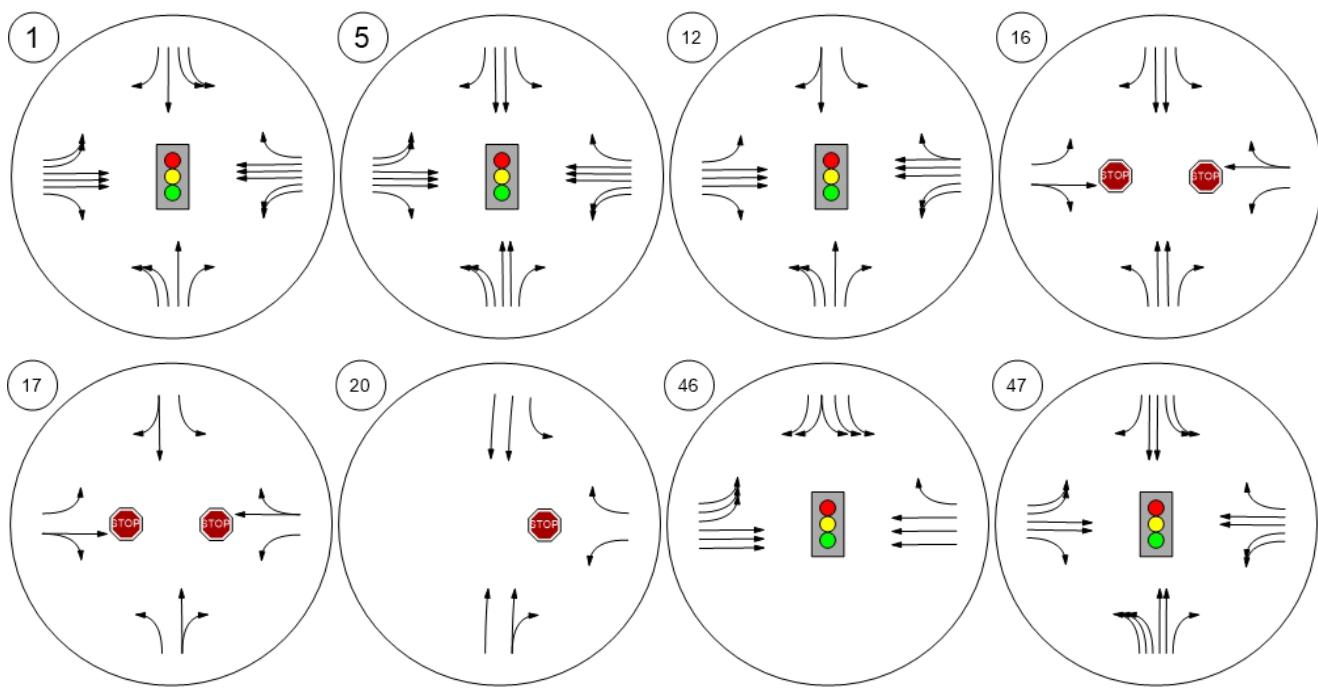

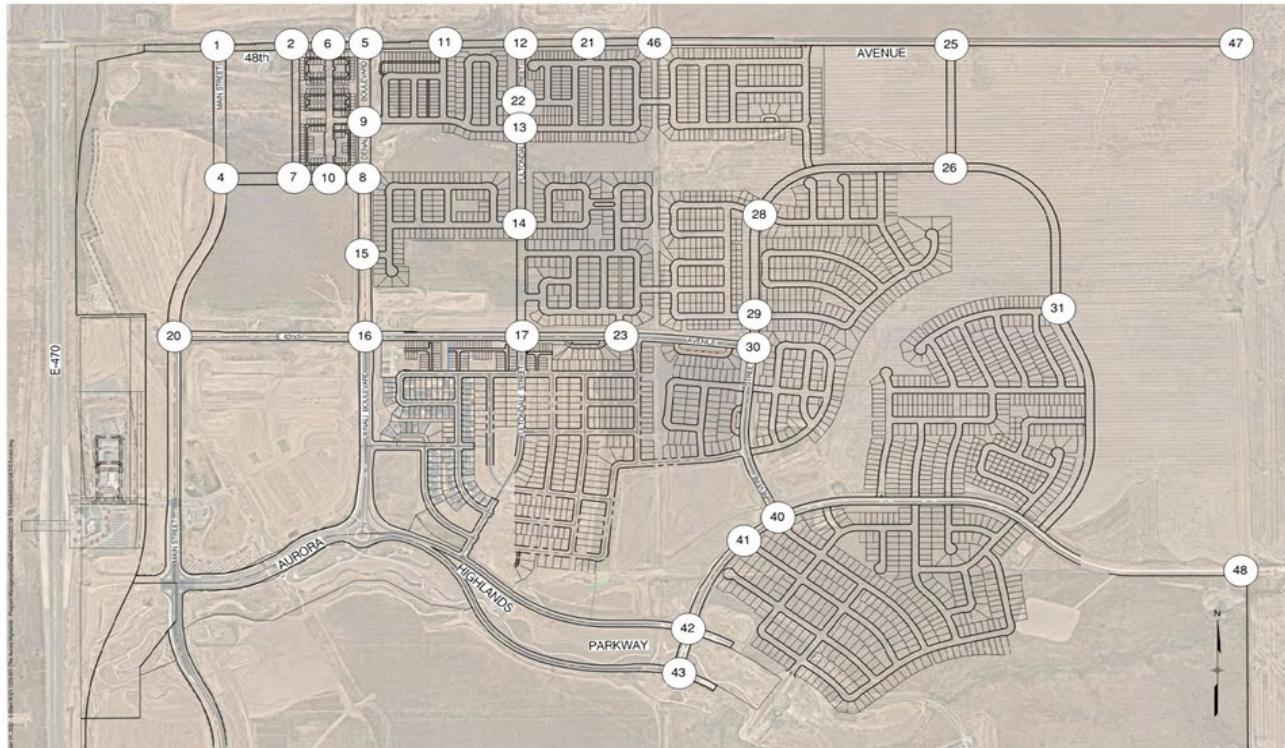

Figure 10. Horizon No Project Daily Traffic Volume

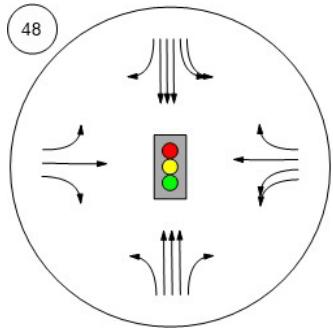

North A TIS Figure 9 (2nd Referral) shows a reduction in these ADTs from that study's 1st Referral. When resolution on those comments is achieved, please update these volumes accordingly.

The assumed intersection configurations are shown in Figure 11. The operations of the study area intersections in the build out background (no project) scenario are shown in Tables 2 and 3.

Figure 11. Horizon No Project Intersection Configurations

Intersection configurations were taken from a combination of the Windler Master Plan TIS and the ATEC TIS.

Table 2. Horizon Background Intersection Operations (AM Peak Hour)

Intersection Analysis Summary								
ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS

48	38th Parkway/Powhaton Road	Signalized	HCM 7th Edition	SB Left	0.671	29.9	C	

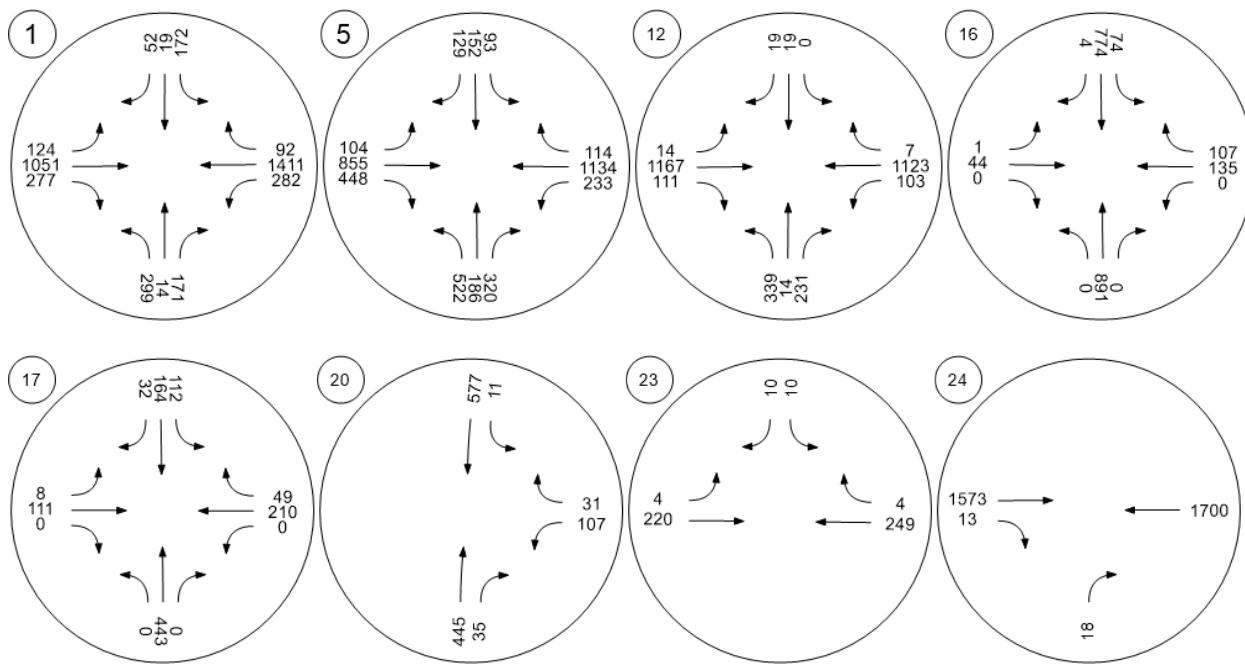

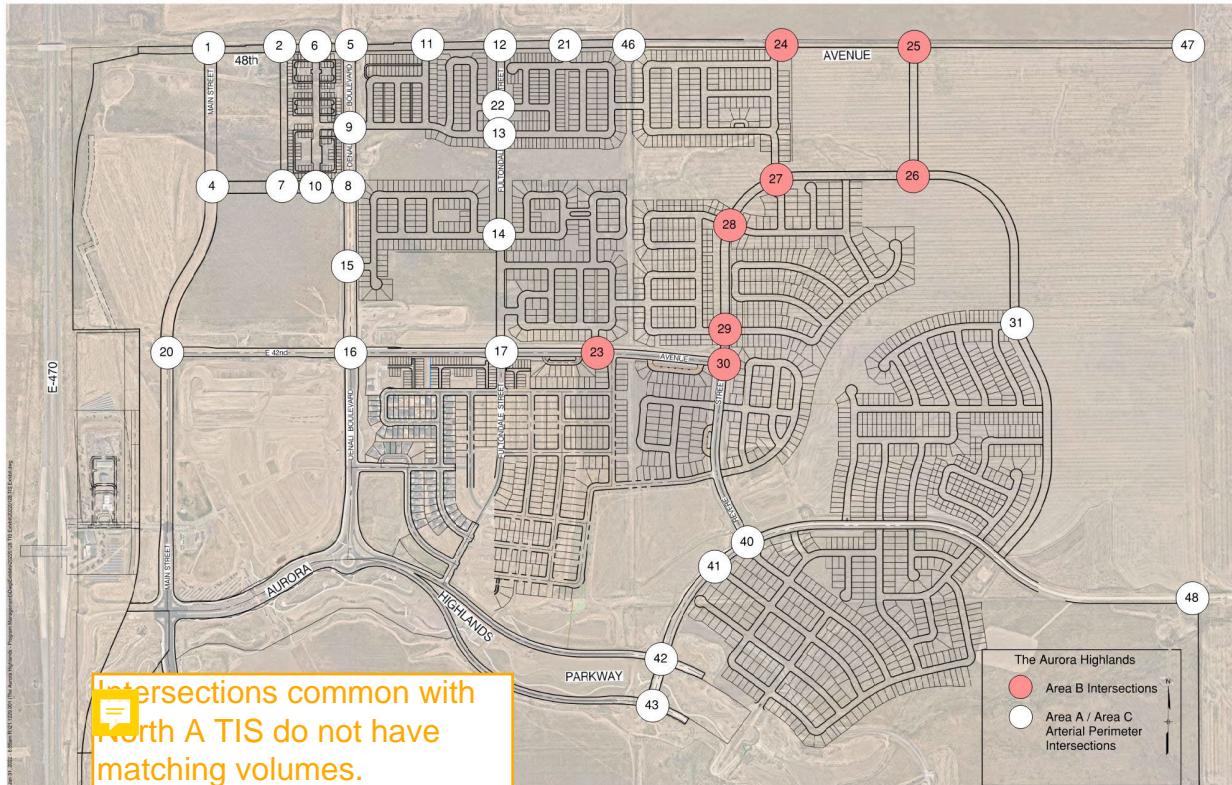

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

All study area intersections are projected to operate at an acceptable LOS in the horizon year without the project traffic as shown in Tables 2 and 3. Additionally, all the roadways will carry a daily volume of traffic that is consistent with the Aurora Highlands TIS from August 2019 and NEATS.

Horizon (2040) Year With Project Conditions

When the project traffic is added to the 2040 background traffic, the resulting AM Peak Hour, PM Peak Hour and Daily traffic volumes are as shown in Figures 12, 13 and 14.

Figure 12. Horizon Total Traffic Volumes (AM Peak Hour)

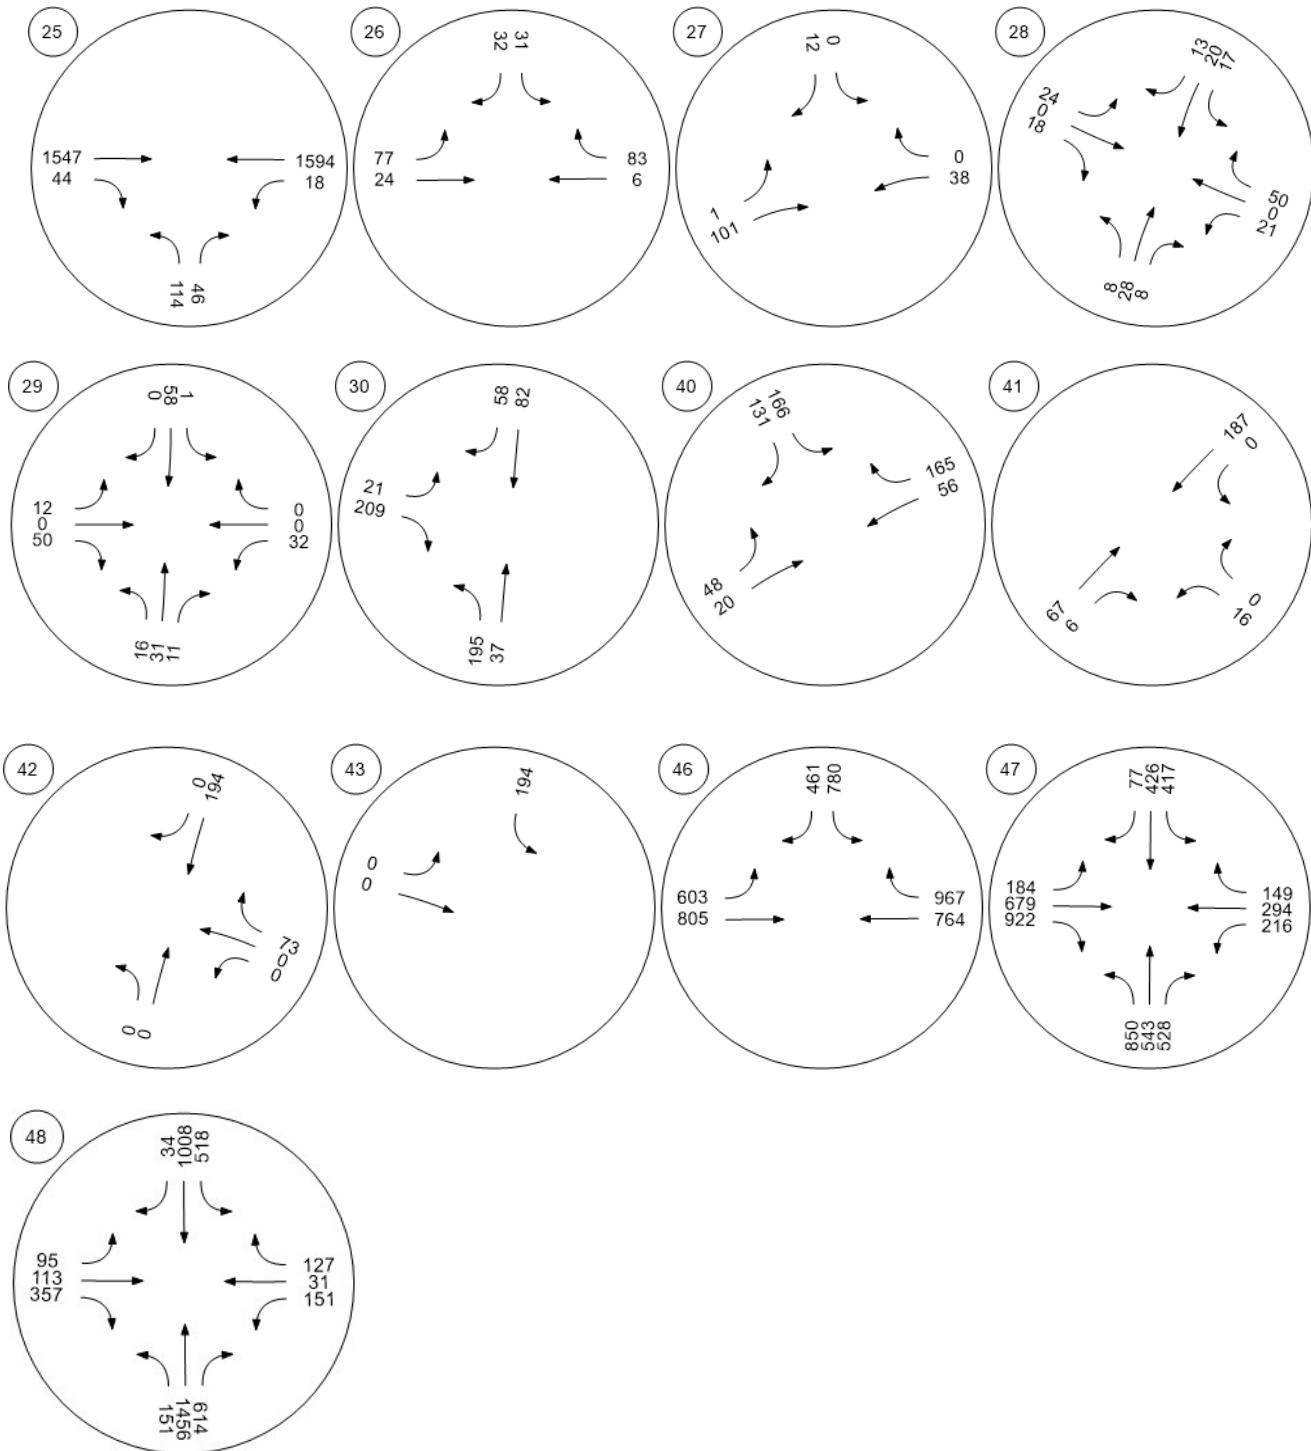

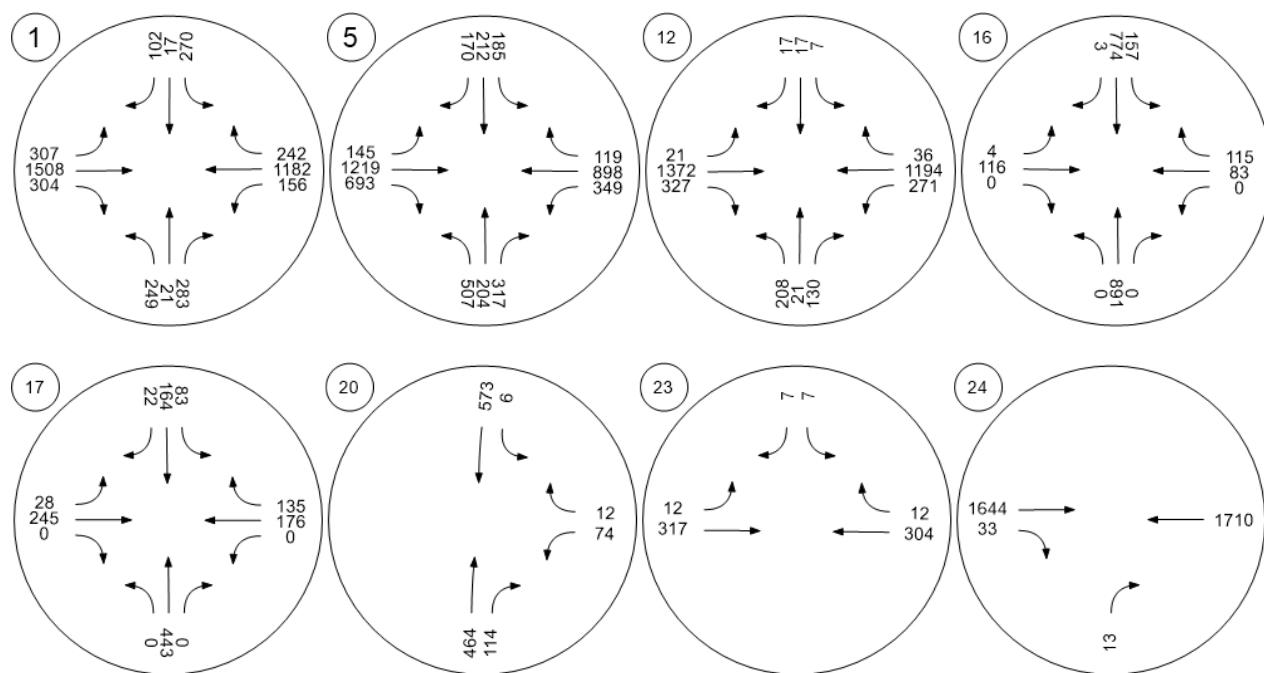

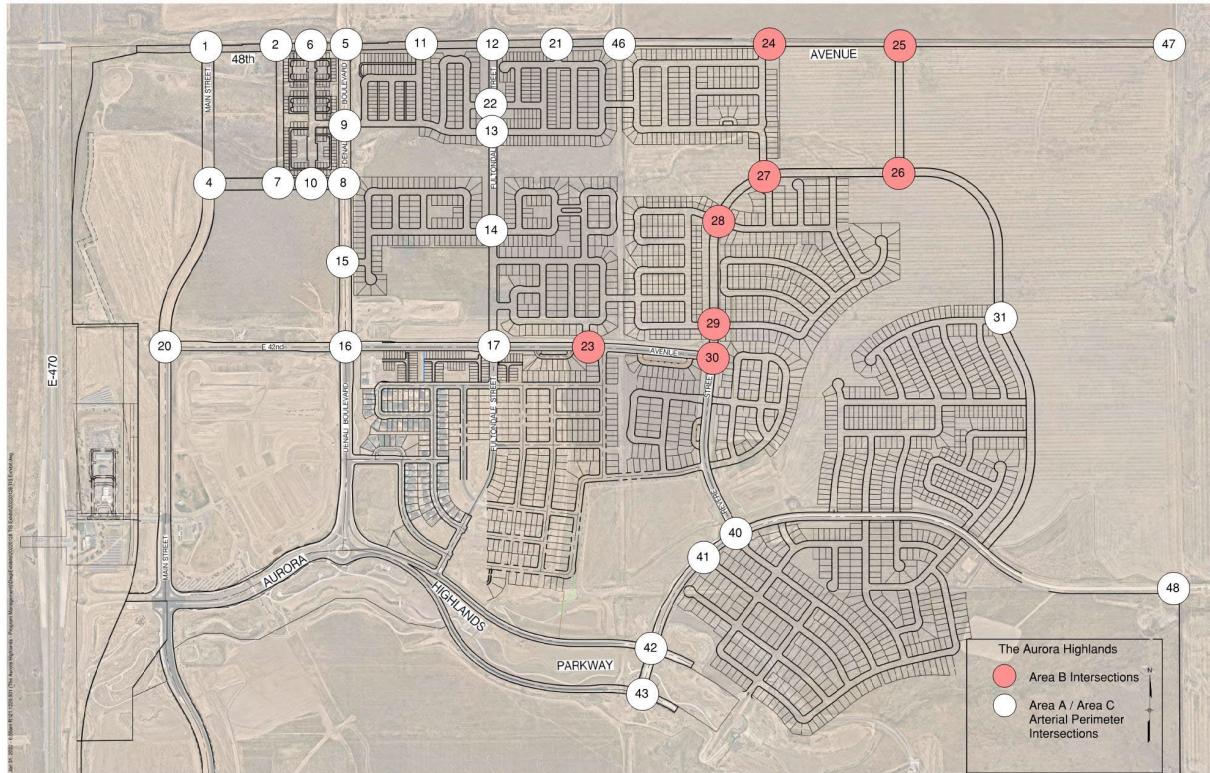

Figure 13. Horizon With Project Traffic Volumes (PM Peak Hour)

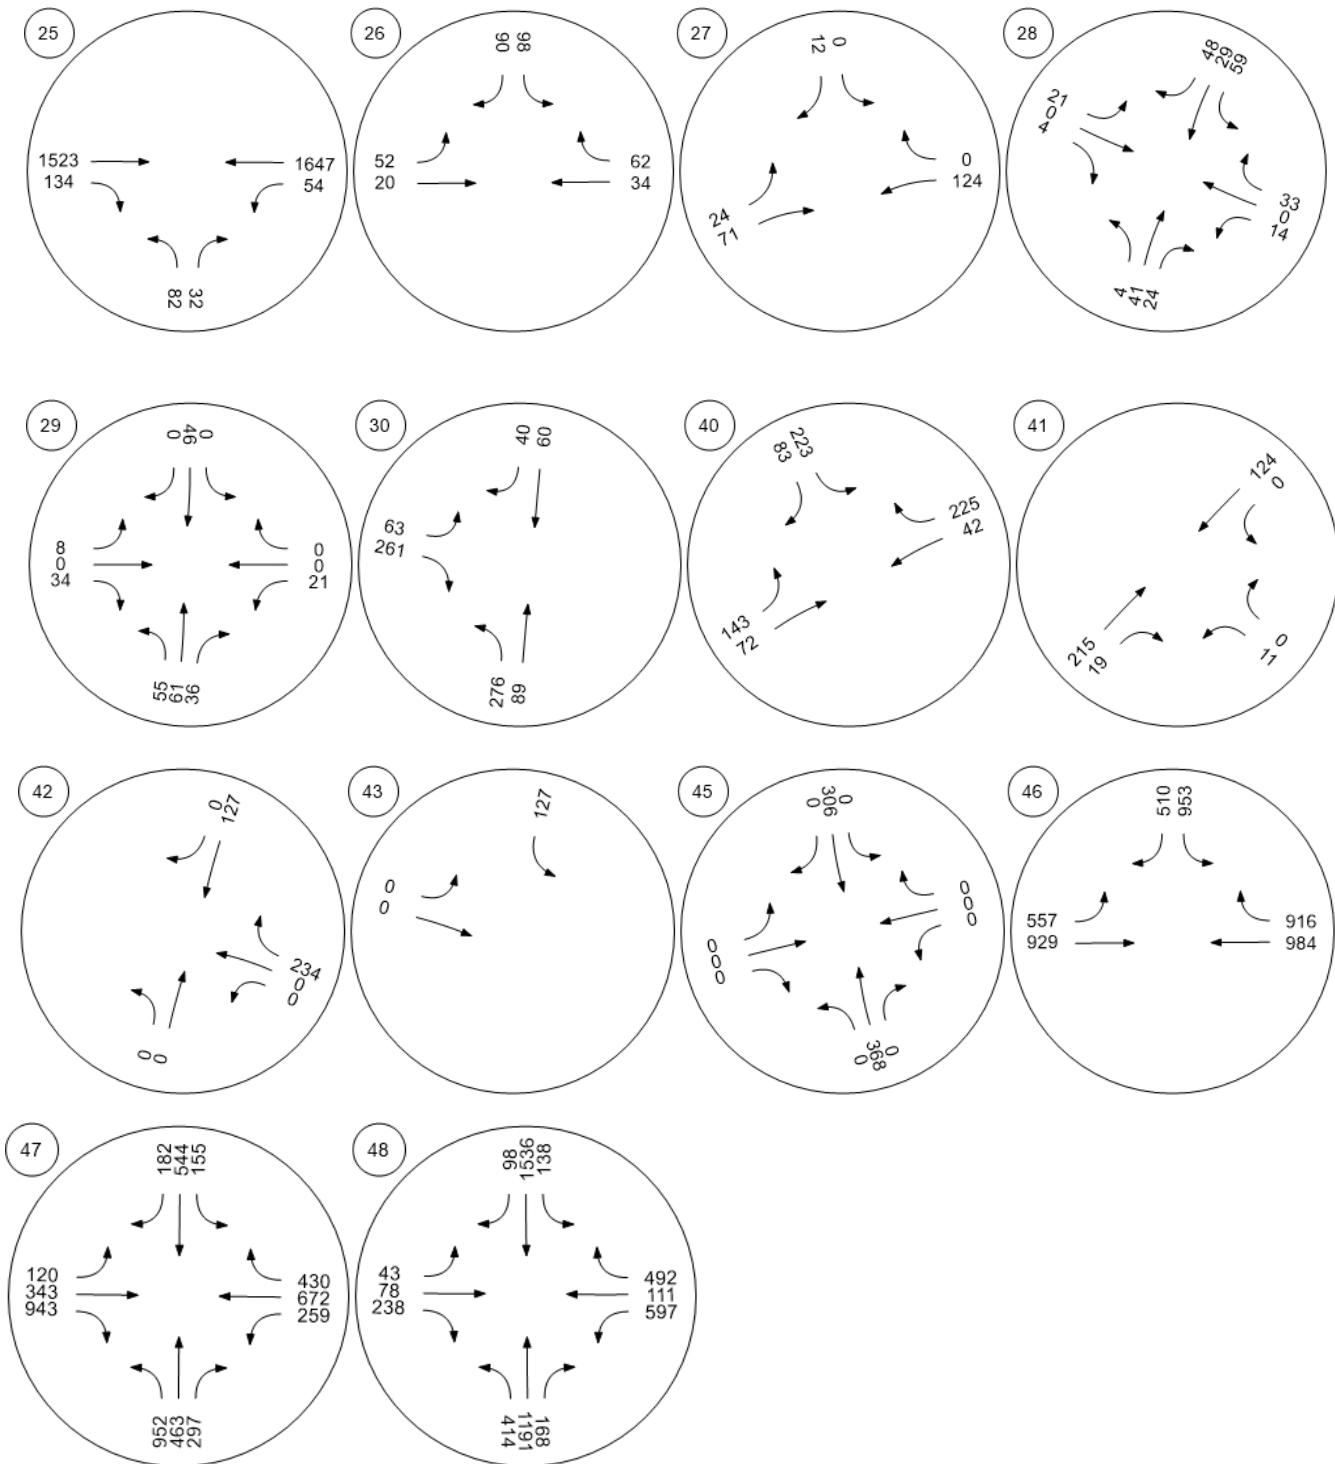

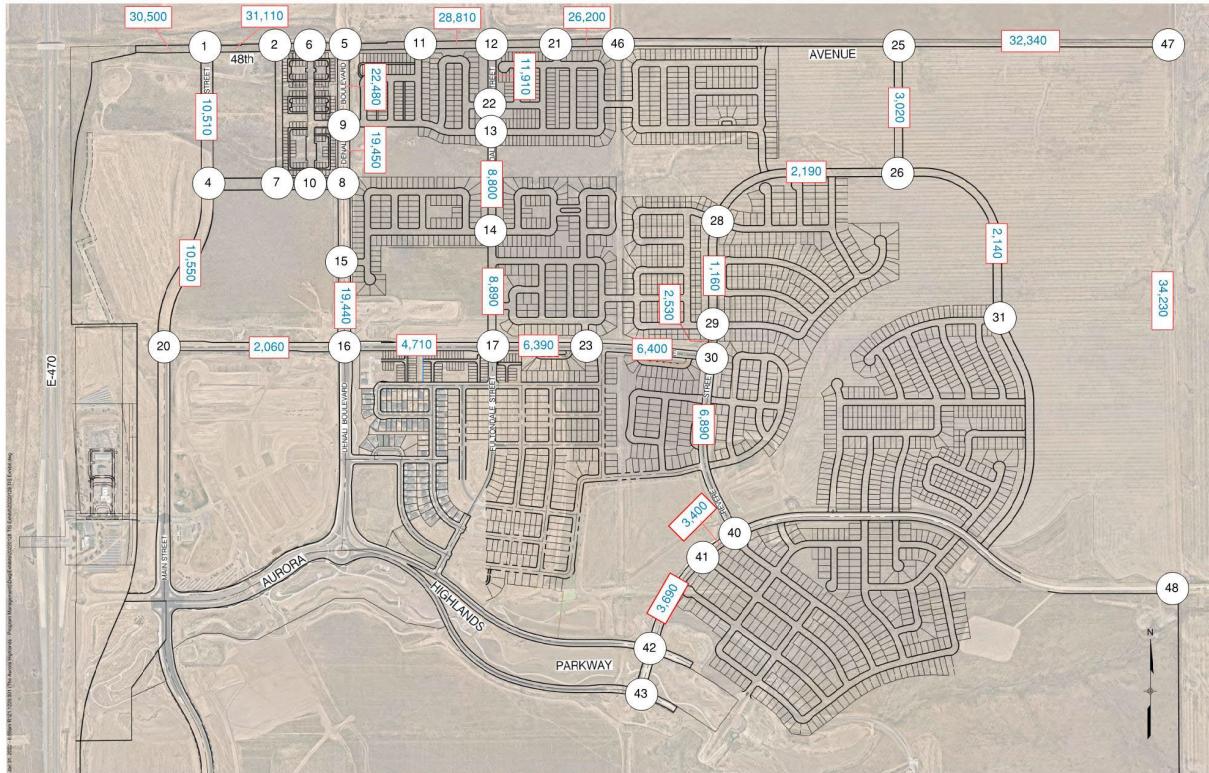

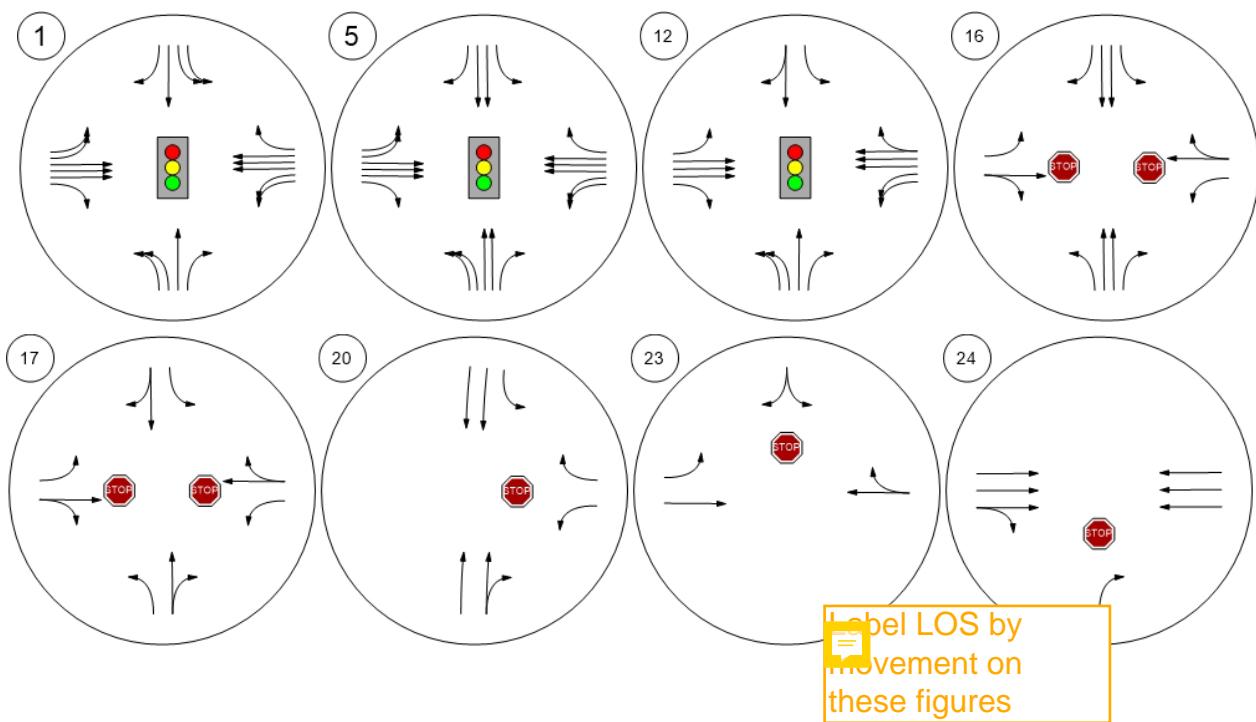

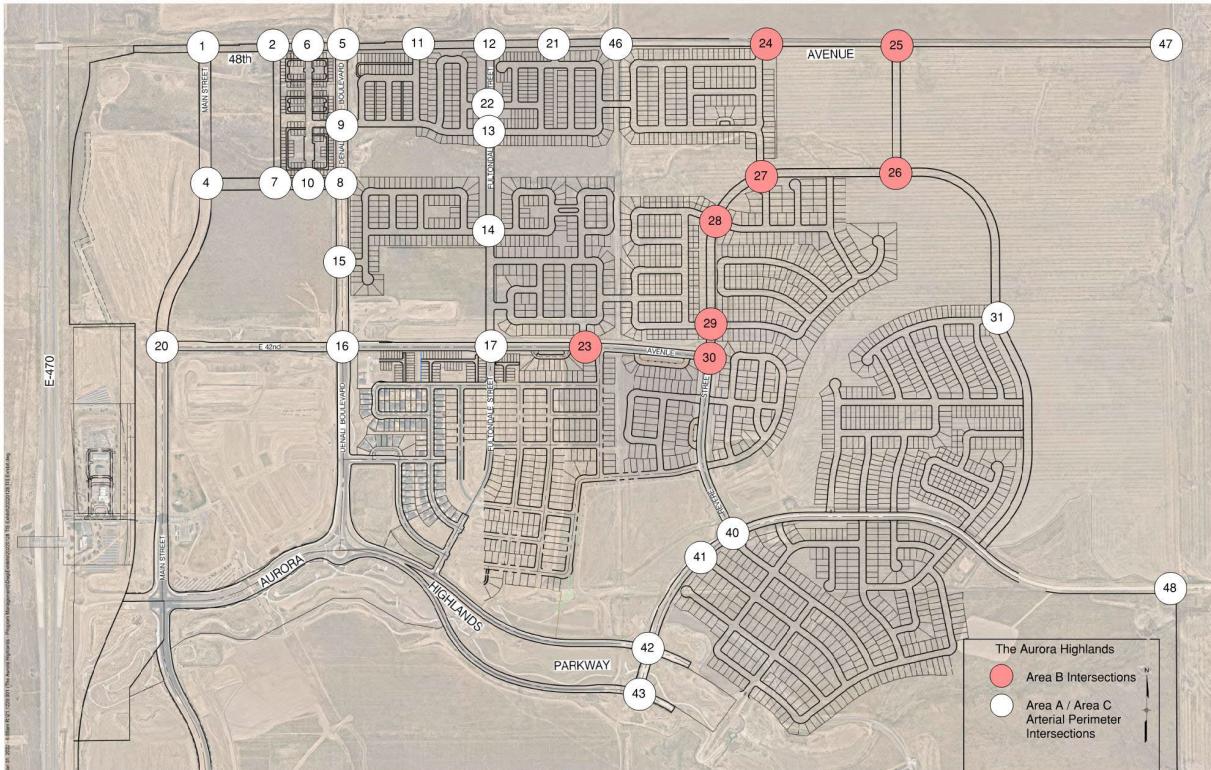

Figure 14. Horizon With Project Total Daily Traffic Volumes

Assumed intersection configurations for the study area intersections are shown in Figure 15.

Analysis of the intersections and roadways for build out conditions with the volumes and configurations shown above results in the operations shown in Tables 4 and 5.

Figure 15. Horizon With Project Intersection Configurations

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

The deficient intersections (intersections that operate at LOS E. or LOS F) are stop-controlled. At these intersections, the LOS of the worst stop-controlled movement becomes the LOS of the intersection. Often, these intersections will still operate fine if the queue for the deficient movement(s) are not very long. The following intersections will operate LOS F during the AM or PM peak hours with the project:

Intersection 16 – 42nd Avenue /Denali Boulevard- This intersection operates at LOS F during both AM and PM peak hours. This intersection is projected to meet the following MUTCD traffic signal warrants by the horizon year with the addition of project traffic:

- Eight-Hour Vehicular Volume
- Four-Hour Vehicular Volume
- Peak Hour

Provide warrant study worksheets (for Horizon year buildout) for these intersections that are recommended to be signalized.

It is recommended that a traffic signal be installed at this intersection by the completion Area B because MUTCD warrants are met. With a traffic signal installed, the intersection will operate at LOS A during the AM peak and PM peak hours

Understood. Is there a pedestrian crossing warrant (Warrant 4) or school crossing (Warrant 5) that could be applicable?

Intersection 17 – 42nd Avenue/Fultondale Street- This intersection operates at LOS F during both AM and PM peak hours. The deficient movement is eastbound left turn. The queue length is less than 3 vehicles during the peak hours. Since only peak hour warrant was met during the analyses, City of Aurora should monitor the additional warrants to be met prior to install a new traffic signal.

Intersection 25 – 48th Avenue/PA-31 Street– this intersection operates at LOS F during both the AM and PM peak hours. This intersection is projected to meet the following MUTCD traffic signal warrants by the horizon year with the addition of project traffic:

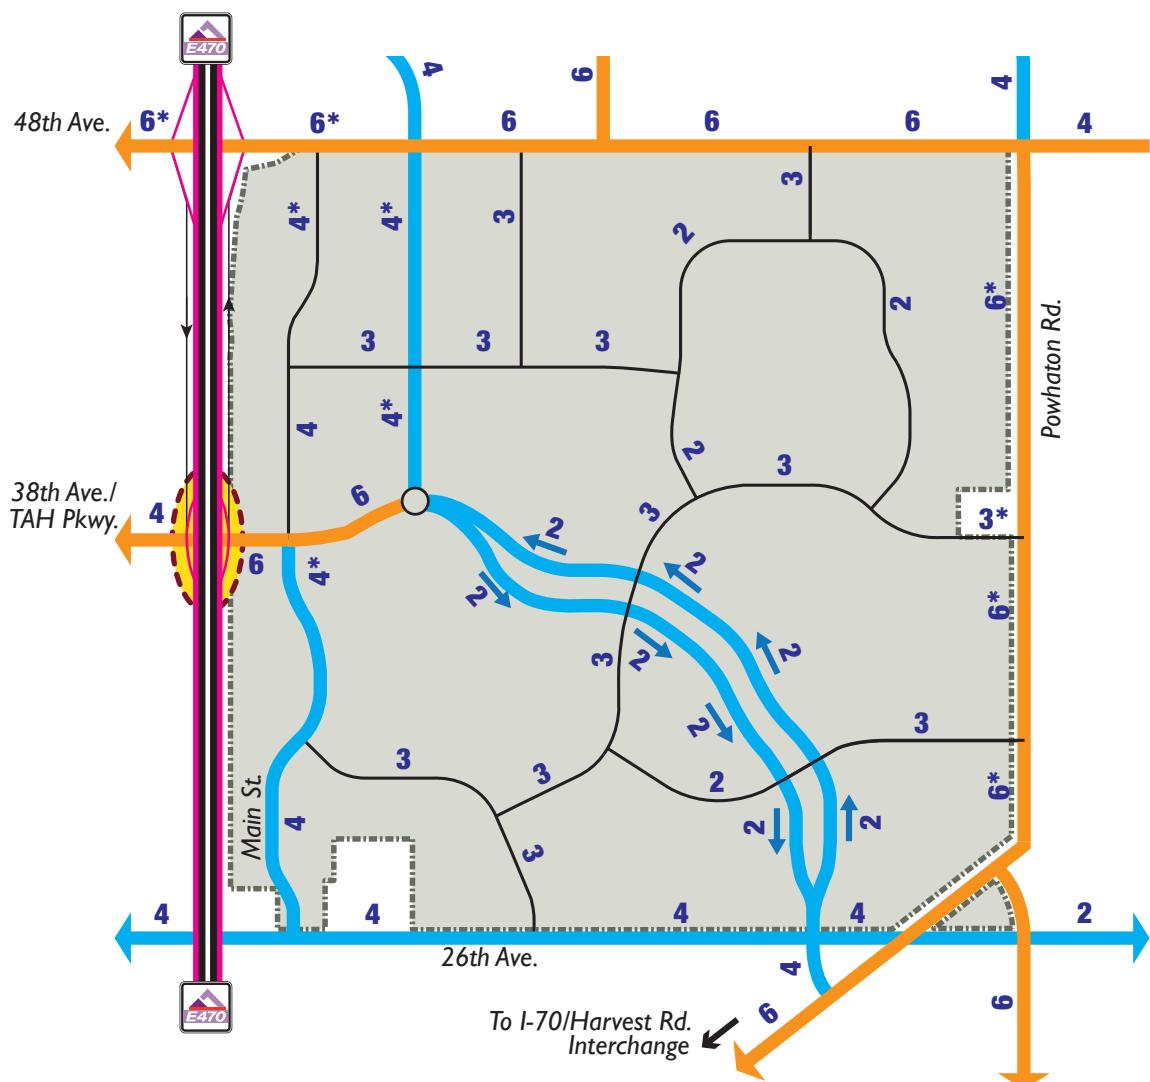

- Eight-Hour Vehicular Volume
- Four-Hour Vehicular Volume
- Peak Hour

It is recommended that a traffic signal be installed at this intersection by the completion of Area B because MUTCD warrants are met. With a traffic signal installed, the intersection will operate at LOS A during the AM peak and PM peak hours.

Conclusions and Recommendations

The development of the Aurora Highlands, North Area, Area B has been studied for traffic impacts to the assumed roadway network. The roadway network assumptions were developed from a combination of *The Aurora Highlands Traffic Impact Study, August 2019*, the *Windler Master Plan Master Traffic Study, October 2021*, and the *ATEC Traffic Impact Analysis, November 2019*. These studies were used to assume the 2040 roadway network, intersection configurations and 2040 background traffic volumes in the study area. The new project trips for The Aurora Highlands, North Area, Area B were generated using the *ITE Trip Generation Manual, 11th Edition*, distributed to the roadway network following the trip distribution assumptions from the other area studies and assigned to the roadway network. When the 2040 roadway network was analyzed with the addition of project traffic, two intersections require mitigation. Intersection 25 – 48th Avenue/PA-31 Street and intersection 16- 42nd Avenue/Denali Boulevard will both require the installation of a traffic signal.

DRAFT

Travel Demand

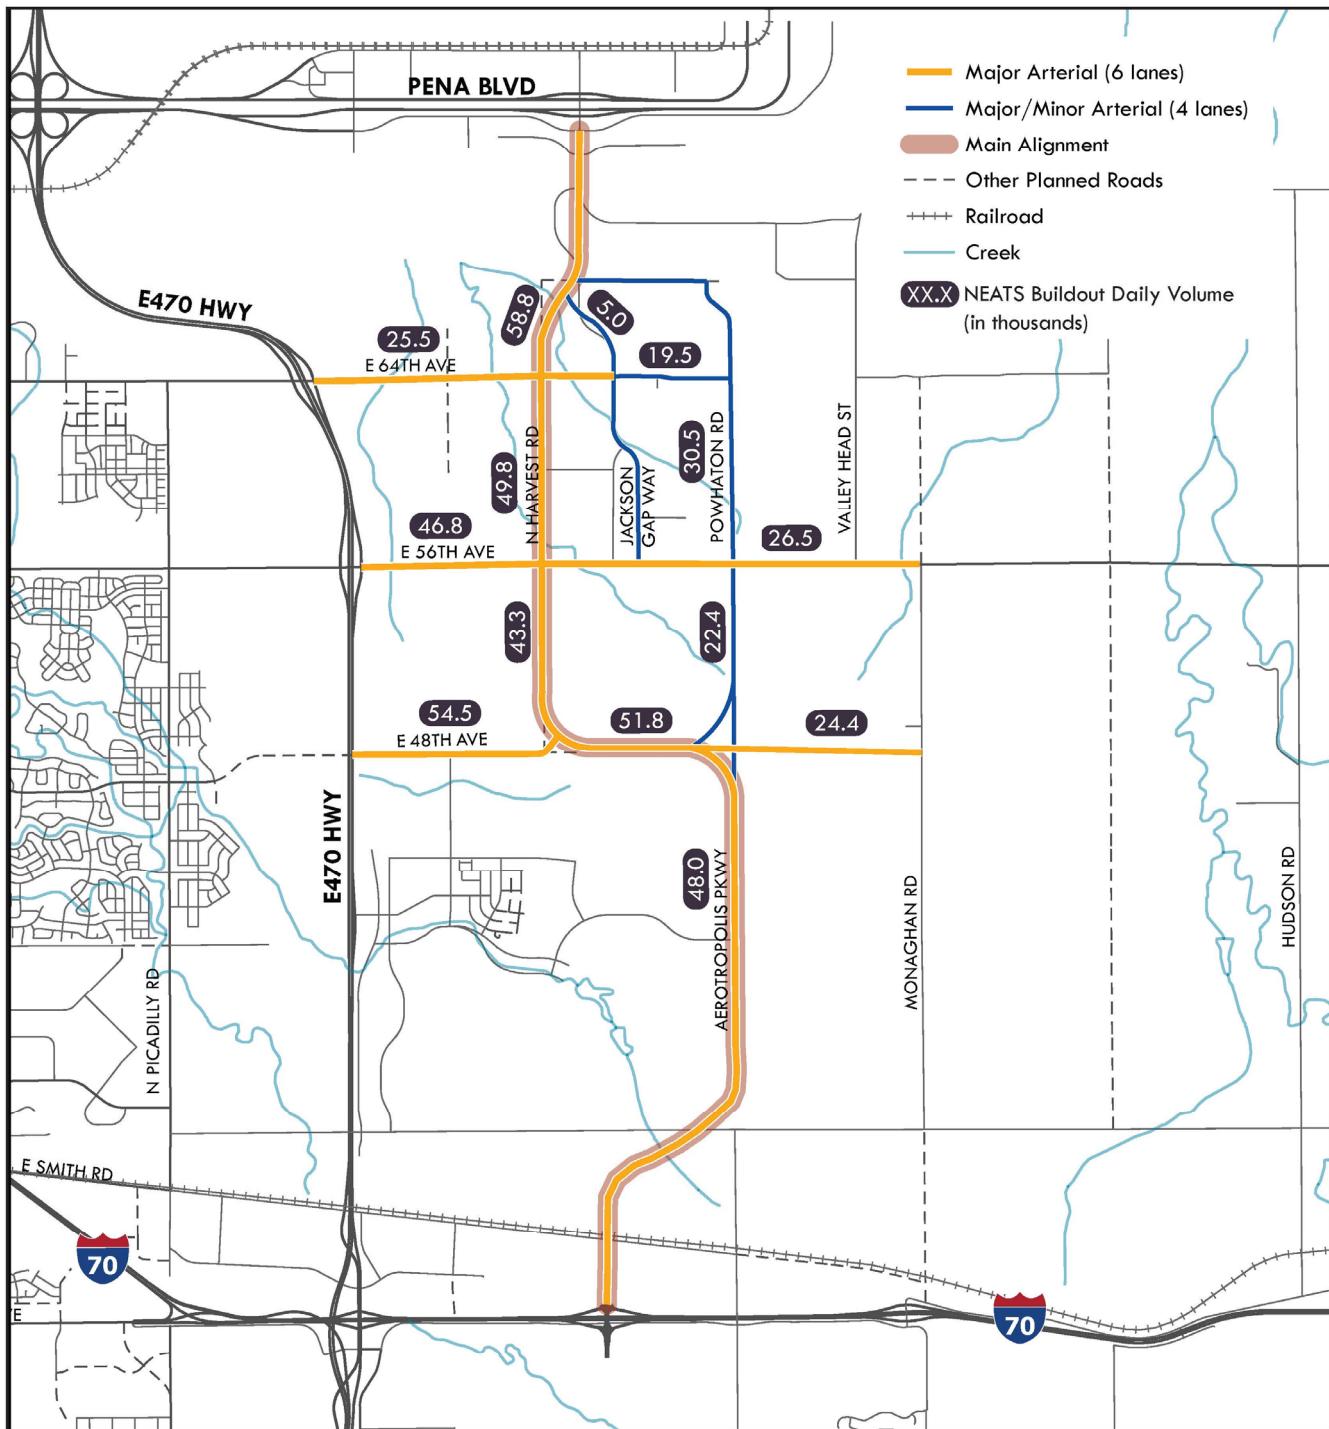

Traffic volume forecasts for the developing northeast area of Aurora were documented in the *NEATS Refresh* for the planning horizons of 2030, 2040 and Buildout. The NEATS Buildout forecasts, shown in **Figure 6**, identify projected ultimate volumes for the northeast area arterial roadway network when full development of this area is completed. Therefore, the NEATS Buildout model was utilized for this alignment study. The NEATS Buildout travel forecasts were based on the NEATS Base Alignment roadway network shown in Figure 2, with the six-lane north-south corridor alignment following Powhaton Road, 48th Avenue, and Harvest Road.

Raw Buildout traffic forecasts with the NEATS Optional Alignment were presented in a memorandum regarding the *Sun Empire Development—Effects of Optional Diagonal Connector*, dated July 12, 2021 based on a new model run by Felsburg Holt and Ullevig. With the NEATS Optional Alignment, the diagonal connection from Powhaton to Harvest Road would carry approximately 35,000 to 40,000 vehicles per day (vpd), with less volume on 48th Avenue between Harvest and Powhaton Roads than with the Base Alignment. There would also be less traffic volume on Harvest Road north of 48th Avenue, since north-south through traffic would use the new diagonal connection.

A similar Buildout forecast model run, with NEATS Buildout land use, was completed for this alignment study, with the Powhaton to Jackson Gap Way diagonal connection and corresponding roadway laneage and facility type adjustments and those raw model forecasts are shown in **Figure 7**. With the Powhaton to Jackson Gap Way Alignment, about 30,000 to 35,000 vpd would utilize the diagonal connection from Powhaton to Jackson Gap Way, so there would be less volume on Harvest Road from 48th to 68th Avenue than with the Base Alignment.

DRAFT

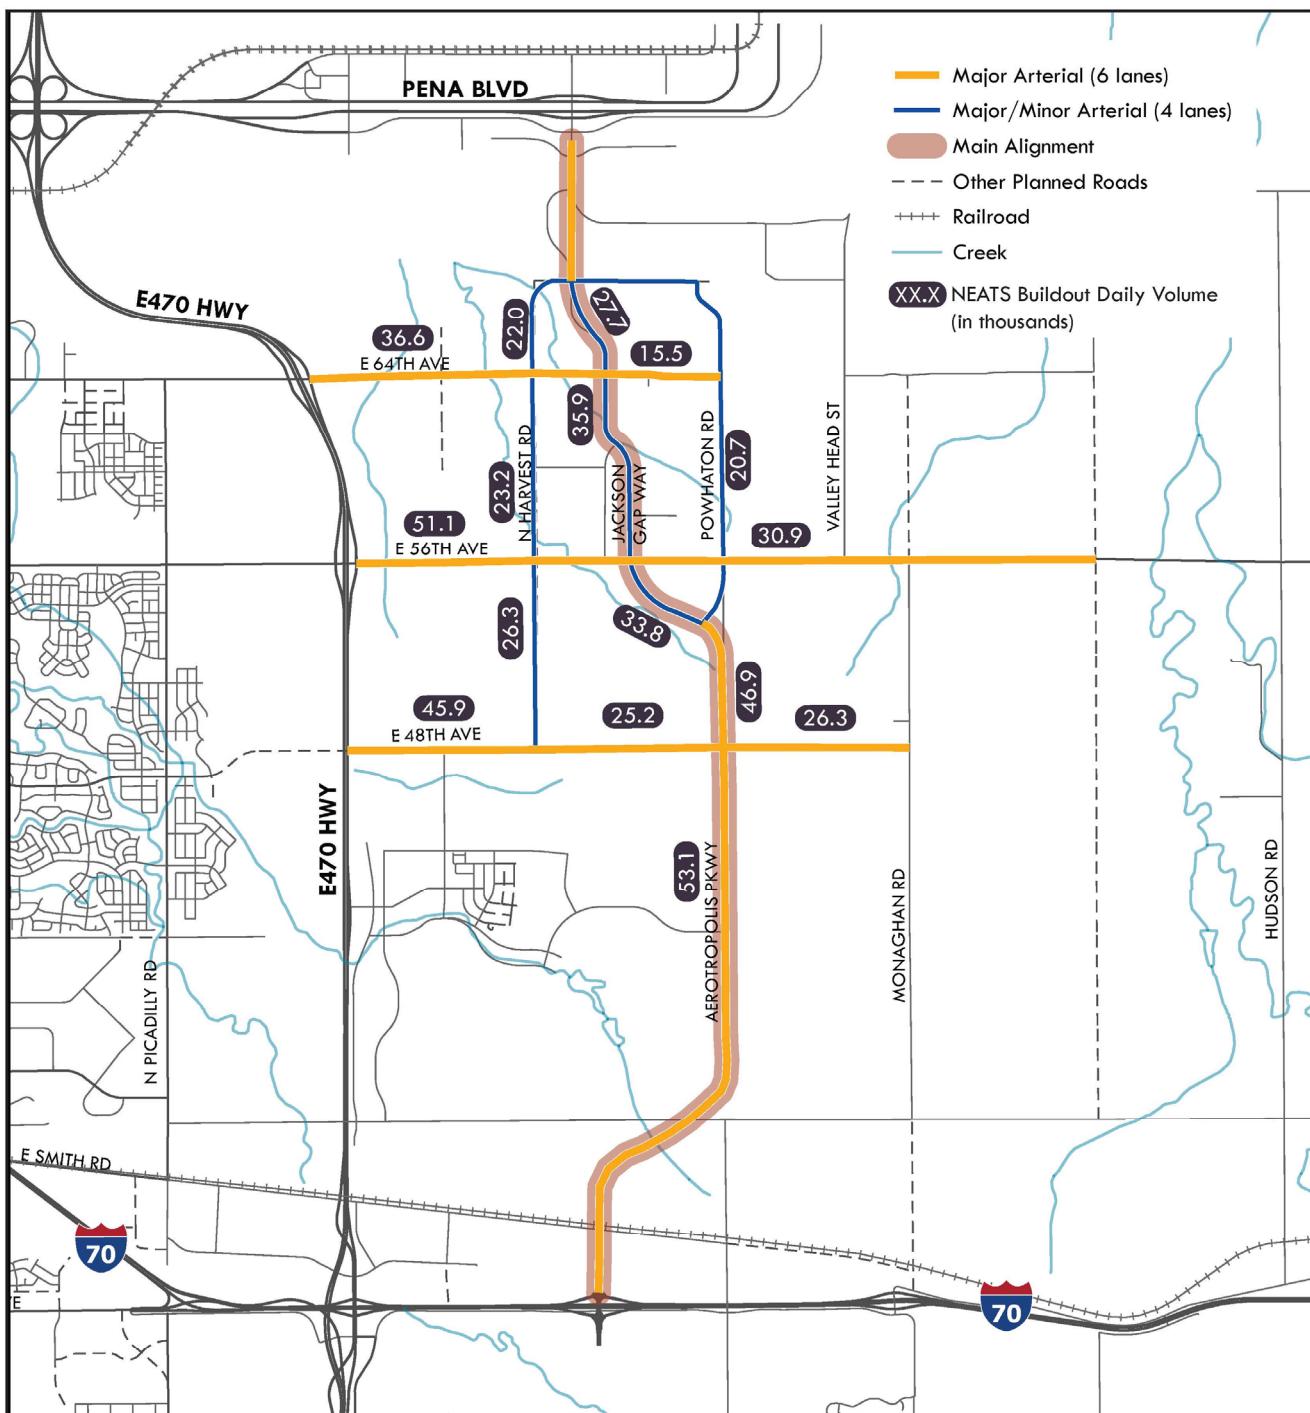

Figure 6 | NEATS Buildout Volumes

NEATS Refresh, October 2018.

DRAFT

Figure 7 | Buildout Volumes with Powhaton to Jackson Gap Way Alignment

Source: David Evans and Associates, Inc.

Background Volumes

Step 1) 2040 Total volumes (grey cells) were used to obtain the percentages of each movement

Step 2) It was assumed that MTIS 2040 background ADT on each leg of the intersection was distributed evenly between each bound of the traffic. Also, AM and PM peak each generates 10 percent of the total ADT (Orange cells)

Step 3) product of step 1 and step 2 was used as each movement's TMC

Adjusting for the new Alignment

appropriate factor was applied to each roadway and new ADTs were determined.

(the TMC obtained from the above was also adjusted based on this information)

Segment	NEATS (ADT)	New Study (ADT)	Factor
48th Ave W.O Harvest	54.5	45.9	0.842202
48th Ave E.O Harvest	51.8	25.2	0.486486
48th E.O Pawhaton	24.47	26.3	1.074785
Harvest N.O 48th Ave	43.3	26.3	0.60739
Pawhaton N.O 48th	22.4	46.9	2.09375
Pawhaton S.O 48th	48	53.1	1.10625

Powhaton/48th

The turning movements on this intersection were adjusted based on the new information regarding the alignment on Powhaton. Since it was impossible to obtain the exact turning movement's volume given the ADTs are known (a system of 12 unknowns and 4 equations) . A set of (near optimum) solutions was found to distribute the trips at this intersection (please see the figure below)

		PM											
	INTERSECTIONNUMBER	NBL	NBT	NBR	SBL	SBT	SBR	EBL	EBT	EBR	WBL	WBT	WBR
