# A. INTRODUCTION

The purpose of this report is to provide a guide to the City of Aurora (COA), the Mile High Flood District (MHFD) and Oakwood Homes (Developer), for the planning, design, and construction of drainage facilities for the Green Valley Master Plan Amendment 4 project. This report is conceptual in nature and subject to change in the Preliminary Drainage Report and Final Drainage Report phases. This report provides a comprehensive description of the project, analysis methodology utilized, and design criteria used for the associated drainage facilities. This report adheres to the requirements of the City of Aurora Storm Drainage Design and Technical Criteria Manual (City of Aurora, October 11, 2010). The Green Valley Master Plan Amendment 4 development will be referred to as "Site", "Parcel", "Project", and "Green Valley Master Plan Amendment 4" within the body of this Report.

## 1. Project Location

The Site is tributary to three major basins; Blue Grama Draw (a tributary to First Creek), First Creek Tributary T, and Second Creek within the City of Aurora. The Site is bounded on the north by East 56<sup>th</sup> Avenue; along the east by E-470, along the south by East 52<sup>nd</sup> Avenue and the future Windler development; and along the west by Piccadilly Road.

The entire Project is located within the City of Aurora and is approximately 289.1 acres in size. The Project is further described as being located within the north ½ of Section 13, Township 3 South, Range 66 West of the Sixth Principal Meridian, City of Aurora, County of Adams, and State of Colorado. The approximate latitude and longitude are 39°, 47' 11" North and 104°, 43' 37" West. A Vicinity Map has been provided as Figure 1 to depict the Project and the surrounding area. Additionally, the property is located approximately 3 miles south of the Denver International Airport (DIA). Due to current FAA design criteria, this proximity ultimately influences the proposed regional pond designs servicing the Site within the adjacent developments. Please refer to the Design Criteria section of this Report for more information.

The existing conditions for the Site are generally described as historic farmland. The existing conditions are estimated to be 2% impervious based on these land uses. The proposed and future tributary basin improvements are calculated to yield a weighted imperviousness of approximately 61.2% based upon the concept presented within Figure 2. According to the *FEMA Flood Insurance Rate Map (FIRM)* No. 08005C0061L, dated February 17, 2017 (Reference 3), the Site is a Zone X – Areas of Minimal Flood Hazard. A copy of the FIRM Panel can be found within Appendix A of this report for reference.

## 2. Proposed Development

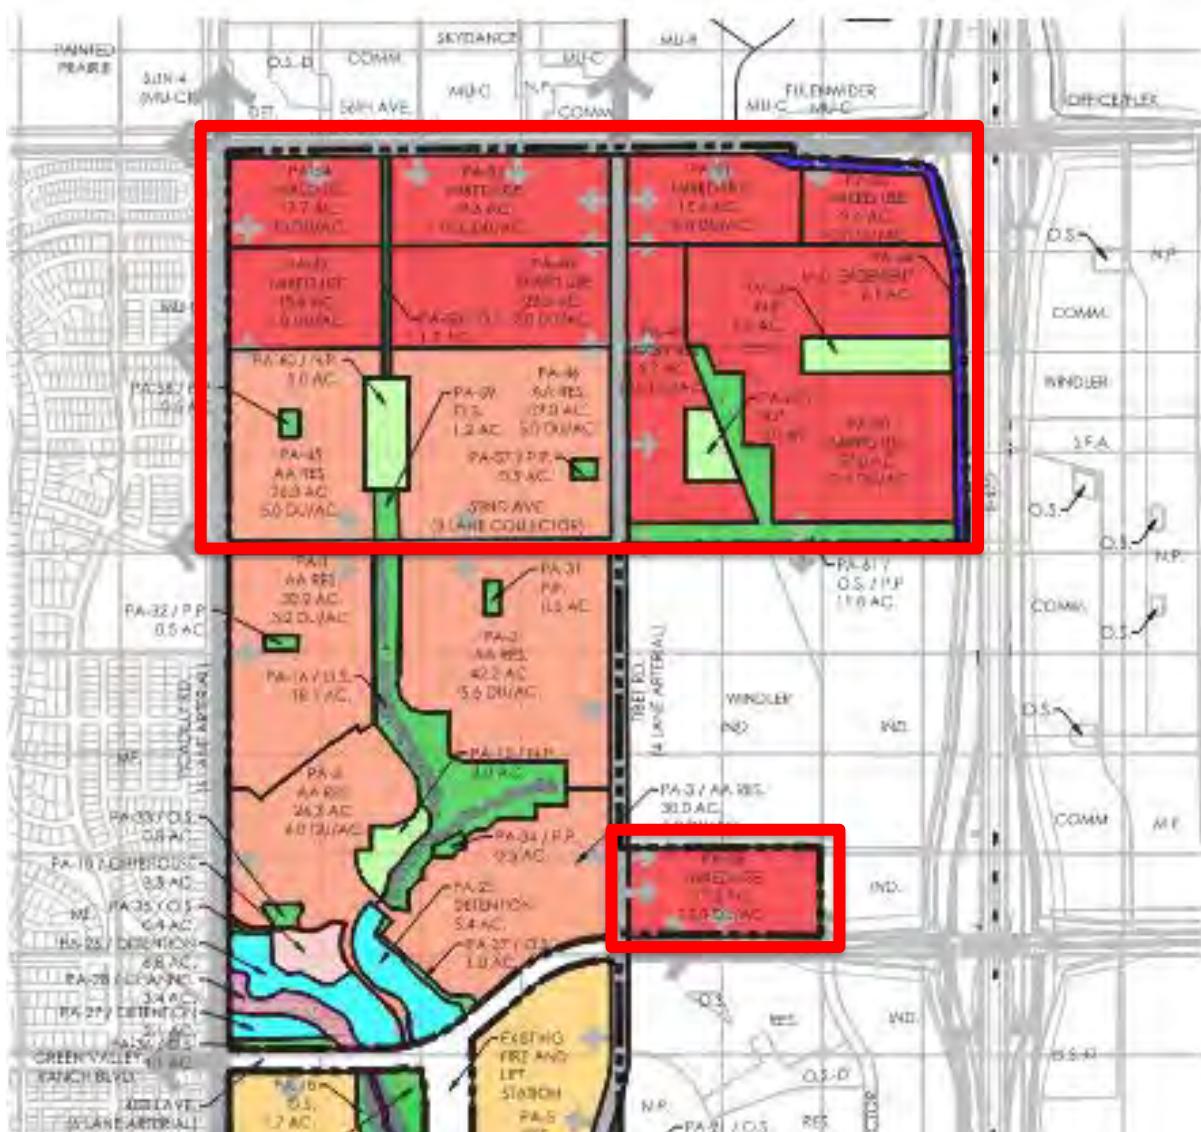

The Green Valley Master Plan Amendment 4 Master Plan is a mixed-use development consisting of residential parcels with proposed single-family homes, multi-family homes, commercial parcels, community parks, open space and associated amenities; See Figure 1 – Vicinity Map for the two parcels that generate the Green Valley Master Plan Amendment 4 project. Those two parcels consist of an approximate total acreage of 307.1 acres, consisting of an approximately 289.1-acre parcel north of Green Valley Ranch East and the Windler Developments and the Brandenburg parcel, which is approximately 18 acres, and is located at the northeast corner of the Tibet Road and 48<sup>th</sup> Avenue intersection as seen in Figure 2 – Concept Plan. The southerly Brandenburg parcel is included within tributary Basin 520, as identified within the Green Valley – Amendment 3 Master Drainage Report, and was previously a portion of Basin 581 in prior studies/Amendments. We have reviewed the assumptions therein and note that the anticipated uses for the Brandenburg parcel is a 50/50 mix of residential and commercial with a resultant, anticipated composite imperviousness (Comp I) of 60%. The information within the prior GVRE Amendments do not

Figure 1- Vicinity Map

delineate how land use within the parcels consisting of Basin 520 were accounted for, however; the overall Comp I for Basin 520 is 54%. Given the Brandenburg parcel's composite imperviousness of 60% being generally consistent with the prior Studies, it is reasonable to assume that the remaining portions of Basin 520 will have lower composite impervious values that will offset the Brandenburg parcel to meet the original 54% for the overall basin. Of note, Green Valley – Amendment 3 Master Drainage Report by Calibre Engineering, Inc., August 2021 (COA# 220095) corrected the map to depict the Brandenburg Parcel to be within the Tributary T watershed (not the Unnamed Tributary), which corrected the map to match the approved modeling.

All regional roadways shall be developed consistent with the approved PIP for the Project. Generally, the following regional roadways will be developed either by the Site or via agreement with ARTA to support the development presented herein. The south ½ section of 56<sup>th</sup> Avenue, the east ½ section of Picadilly Avenue, the north ½ section of 52<sup>nd</sup> Avenue, and the full or ½ section of Tibet Road as discussed within the PIP.

**Figure 2- Green Valley Master Plan Amendment 2 Concept Plan**

# B. HISTORIC DRAINAGE

## 1. Description of Property

The Site comprises an area of approximately 289.1 acres and is located approximately 3 miles south of the airport (DIA). The Parcel and surrounding areas are predominantly farms and open fields but are anticipated to develop into mixed uses such as single-family homes, multifamily housing, and commercial office spaces as growth continues in the area. As development occurs, it is anticipated that developers will provide stormwater detention and/or water quality for each individual site or utilize regional detention facilities farther downstream wherein developed detention is already planned, in conjunction with the City of Aurora and as outlined within the regional master plans for the area. Referenced and applicable master plans include First Creek (Upstream of Buckley Road) Major Drainageway Plan by Moser & Associates, Second Creek (Upstream of Denver International Airport) Major Drainageway Plan by Olsson Associates and Matrix Design Group, and Green Valley – Amendment 2 and 3 Master Drainage Report by Calibre Engineering, Inc.

The Site is divided into three major basins: Blue Grama Draw (a portion of the First Creek) Watershed, the First Creek Tributary T Watershed, and the Second Creek Watershed. An existing ridgeline separates the basins at the high point located near the center of the Site, and the ridgeline extends to the approximate midpoint of the north and west Site boundaries, which will be generally followed with the development of the Site.

Soils at the Site consist of primarily sandy loams, loams, and loamy sands as shown in the National Resources Conservation Service (NRCS) Web Soil Survey in Appendix A (USDA, 2017). Refer to Table 1 for more information regarding the soil classifications and hydrologic soil groups.

TABLE 1 – SOILS AND HYDROLOGIC SOIL GROUPS

ID	NAME	HYDROLOGIC SOIL GROUP	ACRES	PERCENT OF AREA
ASB	ASCALON SANDY LOAM, 0 TO 3 PERCENT SLOPES	B	26.5	9.2%
AVC	ASCALON-VONA SANDY LOAMS, 1 TO 5 PERCENT SLOPES	B	21.9	7.6%
PIB	PLATNER LOAM, 0 TO 3 PERCENT SLOPES	C	46.8	16.2%
TTB	TRUCKTON LOAMY SAND, 0 TO 3 PERCENT SLOPES	A	81.2	28.1%
TTD	TRUCKTON LOAMY SAND, 3 TO 9 PERCENT SLOPES	A	112.7	39.0%

Based on the soil classifications, the on-Site and tributary off-Site areas have soils within Hydrologic Soil Groups (HSG) A, B, and C. Type 'A' soils are identified as having low runoff potential and high infiltration rates. Type 'B' soils are identified as having medium runoff, moderate infiltration rates and a moderate erosion hazard. Type 'C' soils are identified as having low infiltration rates when thoroughly wetted, moderate runoff, and moderate to severe erosion hazard.

No portion of the Site or off-Site area is located within a 100-year floodplain as determined by the FEMA Flood Insurance Rate Map for the area. Refer to Appendix A for the FEMA map (map panel number 08005C0061L) illustrating the location of the Site.

## 2. Overall Basin Description

The Site is divided into three major basins; 20% of the Site is tributary to Blue Grama Draw (a portion of the First Creek) Watershed, 31% of the Site is tributary to the First Creek Tributary T Watershed, and 49% of the Site is tributary to the Second Creek Watershed.

### Blue Grama Draw (a portion of the First Creek) Watershed

The northwest portion of the Site is tributary to Blue Grama Draw, which is a portion of the First Creek watershed. This area's existing conditions comprise approximately 65.1 acres, delineated as Basin A in the existing conditions map. Runoff from basin drains to the northwest corner of the parcel where it collects and flows north and west to the Moffit parcel and then along East 56<sup>th</sup> Avenue to the Painted Prairie development, with an ultimate outfall into First Creek through the Blue Grama Draw. A Regional Pond (Pond 840) is planned downstream for the developed flows from this Site as detailed within the First Creek (Upstream of Buckley Road) Major Drainageway Plan.

### First Creek Tributary T Watershed

The southwest portion of the Site is part of the First Creek Tributary T watershed. This area's existing conditions comprise approximately 115.7 acres, delineated as Basin B in the existing conditions map. Runoff from this basin drains to the southern boundary of the parcel where it collects and flows south through Green Valley Ranch East and Region Detention Pond 8503C, with an ultimate outfall to First Creek Tributary T. The Brandenburg parcel was previously modeled with prior Studies for the Green Valley Ranch East project. Most recently, Amendment 3 Master Drainage Report by Calibre Engineering, Inc., March 2020 (COA# 220095) corrected the map to depict the Brandenburg Parcel to be within the Tributary T watershed (not the Unnamed Tributary), which corrected the map to match the approved modeling.

### Second Creek Watershed

The northeast portion of the Site is within the Second Creek Watershed. It flows directly to Possum Gully and then to Second Creek. This area's existing conditions comprise 108.3 acres, delineated as Basin C in the existing conditions map. Runoff from this basin flows to the northern boundary, across 56<sup>th</sup> Avenue, into Possum Gully, and ultimately into Second Creek. There is a Regional Pond, Pond PG2 planned within the Site as part of Second Creek MDP, which is anticipated to attenuate developed runoff from the Site.

# C. DESIGN CRITERIA

## 1. List of References

The City of Aurora Storm Drainage Design and Technical Criteria Manual (SDDTC) and the Mile-High Flood District (MHFD), Urban Storm Drainage Criteria Manuals (USDCM) (References 1 and 2, respectively) were the major technical references used for this report. Additionally, the Flood Insurance Rate Map No. 08005C0063L (Reference 3) was utilized to understand the regulatory floodplains existing on Site. Referenced and applicable master plans include First Creek (Upstream of Buckley Road) Major Drainageway Plan by Moser & Associates and Second Creek Major Drainageway Plan by RESPEC (References 5 and 6, respectively). The original Master Drainage Report for the site was completed by Stantec Consulting, Inc. in March 2006. (Reference 7). This report was superseded by Green Valley –Master Drainage Report Addendum by Stantec Consulting, Inc. in September 2008 (Reference 8). This Addendum revised the detention concept for the area by increasing the allowable discharge for the proposed ponds. Green Valley – Amendment 1 Master Drainage Report by Calibre Engineering, Inc. in January 2018 (Reference 9) further amended the MDR to change the limits associated with the report by removing the Aurora

Highlands development. Green Valley – Amendment 2 Master Drainage Report by Calibre Engineering, Inc. in March 2020 (Reference 10) further amended the MDR by utilizing more refined basin delineation, revising the regional detention pond scheme, and proposing a geomorphic design for Tributary T. Finally, Green Valley – Amendment 3 Master Drainage Report by Calibre Engineering, Inc. in August 2021 (Reference 11) corrected the MDR maps by portions of Basins 520 and 581 to match the previously approved modeling.

## 2. Hydrologic Criteria

Hydrologic criteria and calculations are in conformance with Section 5.0 of the City of Aurora's Drainage Criteria Manual (City of Aurora, October 11, 2010). The Colorado Urban Hydrograph Procedure (CUHP) is an acceptable method for calculating peak flows and runoff volumes according to the Urban Storm Drainage Criteria Manual (USDCM) for basins up to 3,000 acres (Urban Drainage and Flood Control District, 2016).

The Colorado Urban Hydrograph Procedure (CUHP) version 2.0.0 was used to determine existing and proposed peak runoff rates for Site drainage areas. The storm hydrographs developed by CUHP for each sub-catchment are used as the 'inflows' for the routing analysis performed using the Environmental Protection Agency (EPA) Stormwater Management Model (SWMM). EPA SWMM version 5.1.013 was used to determine peak discharge rates at each node and the required volume for each proposed pond.

Due to the Site's proximity to the Denver International Airport (DIA), the FAA design criteria per FAA Advisory Circular 150/5200-33B Hazardous Wildlife Attractants on or Near Airports is applicable. This requires detention ponds to drain within 48 hours. It is assumed that off-Site, regional ponds servicing the Site will be, or were designed to provide water quality and the 10-year and 100-year design volumes for those events and drain within 48 hours. Any temporary detention and water quality facilities required to service the Site due to downstream phasing will meet this requirement. Those temporary pond volume(s), if applicable, will be the 100-year volume as calculated by the EPA-SWMM model plus the water quality capture volume as determined by the UD-Detention workbook,  $V_{Total} = V_{100-SWMM} + \frac{1}{2} W_{QCVUD-DET}$ .

For this report, the design frequencies analyzed were the 2-year (minor), and the 100-year (major) storm events. The 1-hour rainfall depths from NOAA 14 are identified in Table 2 below.

TABLE 2 – 1 HOUR POINT RAINFALL DEPTHS, NOAA 14	
STORM EVENT	1-HOUR RAINFALL DEPTH
2-YEAR	0.85
5-YEAR	1.13
10-YEAR	1.39
25-YEAR	1.78
50-YEAR	2.12
100-YEAR	2.49

Proposed sub-basin characteristics were developed and used for the computation of peak flow rates implemented within the hydraulic evaluation. CUHP and SWMM model inputs and outputs are presented within Appendix B. The procedures and methodology follow the City of Aurora and MHFD Criteria outlined in References 1 and 2, respectively.

### 3. Hydraulic Criteria

The hydraulic criteria and calculations used for this analysis conform to Section 6.0 Hydraulic Criteria of the City of Aurora's Drainage Criteria Manual (City of Aurora, October 11, 2010) and the UDFCD Drainage Criteria Manuals (Urban Drainage and Flood Control District, 2016).

On-Site and downstream regional drainage infrastructure is planned to receive runoff from this Site. This includes the existing Regional Detention Pond 8503C for the First Creek Watershed and then two planned ponds for Blue Grama Draw and Second Creek: namely Pond 840 and Pond PG2, respectively. As it relates to these three ponds, two options or design constraints are contemplated, as follows.

#### Development Option 1

- Presumes that Ponds 840 which attenuates runoff for the First Creek Watershed/Blue Grama Draw (Basin A) **WILL** be constructed in advance of the Mixed-Use development within the individual tributary basins within the Green Valley Ranch East Amendment area.
- This option recognizes and confirms that runoff from the Blue Grama (a portion of First Creek) watershed has been anticipated within the master planned Pond 840. Based on the information provided in the Moffit and Sky Dance Master Drainage Report, the anticipated tributary area of Blue Grama was 64 acres and had an imperviousness value of 73%. The development planned herein that is tributary to the Blue Grama watershed, is approximately 56.2 acres with an anticipated developed composite imperviousness of 71.6%. Both values are below the Sky Dance Master Drainage Report assumptions. Furthermore, the Sky Dance Master Drainage Report states that it isn't providing water quality volume for our Site, however; the downstream regional pond 816 does. The Green Valley Ranch East design team will work with the downstream developers, City, and MHFD as Pond 840 undergoes final design and construction. In the event that the portions of the Green Valley Ranch East development precede the construction of Pond 840, Option 2 will be triggered, as discussed below.
- This option recognizes and confirms developed runoff from the Site within the Second Creek Watershed (Basin C) has been anticipated within the master planned Pond PG2, which will be constructed on-Site with the proposed development activities. This project's design team will work with the downstream developers, City, and MHFD as Pond PG2 undergoes design and construction to coordinate the Pond PG2 outfall off-Site to Possum Gully. Since the PG2 pond will be on-Site, only the Pond's release rate was considered as a design constraint. The maximum release rate from Pond PG2 shall meet the approved RESPEC master plan for the area of 368.8 cfs for a 100-year storm.
- This option recognizes and confirms that runoff from First Creek Tributary T Watershed (Basin B) has been anticipated within the previously constructed Pond 8503C. Pond 8503C was designed per the Green Valley Ranch East Regional Drainage Improvement Plans, which anticipated a 46% impervious value for the 137-acre watershed. The proposed Basin within this Study updates the anticipated composite imperviousness to 44.5% and the overall area to 89.6 acres. These updates are due to the proposed Site have been confirmed and accounted for in the design on Pond 8503C.
- The 18.9-acre parcel located at the northeast corner of 48<sup>th</sup> Avenue and Tibet Road, known as the Brandenburg Parcel, was previously modeled within the Green Valley Ranch East Master Drainage Study(s), by others. The Brandenburg Parcel is within the First Creek Tributary and is portion of the previously modeled Basin 520. Basin 520 was modeled as being 185 acres and with a composite imperviousness of 64%. The Brandenburg Parcel is anticipated to be developed consistent with the previously modeled assumptions.

#### Development Option 2

- This option recognizes and confirms that runoff from First Creek Tributary T watershed (Basin B) has been anticipated within the previously constructed Pond 8503C. The 89.6-acres and 44.5% Comp I are confirmed and accounted for within design of Pond 8503C. This Pond was designed within Green Valley Ranch East Regional Drainage Improvement Plans, Calibre Engineering, Inc., June 2019 (COA #217031).
- Presumes that Ponds 840 which attenuates runoff for the First Creek Watershed/Blue Grama Draw (Basin A) **WILL NOT** be constructed in advance of the mixed use development within these individual tributary basins and therefore, construction of a corresponding temporary pond on-Site will be needed, or an agreement reached allowing the Green Valley Ranch East Developer to construct Pond 840.

- In the event a temporary on-Site pond is needed, then the temporary on-Site pond will be designed and constructed at the time of the first parcel within the tributary. The temporary pond will be removed once regional Pond 840 is constructed.
- Temporary pond calculations are provided within this report and assume the full tributary development in advance of the downstream pond, however; phasing of the temporary pond may occur with updated volumes provided within subsequent Preliminary and Final Drainage Report, at the discretion of the Developer.
- This option recognizes and confirms that developed runoff from the Site within the Second Creek Watershed (Basin C) has been anticipated within the master planned Pond PG2, which will be constructed on-Site with the proposed development activities. This project's design team will work with the downstream developers, City, and MHFD as Pond PG2 undergoes design and construction to coordinate the Pond PG2 outfall off-Site to Possum Gully. Since the PG2 pond will be on-Site, only the Pond's release rate was considered as a design constraint. The maximum release rate from Pond PG2 shall meet the approved RESPEC master plan for the area of 368.8 cfs for a 100-year storm.
- On-site ponds will meet Urban Drainage and City of Aurora, FAA requirements for water quality and 100-year design while draining in 48 hours and in not less than 24-hours for the water quality volume. The total pond volume provides sufficient capacity for: Water Quality Capture Volume (WQCV), Excess Urban Runoff Volume (EURV), and detention for the 100-year storm event under proposed conditions.
- Sheet flow routed directly to the ponds is modeled in EPA SWMM as a dummy conduit with a Manning's roughness coefficient of 0.05. Detention ponds are modeled as a storage node with tabular storage and rating curves. Curves for the ponds are determined per the UDFCD UD-Detention Workbook version 4.00. Refer to Appendix B for calculated pond sizes as determined by the UD-Detention workbook.

Existing conditions were modeled for the 2-year and 100-year flood event using a free outfall for each watershed, totaling three (3) outfalls. Future conditions were modeled yielding important results for two alternate conditions: A) to provide peak flow rates to the outfall locations to the downstream regional facilities and B) to determine the potential sizing of the temporary facilities on-Site, should the downstream regional facilities not be completed at the time of development within the tributary. Any temporary ponds proposed will be removed with the development of the downstream facilities. All on-site ponds will meet Urban Drainage and City of Aurora, FAA requirements for water quality and 100-year (full spectrum detention) design while draining within 48 hours. The total pond volume provides sufficient capacity for: Water Quality Capture Volume (WQCV), Excess Urban Runoff Volume (EURV), and detention for the 100-year storm event under proposed conditions. Sheet flow routed directly to the ponds is modeled in EPA SWMM as a dummy conduit with a Manning's roughness coefficient of 0.05. Detention ponds are modeled as a storage node with tabular storage and rating curves. Curves for the ponds are determined per the UDFCD UD-Detention Workbook version 4.00. Refer to Appendix B for calculated pond sizes as determined by the UD-Detention workbook.

The temporary pond calculations within this Report assume the full tributary development in advance of the downstream ponds, however; phasing of the temporary ponds may occur with volume provided within subsequent Preliminary and Final Drainage Reports. An amendment to this Report may be required if flows are not ultimately routed to Pond 840.

#### **Variances Required**

1. One variance will be required to meet the FAA requirements for 10-year and 100-year design draining in 48 hours. The Site is within the DIA influence zone and the ponds must drain within 48 hours. The water quality drain time will not be less than 24 hours and the total drain time no greater than 48 hours.

## **D. DRAINAGE PLAN**

### **1. General Concept**

This proposed drainage plan analyzes the proposed development and estimates the developed runoff within the Project. Developed runoff is generally anticipated to flow overland to streets for conveyance to inlets and a proposed

storm sewer system. The storm sewer system will either discharge off-Site in the case of the tributary to Blue Grama Draw (First Creek) and Possum Gully (Second Creek) for conveyance to future, regional detention facilities. The storm sewer system within the Tributary T, First Creek tributary will discharge to an open channel for conveyance under 52<sup>nd</sup> Avenue and into the drainage channel system within Green Valley Ranch East. In the event the downstream, regional detention ponds within the Blue Grama Draw (Pond 840) is not completed at the time of development within the Site's tributary areas to those facilities, the Project will construct an on-Site, temporary detention Pond A for First Creek (Basin A)11. An on-Site regional Detention Pond PG2 will be constructed within the Second Creek basin (Basin C). First Creek Tributary T watershed (Basin B) has a proposed regional pond (8503C) and will collect developed flows from Basin B. Refer to Table 5 for a summary of potential pond volumes. Generally, drainage patterns will follow historic patterns and impacts to the major basin delineations will be minimized. This Master Drainage Report utilizes concept, mass grading to estimate the anticipated major basins. Minor adjustments to the grading presented herein may occur with the advancement of the individual planning areas, so long as the intent and the release rates presented herein are maintained for the three major basins.

## **2. Specific Details**

As indicated previously, the Site is located within three major watersheds; the Blue Grama Draw (a portion of First Creek) Watershed (Basin A), the First Creek Tributary T Watershed (Basin B), and the Second Creek Watershed (Basin C). As shown by the basin map in Appendix B, one temporary on-Site pond (Pond A) and one permanent pond (Pond PG2) are proposed to provide detention before routing further downstream. These detention ponds are sized to match historic runoff flow rates. The ponds will be located near the low-lying points on-Site. To prevent spending unnecessary capital, it is hopeful that downstream regional ponds and infrastructure will be constructed prior to the residential or commercial development within these individual tributary basins and therefore, construction of the temporary Pond A will not occur. Refer to Appendices for applicable inputs to the CUHP and EPA SWMM models. First Creek Tributary T watershed (Basin B) has a proposed regional pond (8503C) and will collect developed flows from Basin B. All proposed detention ponds have a 1foot minimum freeboard requirement from the 100-year water surface elevation to the spillway crest. City of Aurora considers the required pond volume to be 100yr+1/2EURV for full spectrum ponds, 100yr+1.2WQCV for detention and water quality ponds. The MHFD requirement is 1-foot minimum freeboard from the 100-year water surface elevation over the emergency weir up to the top of embankment. All pond release rates will be designed per COA 6.33 or as permitted by the previous master plans. Discharge point will be coordinated with adjacent property owners as the design progresses. The specific drainage basin details pertaining to the Site are provided below.

### **Basin A: First Creek**

The proposed layout for Basin A is broken into 4 sub-basins (A1-A3) and corresponds to the northwestern portion of the Site tributary to Blue Grama Draw and First Creek. It has a total contributing area of 56.2 acres. It was modeled with a composite imperviousness of 71.6% in the proposed condition. On-site runoff will be conveyed via overland flow, curb and gutter, and storm sewer to the proposed E. 56<sup>th</sup> Avenue crossing for attenuation within regional Pond 840. These flows will outfall ultimately into First Creek from Design Point A1 at the outfall of temporary Pond A. If Pond 840 is constructed and therefore the temporary Pond A is not required, the discharge into Pond 840 would be the inflow hydrograph shown going into the temporary Pond A. See Tables 3 – 5 below for details of the proposed pond volume, flows, and tributary area. The proposed design of the pond is in conformance with the associated Major Drainageway Plan.

### **Basin B: First Creek Tributary T**

The proposed layout for Basin B is broken into 8 sub-basins (B1-B8) and corresponds to the southwestern portion of the Site tributary to First Creek Tributary T. It has a total contributing area of 89.6 acres. It is comprised of the equivalent of basin 580 and approximately 21 acres from basin 503 from the report by Moser, 2010. It was modeled with a composite imperviousness of 44.5% in the proposed condition. Runoff in the proposed condition will be conveyed via overland flow, curb and gutter and storm sewer to the proposed open space tract in Sub-Basin B1. This runoff will flow through a reinforce concrete box culvert under East 52<sup>nd</sup> Avenue into the proposed North Channel at Design Point B\_Out as a part of the ongoing East Green Valley Ranch development to the south. Sub-basin B6 does

not discharge to design point B\_Out but does enter East Green Valley Ranch along Piccadilly. These flows will outfall into Regional Detention Pond 8503C and ultimately into First Creek Tributary T. See Tables 3 – 5 below for details of the proposed pond volume, flows, and tributary area. The proposed design of the pond is in conformance with the associated Major Drainageway Plan.

#### **Basin C: Second Creek**

The proposed layout for Basin C is broken into 4 sub-basins (C1-C7) and corresponds to the northeastern portion of the Site tributary to Possum Gully and ultimately to Second Creek. It has a total contributing area of 139.7 acres. It was modeled with a composite imperviousness of 64.8% in the proposed condition. Runoff in the proposed condition will be conveyed via overland flow, curb and gutter and storm sewer to the proposed permanent regional Pond PG2. Pond PG2 will outfall to a proposed E. 56<sup>th</sup> Avenue crossing. See Tables 3 – 5 below for details of the proposed pond volume, flows, and tributary area. The proposed design of the pond is in conformance with the 2019 Second Creek Major Drainageway Plan by RESPEC which states the peak flows at the boundary are 368.8 cfs for a 100-year storm.

Possum Gully is an ephemeral stream and runoff flows along grades ranging from one to 20 percent towards Second Creek, with slopes primarily between 1 and 3%. Possum Gully is a well-defined drainageway with a 25-ft bottom width, 15:1 and 35:1 side slope, a 25-foot depth, and longitudinal slope of 1.3% (Second Creek (Upstream of Denver International Airport) Major Drainageway Plan, September 2011). According to the 2011 Second Creek MDP, Possum Gully is in good condition with no signs of erosion. The need for grade control structures will be assessed once the conceptual plan provided herein has been preliminarily approved. All work within Possum Gully is anticipated to be by others and is beyond the scope of the development of the Site.

#### **Summary of Flows**

A map that illustrates these sub-basins designations, acreages, and directions of flow is included in the Appendix of this report. Also included within the Appendix are applicable supporting documentation, calculations, and tabular summary of CUHP and SWMM inputs and results. Tables 3 – 6 below contain a summary of hydrologic parameters and calculated flows at critical design points within the Site for the 2-year and 100-year storm events.

TABLE 3– WEIGHTED COMPOSITE IMPERVIOUSNESS

\*Ultimate condition flows are shown; assumes Pond PG2 (Basin C) and a temporary Pond A (Basin A) until Pond 840 is built. Maximum release rate at Design Point A may be 164.11 cfs per the approved Sky Dance Master Drainage Report.

TABLE 5 – POTENTIAL TEMPORARY POND VOLUME FOR PROPOSED CONDITION

POND	WATER QUALITY CAPTURE VOLUME (AF)	100-YR DETENTION VOLUME (AF)	TOTAL VOLUME (AF)	OWNERSHIP
A	1.2	7.3	7.39	PRIVATE

TABLE 6 – REGIONAL POND VOLUME FOR PROPOSED CONDITION

POND	WATER QUALITY CAPTURE VOLUME (AF)	100-YR DETENTION VOLUME (AF)	TOTAL VOLUME (AF)	OWNERSHIP
PG2	3.2	17.3	18.9	REGIONAL

The potential, temporary on-Site pond (Pond A) will be located within a proposed drainage easement as required per the City's SDC Manual, which would be vacated to allow for development once the downstream, regional facilities were constructed. Ownership (private) and maintenance of the temporary on-Site pond has been determined based on City criteria and is provided in Table 5. Further discussion and coordination with the city on this matter will be ongoing, should the temporary pond be required. Maintenance access will be provided by access roads within the temporary pond drainage easements designed per City criteria. As shown in Tables 5 and 6, each of the outfall culverts from the proposed ponds will traverse an arterial roadway and will therefore be drainageway public improvements. These culverts have been included and identified in the FDP and PIP documents for the development. Enhanced stormwater quality for each of the proposed on-Site ponds, if needed, will be provided by the Water Quality Capture Volume (WQCV) that has been incorporated into the total pond volumes.

# E. CONCLUSION

## 1. Compliance with Standards

The drainage plan provided in this report is in general compliance with the *City of Aurora Storm Drainage Design and Technical Criteria Manual* and the *Mile High Flood District, Urban Storm Drainage Criteria Manuals* (References 1 and 2, respectively), and FAA regulations. This proposed drainage plan provides recommended drainage systems that control flows to be consistent with First Creek (Upstream of Buckley Road) Major Drainageway Plan (Moser & Associates, August 2010) and Second Creek Major Drainageway Plan (RESPEC, January 2019). Additionally, design for the potential temporary detention pond has been provided, which will be implemented should the downstream, regional detention ponds not be completed at the time of development within the associated tributary.

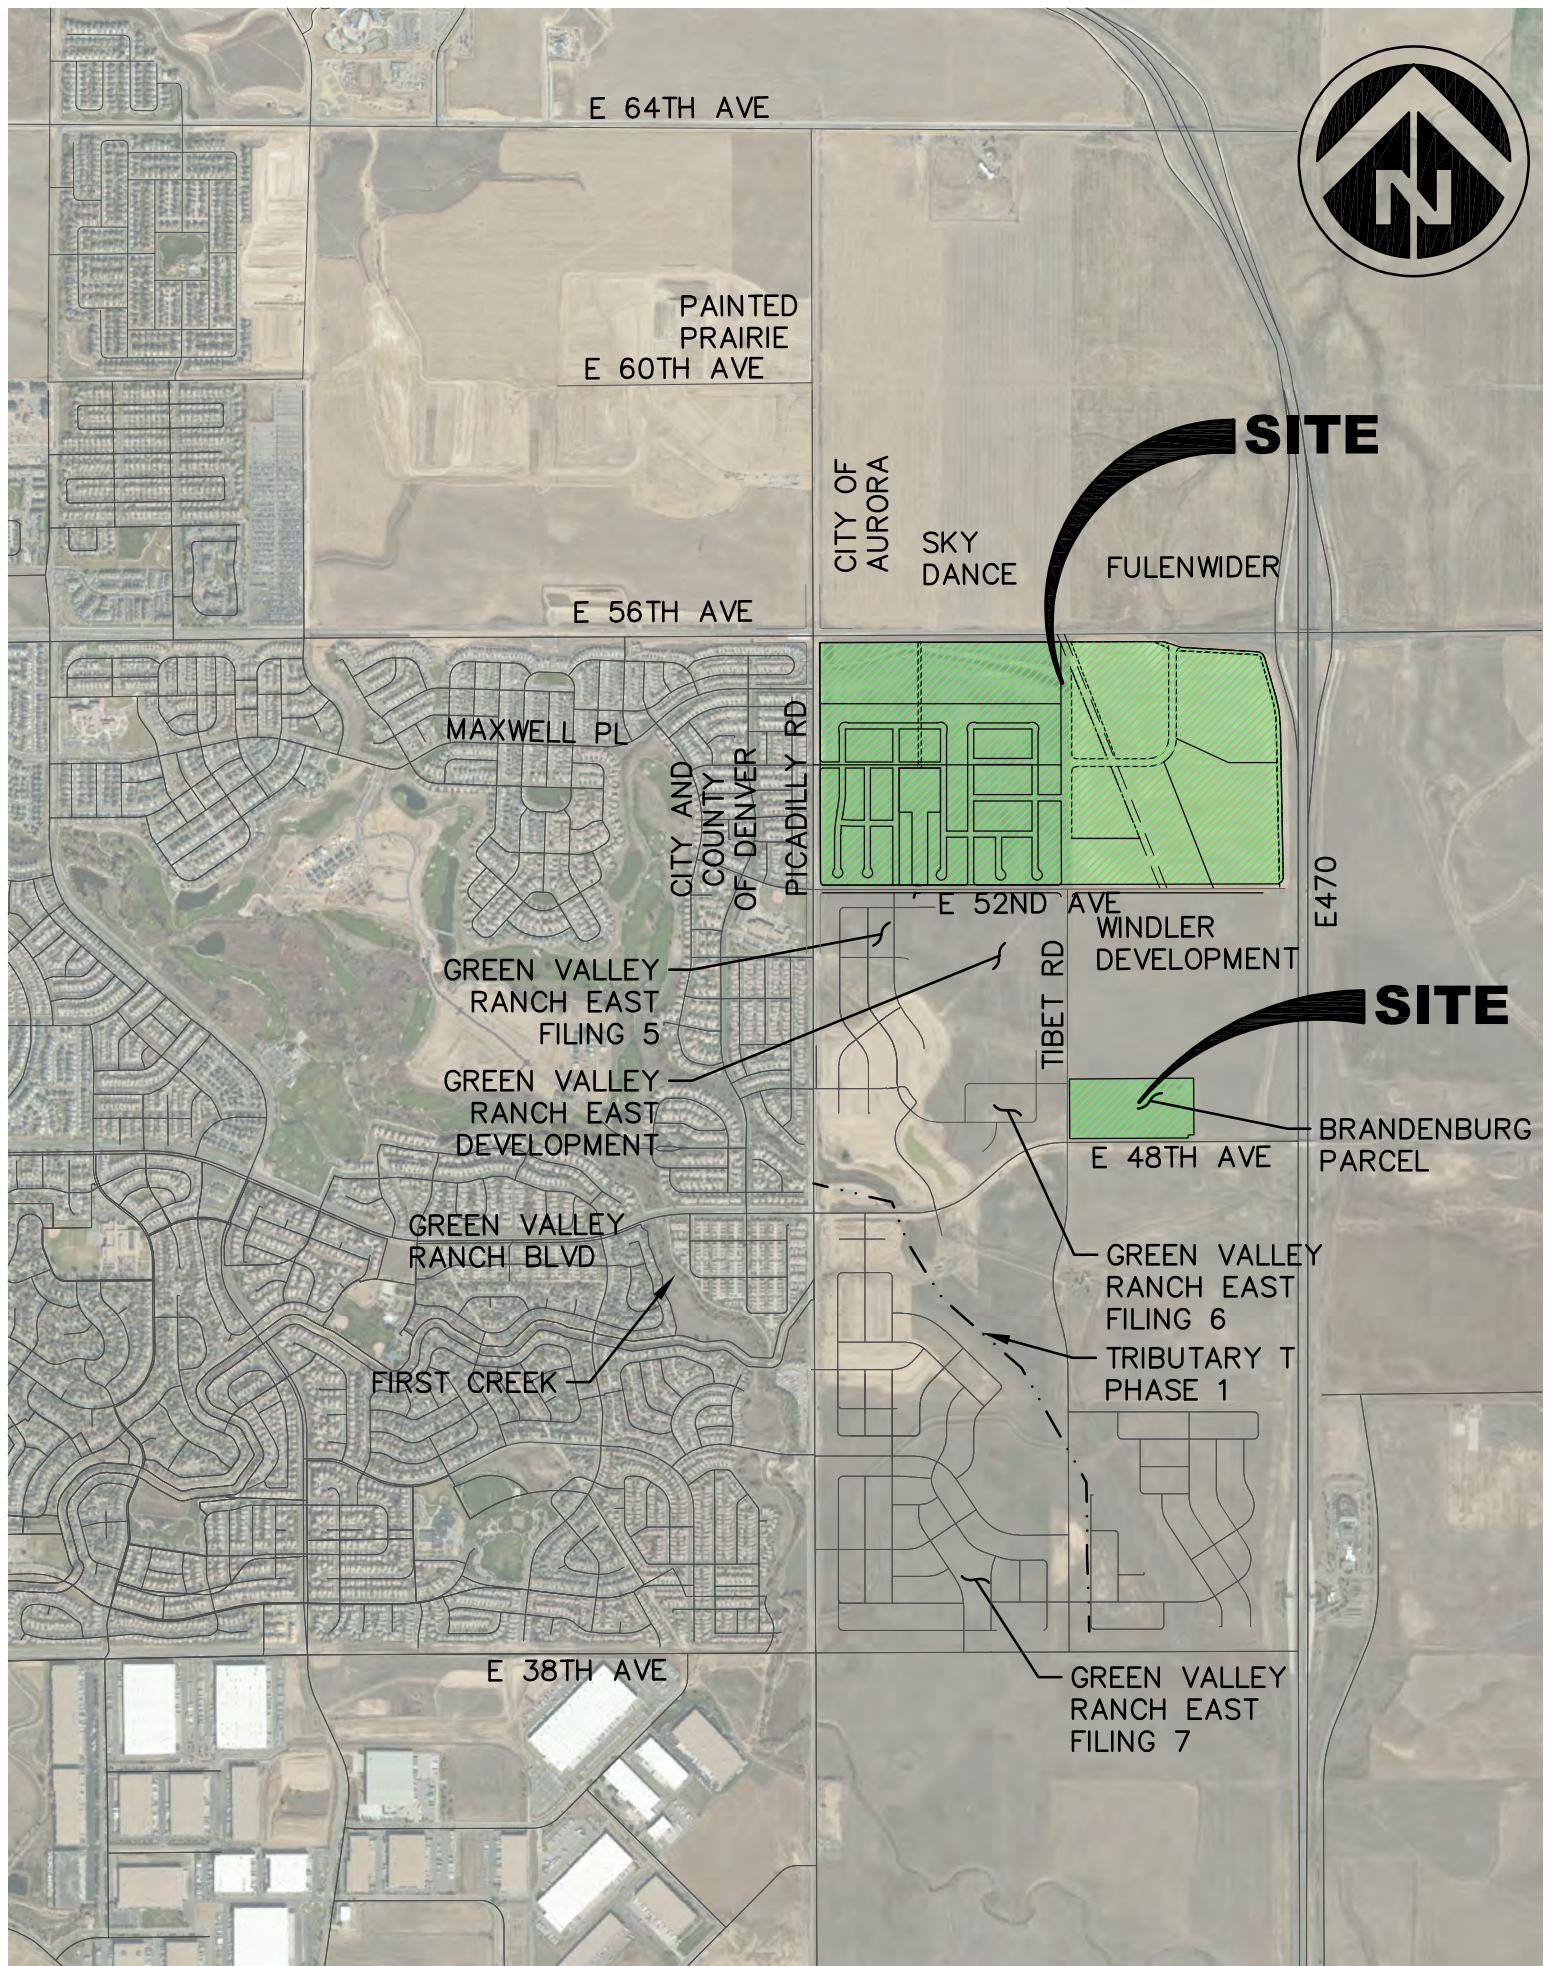

## 2. Summary of Concept

The recommended drainage plan for the Green Valley Master Plan Amendment 4 development include the following main components: one (1) temporary on-Site detention pond (Pond A) for basins draining to First Creek (Basin A) until downstream detention and improvements are in place, one regional detention pond (Pond PG2) for basins draining to Second Creek – Possum Gully (Basin C), and routing of Basin B to Region Detention Pond 8503 C and ultimately First Creek Tributary T through the ongoing East Green Valley Ranch development. The proposed plan will provide water quality and mitigate flooding impacts to the Site and downstream properties. Dewberry Engineers looks forward to future collaboration with the City of Aurora and MHFD on development of the proposed Green Valley Master Plan Amendment 4 Development.

## NOTES TO USERS

For information and questions about this map, available products associated with this FIRM including historic versions of the FIRM, how to obtain National Flood Insurance Program in general, please contact FEMA Map Information Exchange at 1-877-FEMA-MAP (1-877-362-6272) or visit the FEMA Map Service Center website at <http://lmsc.fema.gov>. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the website. Users may determine the current map date for each FIRM panel by visiting the FEMA Map Service Center website or by calling the FEMA Map Information Exchange.

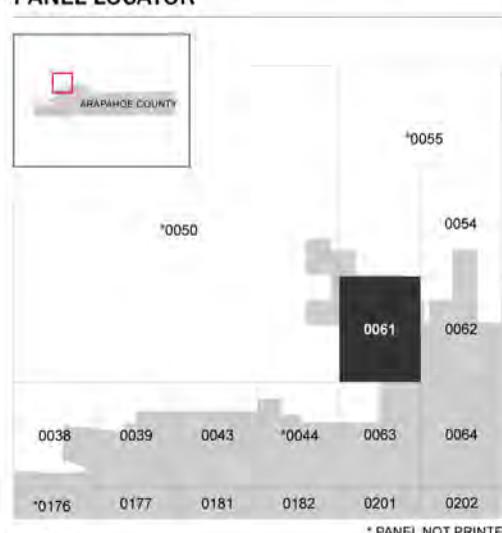

Communities annexing land on adjacent FIRM panels must obtain a current copy of the adjacent panel as well as the current FIRM Index. These may be ordered directly from the Map Service Center at the number listed above. For community and countywide map dates refer to the Flood Insurance Study report for this jurisdiction. To determine if flood insurance is available in the community, contact your insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

Base map information shown on this FIRM was provided by the Arapahoe County and Cities of Aurora and Littleton, CO depts. The coordinate system used for production of the digital FIRM is Universal Transverse Mercator, Zone 13N, referenced to the North American Datum of 1983 and the GRS 1980 spheroid, Western Hemisphere.

### MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Adams County Area, Parts of Adams and Denver Counties, Colorado

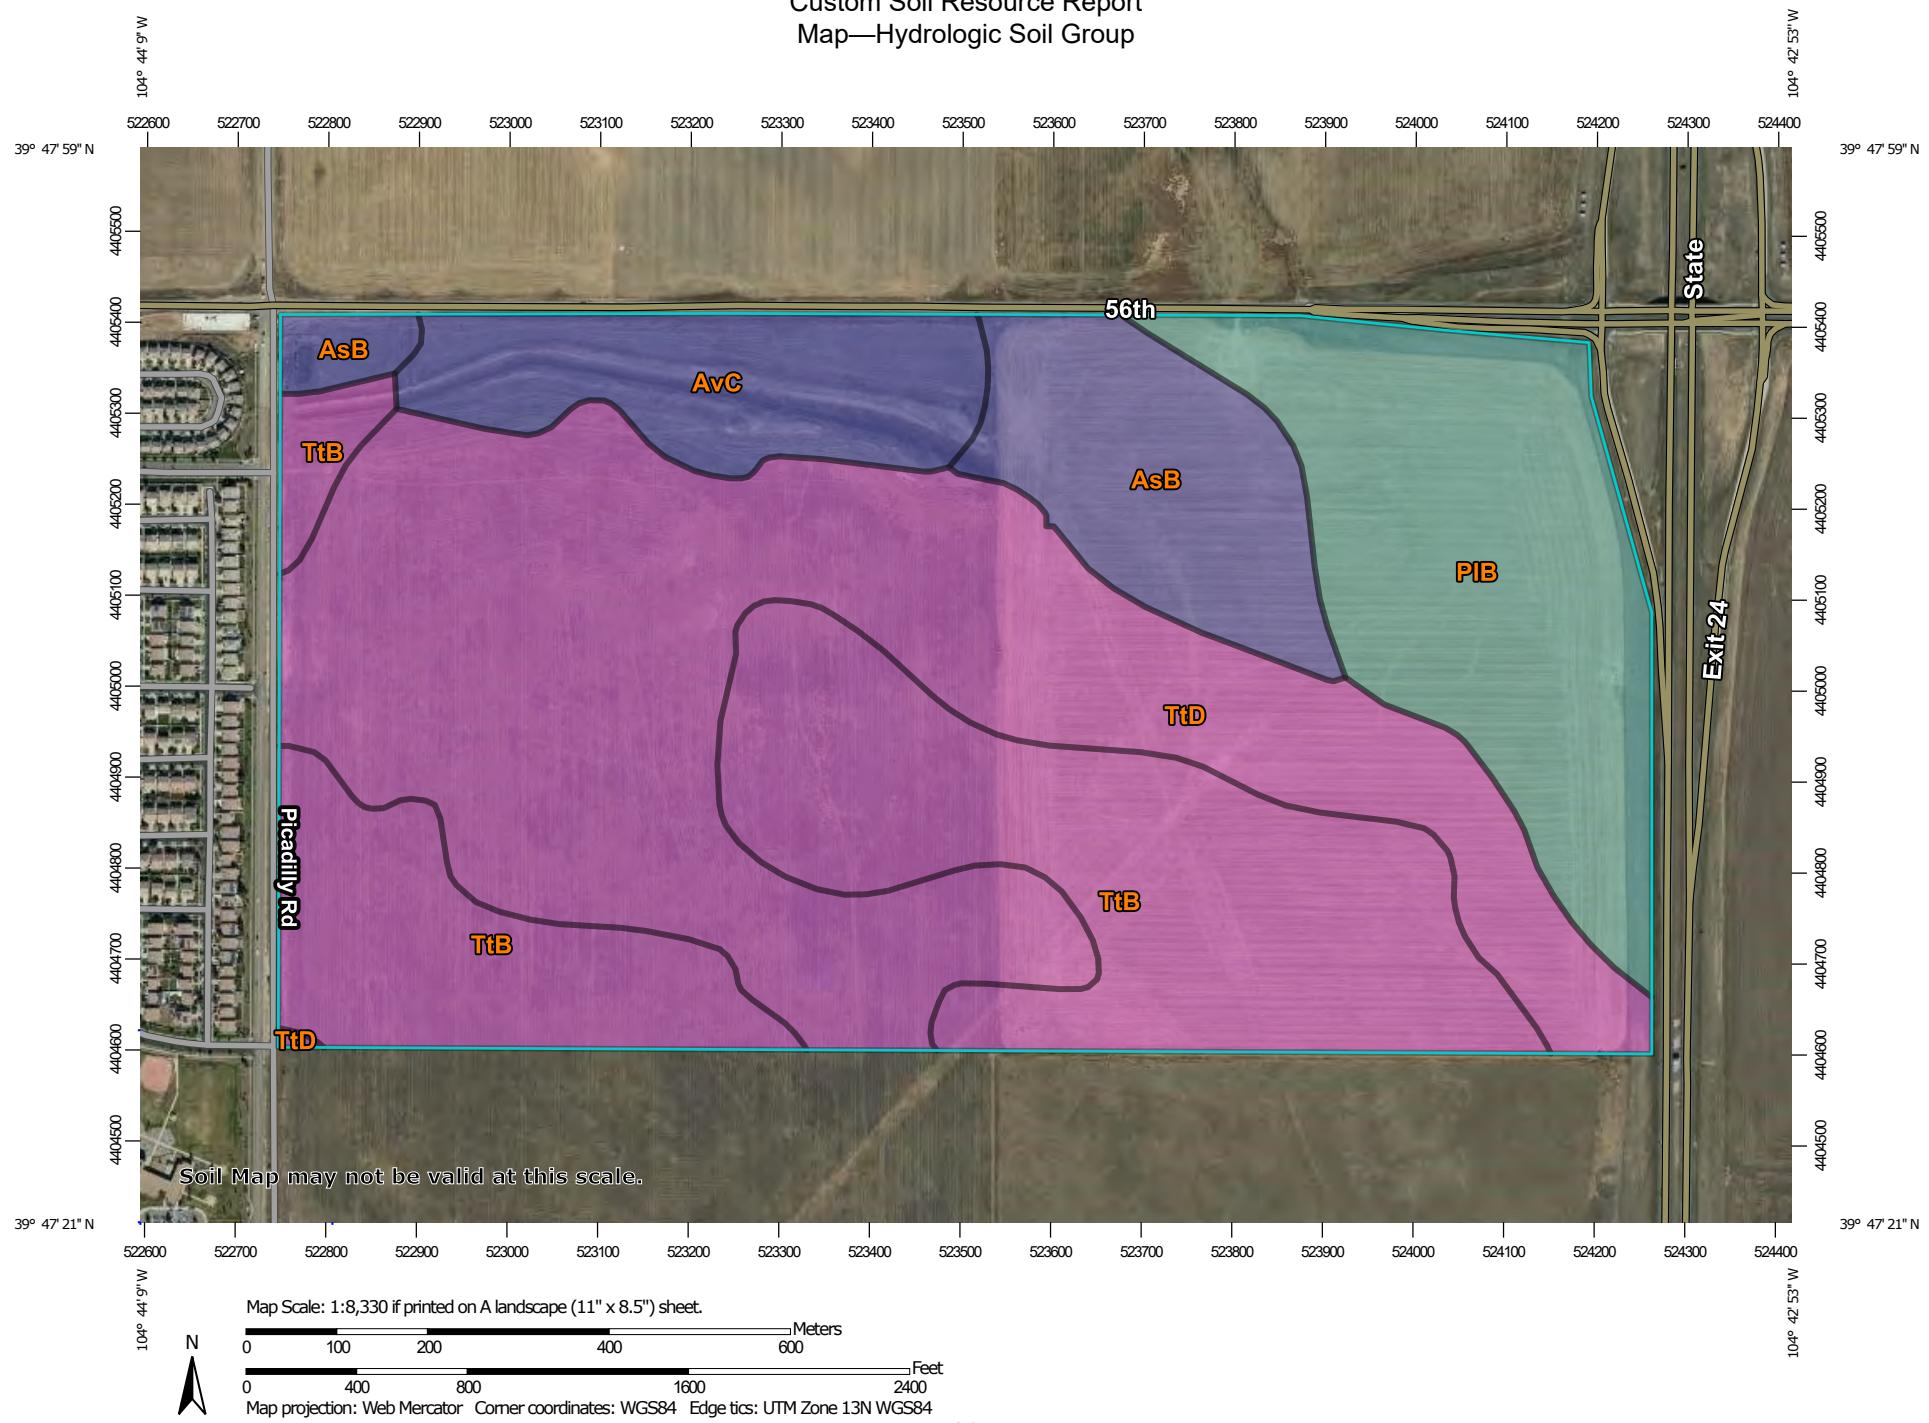

Survey Area Data: Version 18, Aug 31, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 3, 2018—Dec 4, 2018

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

### Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

## NOTES

1. THIS MASTER DRAINAGE PLAN UTILIZES CONCEPT, MASS GRADING TO ESTIMATE THE ANTICIPATED MAJOR BASINS. MINOR ADJUSTMENTS TO THE GRADING PRESENTED HEREIN MAY OCCUR WITH THE ADVANCEMENT OF THE INDIVIDUAL PLANNING AREAS, SO LONG AS THE INTENT AND THE RELEASE RATES PRESENTED HEREIN ARE MAINTAINED FOR THE THREE MAJOR BASINS.
  2. PONDS SHOWN ARE SCHEMATIC ONLY, ACTUAL SIZE, SHAPE, AND LOCATION WILL VARY AS THE SITE DESIGN PROGRESSES.
  3. IN THE CONSTRUCTED CONDITION, INTERIM PONDS WOULD BE PRIVATE. PERMANENT PONDS AND STORM SEWER IN THE ROW WOULD BE PUBLIC.
  4. AN AMENDMENT TO THIS PLAN MAY BE REQUIRED IF FLOWS ARE NOT ROUTED TO POND 840.
  5. ASSUMES THAT BASINS 503 AND 501 ARE DEVELOPED PRIOR TO THIS SITE AND FLOWS ARE CONVEYED SOUTH TO POND 8503C.
  6. IF AT THE TIME OF THE PD THE INFRASTRUCTURE DOWNSTREAM OF BASIN B IS NOT CONSTRUCTED, THE ADJACENT WNER WILL NEED TO PROVIDE A SIGNED LETTER OF ACCEPTANCE OF THE FLOWS.

**NOTE:**

# GREEN VALLEY MASTER PLAN AMENDMENT #4 PROPOSED SWMM SCHEMATIC

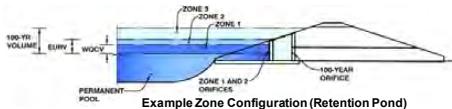

01/01/2005 00:15:00

## DETENTION BASIN STAGE-STORAGE TABLE BUILDER

*MHFD-Detention, Version 4.00 (December 2019)*

**Project: GREEN VALLEY MASTER PLAN AMENDMENT #4**

**Basin ID:** A (POND A)

#### **Example Zone Configuration (Retention Pond)**

## Watershed Information

Selected BMP Type =	<b>EDB</b>
Watershed Area =	56.20 acres
Watershed Length =	3,476 ft
Watershed Length to centroid =	1,319 ft
Watershed Slope =	0.010 ft/ft
Watershed Imperviousness =	71.60 percent
Percentage Hydrologic Soil Group A =	67.8% percent
Percentage Hydrologic Soil Group B =	32.2% percent
Percentage Hydrologic Soil Groups C/D =	0.0% percent
Target WQCC Drawn Time =	40.0 hours

Location for 1-hr Rainfall Depths = D.T.A.

After providing required inputs above including 1-hour rainfall depths, click 'Run CUHP' to generate runoff hydrographs using the embedded Colorado Urban Hydrograph Procedure.

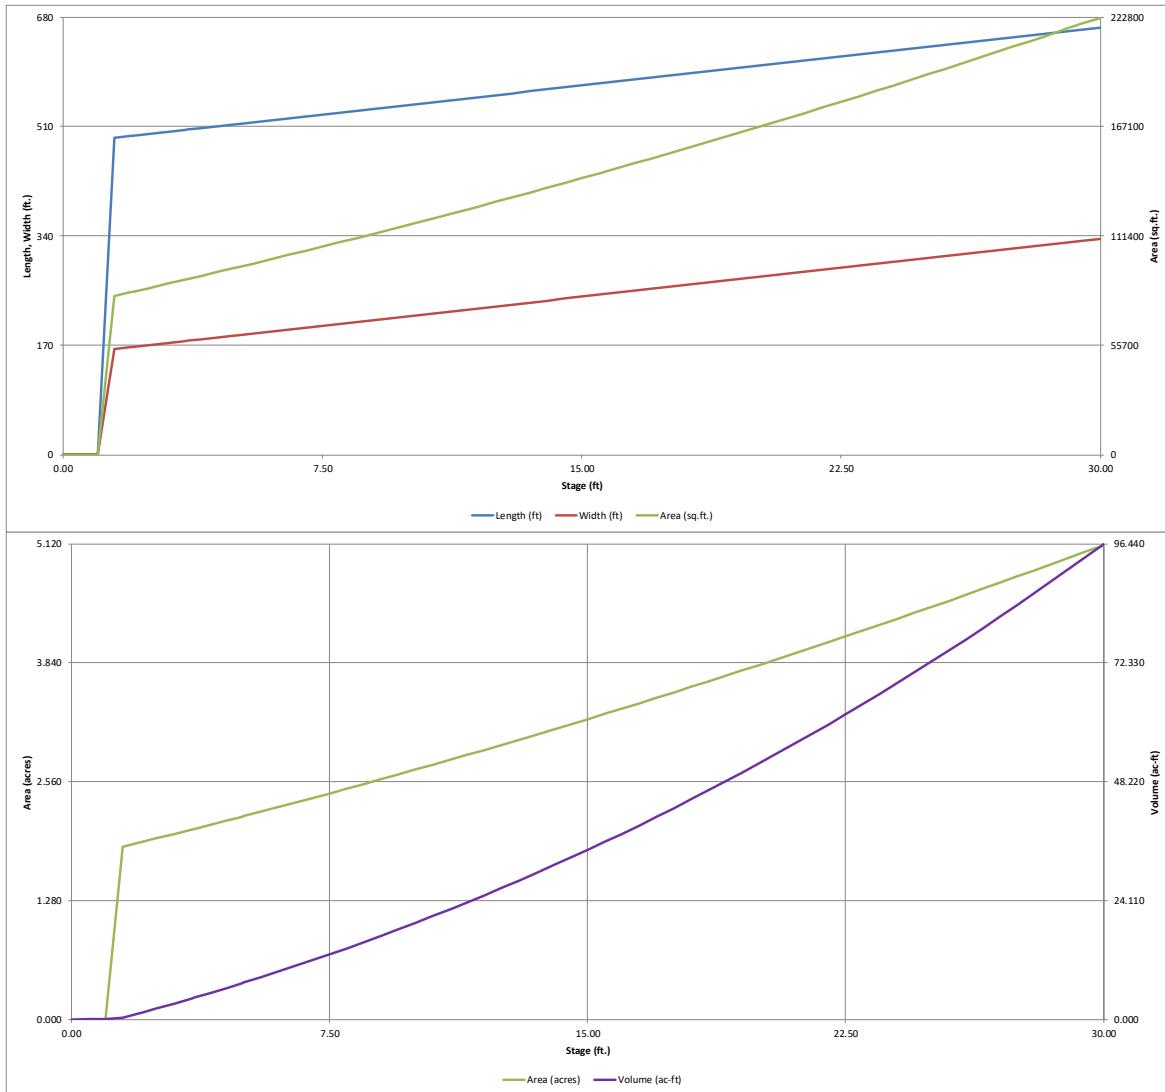

Water Quality Capture Volume (WQCV) =	<b>1,323</b>	acre-feet
Excess Urban Runoff Volume (EURV) =	<b>4,904</b>	acre-feet
2-yr Runoff Volume ( $P_1 = 0.85 \text{ in.}$ ) =	<b>2,584</b>	acre-feet
5-yr Runoff Volume ( $P_1 = 1.13 \text{ in.}$ ) =	<b>3,606</b>	acre-feet
10-yr Runoff Volume ( $P_1 = 1.39 \text{ in.}$ ) =	<b>4,571</b>	acre-feet
25-yr Runoff Volume ( $P_1 = 1.8 \text{ in.}$ ) =	<b>6,456</b>	acre-feet
50-yr Runoff Volume ( $P_1 = 2.15 \text{ in.}$ ) =	<b>8,069</b>	acre-feet
100-yr Runoff Volume ( $P_1 = 2.53 \text{ in.}$ ) =	<b>10,018</b>	acre-feet
500-yr Runoff Volume ( $P_1 = 3.55 \text{ in.}$ ) =	<b>15,000</b>	acre-feet
Approximate 2-yr Detention Volume =	<b>2,412</b>	acre-feet
Approximate 5-yr Detention Volume =	<b>3,351</b>	acre-feet
Approximate 10-yr Detention Volume =	<b>4,309</b>	acre-feet
Approximate 25-yr Detention Volume =	<b>5,634</b>	acre-feet
Approximate 50-yr Detention Volume =	<b>6,454</b>	acre-feet
Approximate 100-yr Detention Volume =	<b>7,333</b>	acre-feet

## Define Zones and Basin Geometry

Zone 1 Volume (WQCV) =	1,323	acre-feet
Zone 2 Volume (EURV - Zone 1) =	3,581	acre-feet
Zone 3 ( $100y^2 + 1 / 2$ WQCV - Zones 1 & 2) =	3,090	acre-feet
Total Detention Basin Volume =	7,994	acre-feet
Initial Surcharge Volume (ISV) =	1	ft <sup>3</sup>
Initial Surcharge Depth (ISD) =	0.50	ft
Total Available Detention Depth (H <sub>total</sub> ) =	5.00	ft
Depth of Trickle Channel (H <sub>TC</sub> ) =	0.50	ft
Slope of Trickle Channel (S <sub>TC</sub> ) =	0.001	ft/ft
Slopes of Main Basin Sides (Swain) =	3	ft/V
Basin Length-to-Width Ratio (R <sub>LW</sub> ) =	3	
Initial Surcharge Area (ASV) =	1	ft <sup>2</sup>
Surcharge Volume Length (LSV) =	1.0	ft
Surcharge Volume Width (WSV) =	1.0	ft
Depth of Basin Floor (HFLOOR) =	0.49	ft
Length of Basin Floor (LFLOOR) =	492.5	ft
Width of Basin Floor (WFLOOR) =	164.3	ft
Area of Basin Floor (AFLOOR) =	80,929	ft <sup>2</sup>
Volume of Basin Floor (VFLOOR) =	13,265	ft <sup>3</sup>
Depth of Main Basin (H <sub>MAIN</sub> ) =	3.51	ft
Length of Main Basin (L <sub>MAIN</sub> ) =	513.5	ft
Width of Main Basin (WMAN) =	185.4	ft
Area of Main Basin (AMAN) =	95,205	ft <sup>2</sup>
Volume of Main Basin (V <sub>MAIN</sub> ) =	308,777	ft <sup>3</sup>
Calculated Total Basin Volume (V <sub>TOTAL</sub> ) =	<b>7,993</b>	acre-feet

# DETENTION BASIN STAGE-STORAGE TABLE BUILDER

*MHFD-Detention, Version 4.00 (December 2019)*

BRANDENBURG PARCEL  
PA-55  
SCALE 1"=250'

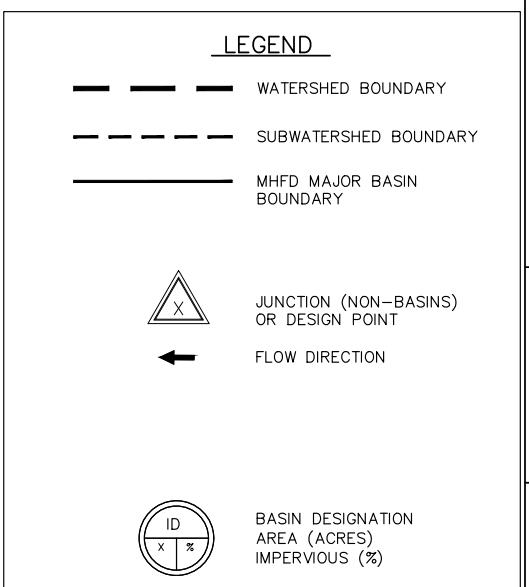

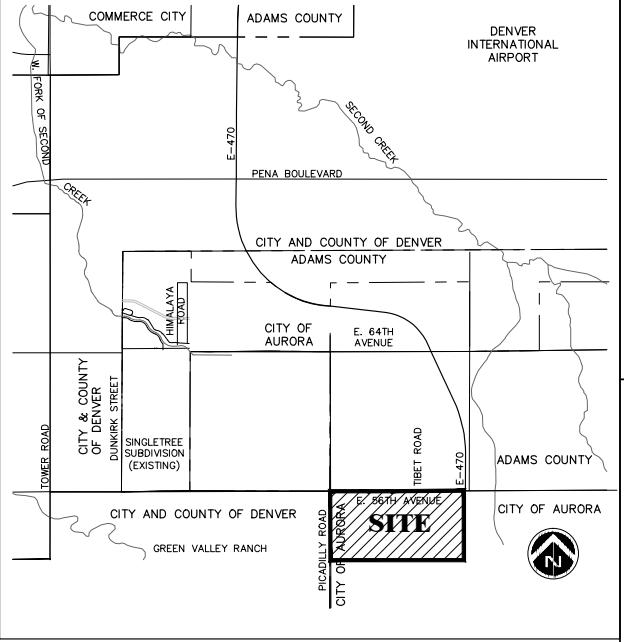

NOTE:

CITY OF AURORA PLAN REVIEW IS ONLY FOR GENERAL CONFORMANCE WITH CITY OF AURORA DESIGN CRITERIA AND THE CITY CODE. THE CITY IS NOT RESPONSIBLE FOR THE ACCURACY AND ADEQUACY OF THE DESIGN, DIMENSIONS, AND ELEVATIONS WHICH SHALL BE CONFIRMED AND CORRELATED AT THE JOB SITE. THE CITY OF AURORA, THROUGH THE APPROVAL OF THIS DOCUMENT, ASSUMES NO RESPONSIBILITY FOR THE COMPLETENESS AND/OR ACCURACY OF THIS DOCUMENT.

APPROVED FOR ONE YEAR FROM THIS DATE	
CITY ENGINEER	DATE
WATER DEPARTMENT	DATE

BASIS OF BEARINGS:  
SOUTHWEST QUARTER CORNER OF SECTION  
2 T3S, R66W OF 6TH PM BEARING  
S89°36'23"W A DISTANCE OF 2645.55'  
ELEVATION = 5424.588 (NAVD 88)

To request marking of underground facilities  
  
Know what's below.  
Call 811 or visit call811.com  
for more information

It is the contractor's responsibility to contact  
UNCC a minimum of 2 days prior to the start  
of construction operations.  
J3 Engineering Consultants, Inc claims no  
responsibility for the underground facilities  
depicted in this plan set.

**SITE BENCHMARK:**  
NATIONAL GEODETIC SURVEY CONTROL MONUMENT, DESIGNATION DVX H, BEING A STAINLESS STEEL ROD IN SLEEVE IN MONUMENT BOX STAMPED "DVX H 1995", LOCATED IN THE NORTHWEST QUARTER OF SECTION 2, TOWNSHIP 3 NORTH, RANGE 66 WEST OF THE 6TH P.M., COUNTY OF ADAMS, LYING APPROXIMATELY 623 FEET NORTH AND 6 FEET EAST OF THE WEST QUARTER CORNER OF SAID SECTION 2. ELEVATION = 5425.25 (NAVD 88)

**COA BENCHMARK:**  
CITY OF AURORA BENCH MARK, COA ID 3S6611NW002 (OLD BENCH MARK ID AD-075A), BEING A .3" BRASS DISK ON 30" STEEL PIPE IN CONCRETE, SET ON SOUTH SIDE OF 64TH AVE. IN E-W 3/STRAND BARBED WIRE FENCE, 3' WEST OF BENCH MARK IS 4' HIGH 2 1/2" YELLOW COLORED PIPE, IN THE VICINITY OF THE N 1/4 CORNER OF SECTION 11, T3S, R66W. ELEVATION = 5424.588 (NAVD 88)

POND SUMMARY							
POND ID	TRIBUTARY AREA	WCQV (AC-FT)	EURV (AC-FT)	V100 (AC-FT)	VTOTAL (AC-FT)	Q100-IN (CFS)	Q100-OUT (CFS)
A	56.2	1.2	4.4	7.3	7.3	135.6	25.9
PG2	139.7	3.2	11.1	17.3	18.9	362.0	104.0

NOTES:

1. THIS MASTER DRAINAGE PLAN UTILIZES CONCEPT, MASS GRADING TO ESTIMATE THE ANTICIPATED MAJOR BASINS. MINOR ADJUSTMENTS TO THE GRADING PRESENTED HEREIN MAY OCCUR WITH THE ADVANCEMENT OF THE INDIVIDUAL PLANNING AREAS, SO LONG AS THE INTENT AND THE RELEASE RATES PRESENTED HEREIN ARE MAINTAINED FOR THE THREE MAJOR BASINS.
2. PONDS SHOWN ARE SCHEMATIC ONLY, ACTUAL SIZE, SHAPE, AND LOCATION WILL VARY AS THE SITE DESIGN PROGRESSES.
3. IN THE CONSTRUCTED CONDITION, INTERIM PONDS WOULD BE PRIVATE, PERMANENT PONDS AND STORM SEWER IN THE ROW WOULD BE PUBLIC.
4. AN AMENDMENT TO THIS PLAN MAY BE REQUIRED IF FLOWS ARE NOT ROUTED TO POND 840.
5. ASSUMES THAT BASINS 503 AND 501 ARE DEVELOPED PRIOR TO THIS SITE AND FLOWS ARE CONVEYED SOUTH TO POND 8503C.
6. IF AT THE TIME OF THE PD THE INFRASTRUCTURE DOWNSTREAM OF BASIN B IS NOT CONSTRUCTED, THE ADJACENT OWNER WILL NEED TO PROVIDE A SIGNED LETTER OF ACCEPTANCE OF THE FLOWS.

ENSURE THAT THE PROVISIONS OF CRS 37-92-602, AS AMENDED BY SENATE BILL 15-212, REGARDING NOTIFICATION OF DOWNSTREAM WATER RIGHTS HOLDERS ARE UPHELD.

NOTE:

CITY OF AURORA PLAN REVIEW IS ONLY FOR GENERAL CONFORMANCE WITH CITY OF AURORA DESIGN CRITERIA AND THE CITY CODE. THE CITY IS NOT RESPONSIBLE FOR THE ACCURACY AND ADEQUACY OF THE DESIGN, DIMENSIONS, AND ELEVATIONS WHICH SHALL BE CONFIRMED AND CORRELATED AT THE JOB SITE. THE CITY OF AURORA, THROUGH THE APPROVAL OF THIS DOCUMENT, ASSUMES NO RESPONSIBILITY FOR THE COMPLETENESS AND/OR ACCURACY OF THIS DOCUMENT.

## DETENTION BASIN STAGE-STORAGE TABLE BUILDER

*MHFD-Detention, Version 4.04 (February 2021)*

**Project: MOFFIT/SKYDANCE**

**Basin ID: FIRST CREEK POND 840a - IMP 82%**

### **Example Zone Configuration (Retention Pond)**

## Watershed Information

Selected BMP Type =	<b>EDB</b>
Watershed Area =	110.00
Watershed Length =	4,860
Watershed Length to Centroid =	1,560
Watershed Slope =	0.014
Watershed Imperviousness =	82.00%
Percentage Hydrologic Soil Group A =	0.0%
Percentage Hydrologic Soil Group B =	68.0%
Percentage Hydrologic Soil Groups C/D =	32.0%
Target WOCV Drain Time =	24.0

Location for 1-hr Rainfall Depths = User Input

After providing required inputs above including 1-hour rainfall depths, click 'Run CUHP' to generate runoff hydrographs using the embedded Colorado Urban Hydrograph Procedure.

#### **Drain Time Too Short**

the Embedded Colorado Green Hydrometric Procedure		Optional User Overwrite
Water Quality Capture Volume (WQCV) =	2.330	acre-feet
Excess Urban Runoff Volume (EURV) =	7.424	acre-feet
2-yr Runoff Volume (P1 = 0.85 in.) =	6.080	acre-feet
5-yr Runoff Volume (P1 = 1.13 in.) =	8.479	acre-feet
10-yr Runoff Volume (P1 = 1.39 in.) =	10.883	acre-feet
25-yr Runoff Volume (P1 = 1.78 in.) =	14.808	acre-feet
50-yr Runoff Volume (P1 = 2.12 in.) =	18.118	acre-feet
100-yr Runoff Volume (P1 = 2.49 in.) =	21.867	acre-feet
500-yr Runoff Volume (P1 = 3.46 in.) =	31.460	acre-feet
Approximate 2-yr Detention Volume =	5.717	acre-feet
Approximate 5-yr Detention Volume =	7.998	acre-feet
Approximate 10-yr Detention Volume =	10.205	acre-feet
Approximate 25-yr Detention Volume =	12.208	acre-feet
Approximate 50-yr Detention Volume =	13.360	acre-feet
Approximate 100-yr Detention Volume =	14.729	acre-feet

### Define Zones and Basin Geometry

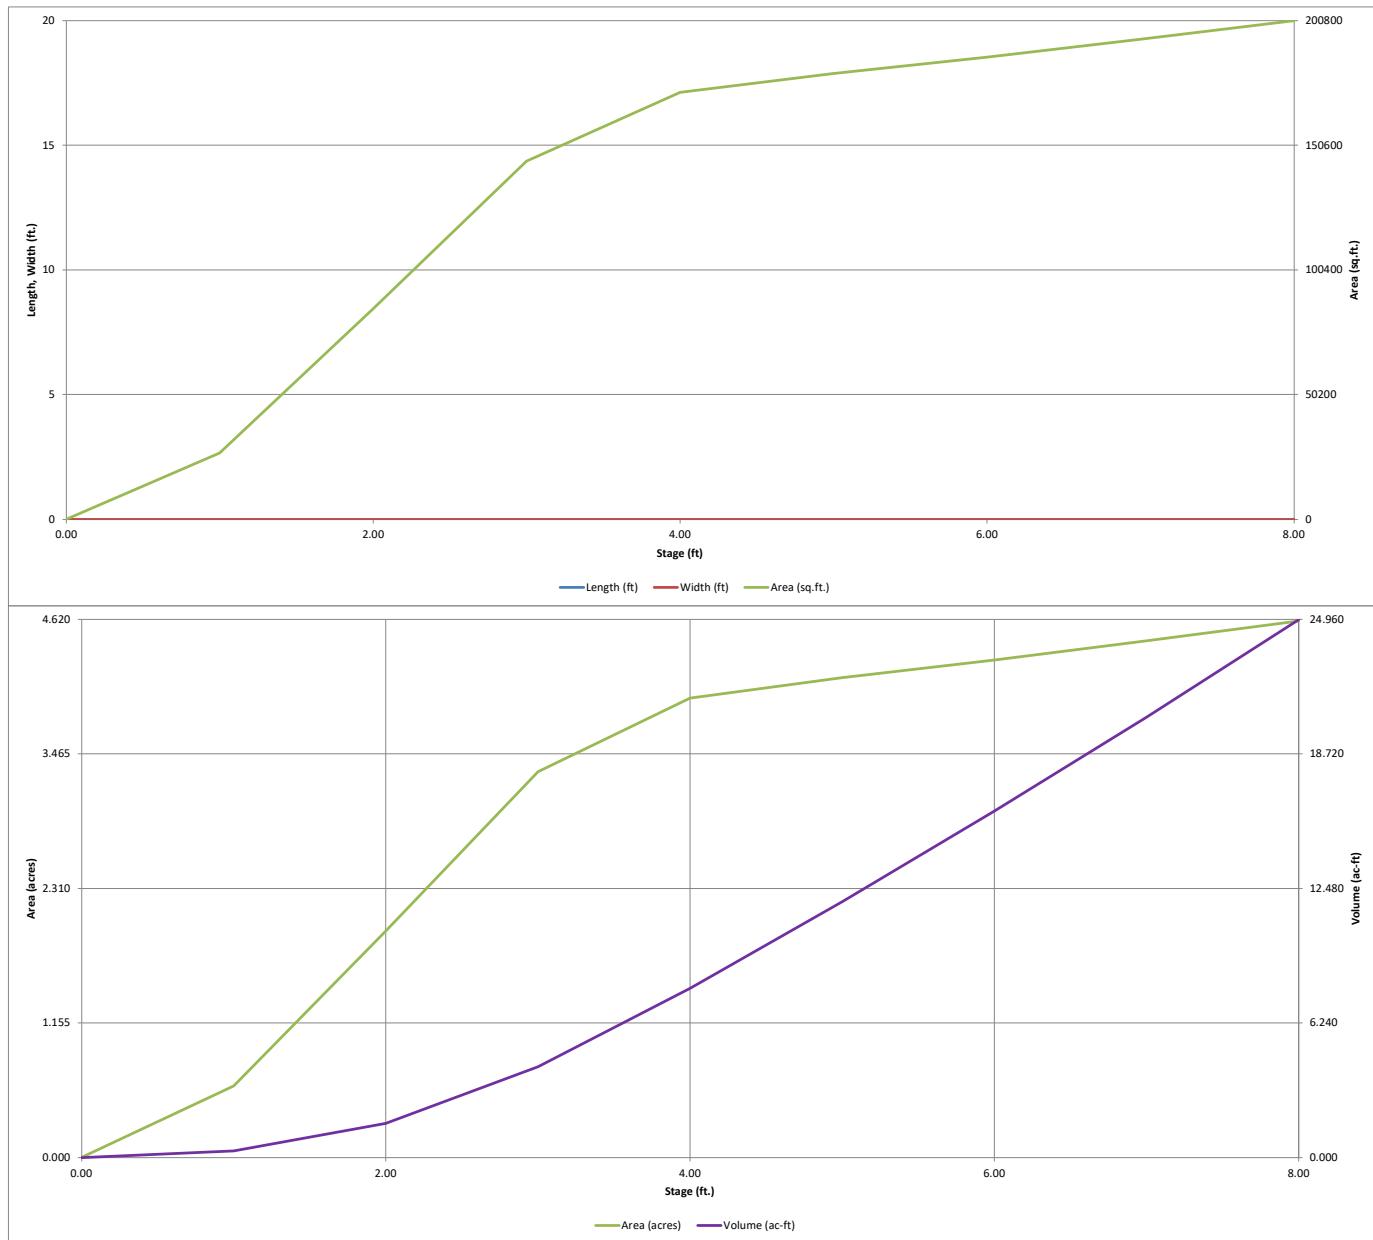

Zone 1 Volume (WQCV) =	2,330	acre-feet
Zone 2 Volume (EURV - Zone 1) =	5,094	acre-feet
Zone 3 Volume (User Defined - Zones 1 & 2) =	8,277	acre-feet
Total Detention Basin Volume =	15,701	acre-feet
Initial Surcharge Volume (ISV) =	user	ft <sup>3</sup>
Initial Surcharge Depth (ISD) =	user	ft
Total Available Detention Depth (H <sub>base</sub> ) =	user	ft
Depth of Trickle Channel (H <sub>Tc</sub> ) =	user	ft
Slope of Trickle Channel (S <sub>Tc</sub> ) =	user	ft/ft
Slopes of Main Basin Sides (S <sub>main</sub> ) =	user	H:V
Basin Length-to-Width Ratio (R <sub>l/w</sub> ) =	user	

## **100-YR VOLUME DETERMINED BY SWMI**

Initial Surcharge Area ( $A_{ISV}$ ) =	<input type="text"/>	ft <sup>2</sup>
Surcharge Volume Length ( $L_{ISV}$ ) =	<input type="text"/>	ft
Surcharge Volume Width ( $W_{ISV}$ ) =	<input type="text"/>	ft
Depth of Basin Floor ( $H_{FLOOR}$ ) =	<input type="text"/>	ft
Length of Basin Floor ( $L_{FLOOR}$ ) =	<input type="text"/>	ft
Width of Basin Floor ( $W_{FLOOR}$ ) =	<input type="text"/>	ft
Area of Basin Floor ( $A_{FLOOR}$ ) =	<input type="text"/>	ft <sup>2</sup>
Volume of Basin Floor ( $V_{FLOOR}$ ) =	<input type="text"/>	ft <sup>3</sup>
Depth of Main Basin ( $H_{MAIN}$ ) =	<input type="text"/>	ft
Length of Main Basin ( $L_{MAIN}$ ) =	<input type="text"/>	ft
Width of Main Basin ( $W_{MAIN}$ ) =	<input type="text"/>	ft
Area of Main Basin ( $A_{MAIN}$ ) =	<input type="text"/>	ft <sup>2</sup>
Volume of Main Basin ( $V_{MAIN}$ ) =	<input type="text"/>	ft <sup>3</sup>
Calculated Total Basin Volume ( $V_{TOTAL}$ ) =	<input type="text"/>	acre-feet

Notes:

1. The pond storage volume is pasted in from the UD Detention worksheet.
2. The volume is taken from the routed SWMM model and the elevation is interpolated from the calculated volume.

Notes:

1. The WSE for each event is interpolated from the routed SWMM pond release rate and the discharge curve above. This is compared to the volume interpolated elevation.
2. The discharge curve is based on submerged weir calculations from the Pond C Weir sheet.
